St Louis [illegible] 1853

R. H. Wilson Esq.

Dear Richard:

135 Locust St. Philadelphia, 28 Nov. 18

Dear Sir:

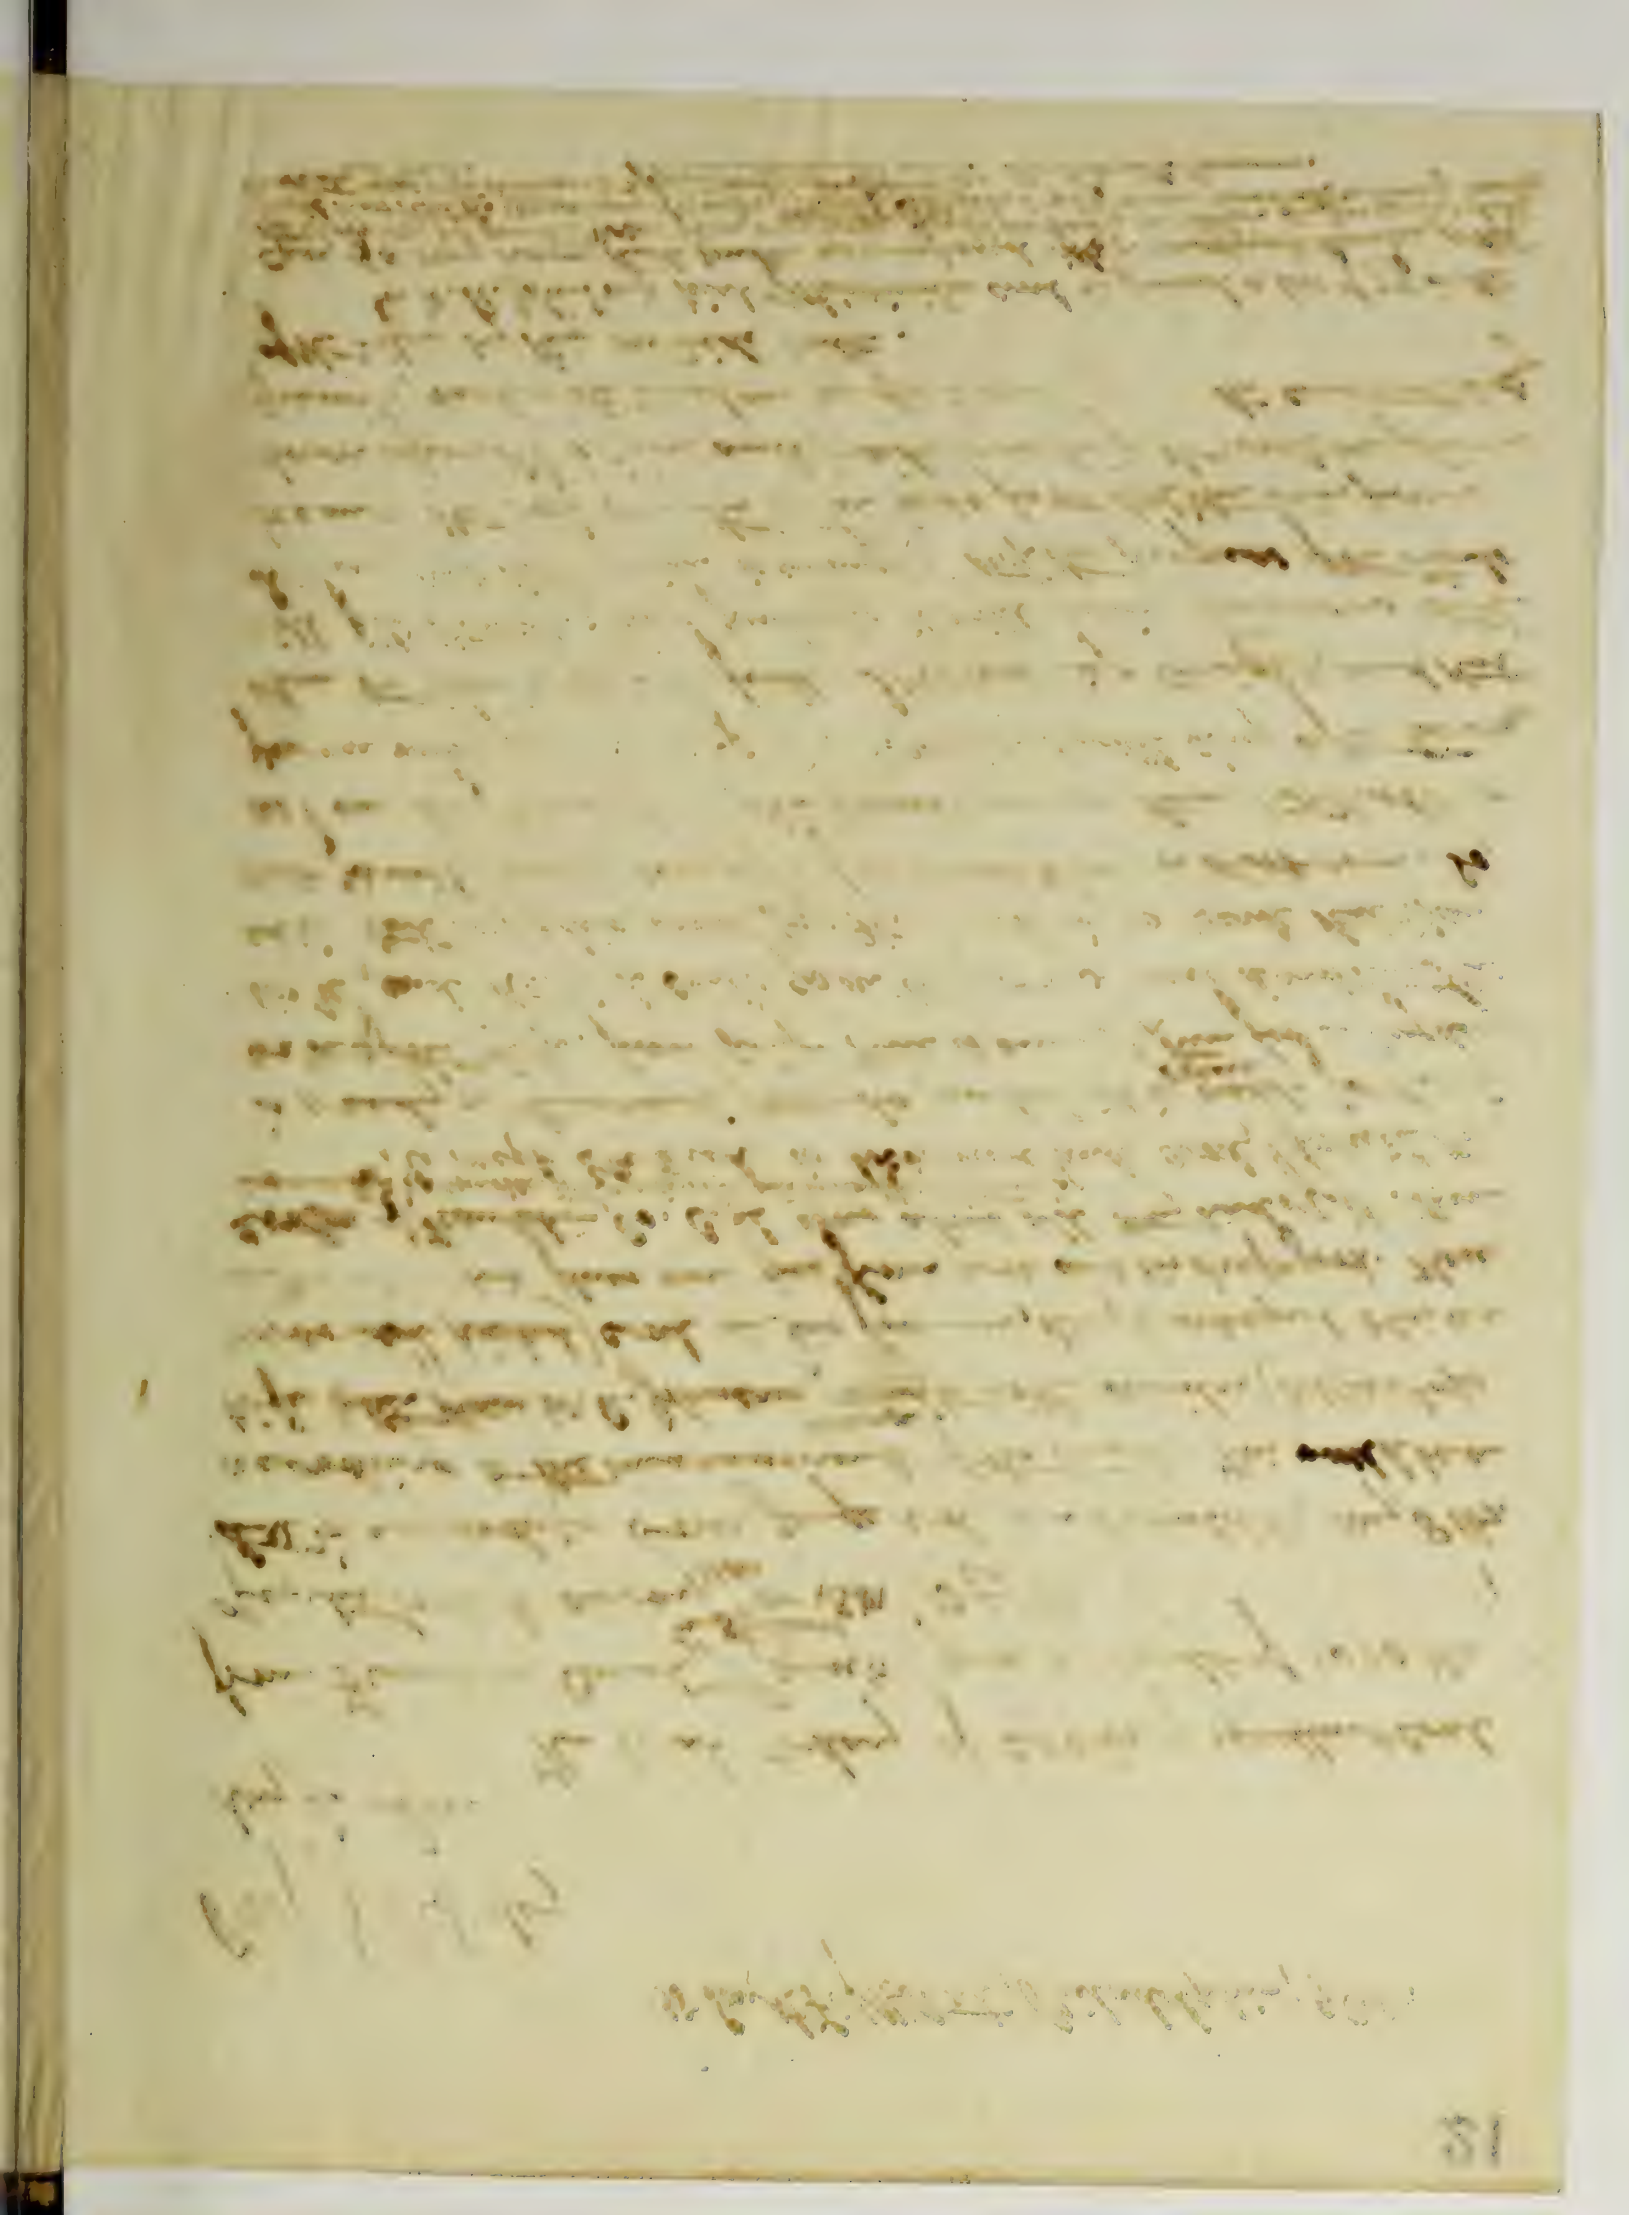
I shall not be able to call on you personally before I leave the City, but I shall be glad to receive a few lines from you, and shall be glad to see you in Boston. Mrs. Bacon is interesting and your marginal notes will be of great interest.

I shall be at home all day and shall be glad to see you at dinner if you can come.

I remain, with kind regards,

Yours truly, Francis Bacon

Respectfully yours,
Benj. Franklin.



135 miles 17th Street Cincinnati Ohio 11 Sept 63

Mr. J. Fowler.

Sir:

The trial today resulted in boiling away 1455 lbs. of water with 182 lbs. of coal or the amount from dean evaporating 8 lbs. of water with 1 lb. of coal; all done with Reil's evaporator with the same tubes and fire as used in the regular test tomorrow and will be continued in daily by that time by means of the Fowler Test plate and the evaporator is removed this Reil can be tested with the same coal, same fire, same feed water, same draft and same engineer, with interchanging of the evaporators.

I have given the idea of the Fowler Test plate, and make some slight alterations in the plate, which would be necessary, and I am ready to demonstrate of such efficiency. I however, as they do not employ me directly. I have had some correspondence, when I came to Cincinnati with Mr. Reil and have known him for some time, I would be glad if I was an Engineer and have had some conversation with Mr. Reil, that will have a very high opinion of his ability as an engineer. Should you desire any information in regard to Mr. Reil you can address me at this place.

Yours.

Assistant Engineer.

135 South Fifth Street Philadelphia, 4 Sept. 1871.

James Forrest Esq.
Sec'y of the Institution of Civil Engineers
Great George Street Westminster.

Dear Sir:

Your Journal of one of the twenty-eighth of last month is at hand, and I give my pleasure extend you in return for numbers of the American Journal of Mining, namely those of the 22d of July the 5th, 12th and 19th of August which contain the whole of [illegible] Mining Schools. Here is no Beginning, I can little [illegible] baby be new to you to answer the inquiries of your circular. The general system of engineering education (apart [illegible] mining) is in America chiefly in the Civil Scientific Schools or [illegible] States, it is by without Government assistance. The courses of study and [illegible] are well known and only [illegible] to all officers. These Schools give a [illegible] fair mining, but our laws do not require [illegible] before a man may practice as an engineer. The principal engineering Schools that I know are: the Rensselaer Polytechnic [illegible] Troy, New York; the Lawrence Scientific School and the School of Mines and Practical Chemistry [illegible] Cambridge Massachusetts; the Sheffield Scientific School of Yale College [illegible] Connecticut; the Columbia School of Mines City; the Technological Institute Boston, Massachusetts. Among these schools each of them, other students pursue engineering studies are taught. Many engineers have never studied at these schools but have gained their knowledge by serving with a practicing engineer, and this was often in former years. I know nothing of the fees in such cases; but imagine these are seldom in general but that the learner is paid for his services in proportion to his value. With regard to [illegible] any body in this country is supposed to assume the title and title of civil engineer [illegible] he [illegible] that of blacksmith, and [illegible] may [illegible] rule of different. Prof. S. Edmund Lyon [illegible] Rensselaer [illegible] Troy, [illegible] [illegible] [illegible] [illegible]

135 South Eighth Street, Philadelphia, February 8th.

[illegible] Smith & Fifth Street, Philadelphia, 6th Mo. 4th 1861.

Prof. J. P. Lesley,

Dear Friend:

350 pounds of Penna Coal today boiled away 3353 pounds [illegible] Friday to gauge rods in eleven hours; or 9½ pounds per hour of coal. This is four thirds of a pound per hour each hour. Carl Hartley [illegible] day of closely similar quality. He assistant Abel Mark Hartley [illegible] for each hour today to char & work in the files of the boiler, [illegible] he is using N.C. Penn. coal and by the same coal again [illegible]. He finds it [illegible] with Penn in fixing up, and by [illegible] have artificial draught [illegible] apparently equal to Lancashire [illegible] Mr. Reid was not by at the trial today.

I am very glad to learn through Count Inman today that [illegible] will be assembled here on meeting night at [illegible] all time.

[illegible] have heard through C. E. Clark, who got it from [illegible] Prof. Henry will [illegible] Send you and Dr. Lesley [illegible] a little about the catalogue; but I cannot learn [illegible]

Thine affectionately yours,

Benj. Smith Lyman.

1335 Locust St. Philadelphia, Oct. 16th

Mrs. S. J. Darling.

My dear friend:

I was very welcome [illegible] & cordially & cordially & cordially received and entertained one week.

Since [illegible] Mr. Darling and I have been [illegible] the [illegible] but [illegible] [illegible] [illegible]

135 Steed St. Phila. 17 Feb.
1875.

Prof. J. Peabody.

My dear Sir:

[illegible] rounds of the Beam Creek today [illegible] scarcely 35 1/2
[illegible] in [illegible] rounds, or a little over [illegible] rounds
[illegible] 35 [illegible] and about five per cent: better than yesterday's
[illegible] Mr. [illegible] himself was present and a minute
[illegible] today, as [illegible] yesterday. Record the improvement
[illegible] his clearing [illegible] flues this morning and removing
[illegible] impossible from them. But the morphine [illegible]
[illegible] fire in the bathhouse stove heat, for
[illegible] the [illegible] correspondence with Edinburgh who
[illegible] for [illegible] quarter hour and attend
[illegible] [illegible] [illegible] three seconds of [illegible]
[illegible] [illegible] yesterday. He [illegible] would fall off very
[illegible] [illegible] during [illegible] for it often [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible] and [illegible]
[illegible] [illegible] [illegible] [illegible] Creek, while the Pa
[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] better than
[illegible] [illegible] although [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] made a discovery today, which I may [illegible]
[illegible] [illegible], and which consisted in [illegible] I had done days
[illegible] and again yesterday. The [illegible] of the donkey, hemp [illegible]
[illegible] [illegible], also for [illegible] well and [illegible] [illegible] of the trouble
[illegible] [illegible] [illegible] [illegible] when the boiler was fed by the injector the valve in the
[illegible] [illegible] would [illegible] one of these [illegible] closed, all that was
[illegible] [illegible] [illegible], but was that the pump feeds the boiler this valve is often
[illegible] closed. Now, this morning after beginning [illegible] trial both
of these valves were shut for about ten minutes [illegible] in the tank
did not fall in the least [illegible] formerly, when the injector was in use, the water in
the tank had a [illegible] it was called, which could only be explained by
some reading of the [illegible] the tank and hardly by that; and this [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]
the impurities that [illegible] [illegible] [illegible] [illegible] gave an average of the first
four hours 35 pounds higher than the corresponding hours today; and the continued
[illegible] in the same four hours the day before that amounted 116 [illegible] more than those four hours
[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

135 South Fifth Street Philadelphia Sept. 1

James M. Brainard Esq.

My dear Sir

I have had a chance to work a little today on the [illegible] in cool blood, and hasten to correct a false impression by my letter from Pittsburgh. I see by the map in the present condition that the [illegible] cool beds, Nos. 1, 2, 3, 4, 5, 6, old drift near the Northeast corner of the [illegible] contains a portion of the Sewickley. The ground lies so low in [illegible] that this bed rising westward crops out [illegible] be under [illegible] considering that Nos 1 is an unknown but probable [illegible] thickness of loose drift upon the land, it is evident [illegible] for and lies upon the surface of the ground, [illegible] does not [illegible] underlie more than one or two acres of the tract. The [illegible] bed, No. 1 B, however no doubt underlies the whole. [illegible] is the only bed upon which [illegible]. The present depth [illegible] is about seventy feet, it seems. I am more than [illegible] that the Sewickley beds found near the northeast [illegible] and that the one at the old drift near the northeast corner of the Coal No 1 C, and not the same [illegible] near the north west [illegible] at the Diamond Mines; and that the dike is entirely cross [illegible] instead of running [illegible] through the middle of it.

The coal and [illegible] will probably be finished next week. I [illegible] that the delay is putting you to [illegible] inconvenience, I am,

My dear Sir,

Very truly yours.

Benj. Smith Lyman.

135 York & Fifth Street, Philadelphia, April 6. 1865.

[illegible]

[illegible]:

In reply to your letter of [illegible] and [illegible] received, I have to say that I am [illegible]. My duty [illegible] to [illegible] of Mines & the Mine Inspector, as [illegible].

I have [illegible] from Hon. Sec'y dated [illegible] and [illegible] will not positively [illegible] [illegible] if not [illegible]. We [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

Very truly yours,

Benj. Smith Lyman.

Dr. Smith's, Philadelphia, 22 Oct. 1.

Prof. J. P. Lesley.

My dear Sir:

Yesterday morning the experiments were begun again, but I was disappointed that no one was present before I started from home. Not knowing no coal pit would be delayed. To Shenandoah, and about a mile West, where we change horses, the Richmond train passes through, Mary Hall and Dr. Lee's office just to left and Hall's store to the right of the road. This morning opened fair but soon [illegible] Dr. Lee's office just as I arrived at Pottsville from the direction of Girardville, and [illegible] Dr. Lee was not in — he [illegible] I [illegible] Dr. Lee's office until [illegible] Dr. Lee's office [illegible] Dr. Lee's office [illegible]

On arriving this evening Mr. Fisher was present. He said he had been at home a fortnight. He feels sure that it [illegible] Mr. Lee will be [illegible] here. Mr. Lee [illegible] Mr. Fisher is desirous of the specimens and also several other [illegible] and though smaller in number than usual [illegible] meeting, had an agreeable meeting and [illegible] about eleven

Give my love to Aunt Sue and Mr. Childs and family and believe me ever

Affectionately yours.

Benj. Smith Lyman.

Yours very truly,

Benj. Smith Lyman.

135 S. 12th St. Phila. Pa. Feb. 6th 1878

Dear Sir,

Mr. Cramer Coal was tried today, and 16 pounds and 1630 pounds of steam in 5½ hours; or 10.6 pounds of steam per coal, and 478/11 lbs. of steam an hour.

The sample of Broad Top coal is to be tried, and then my supply. Both this and the Cumberland are used [illegible] ... [illegible] ... [illegible] ...

I say again that will give me great pleasure to see you as soon as
I can, and if you should come my house you and

135 Pine Street, Philadelphia.
28th Sept. 1[illegible].

[illegible]

I have received today of two or three friends and [illegible] Mr. Rhoads [illegible] Mr. Rhoads [illegible] Mr. Rhoads

for a good Woman [illegible]. Perhaps you might like to [illegible] and prove satisfactory, if you [illegible] it in case [illegible] me.

I would probably be [illegible] for you, if you [illegible] Receipts to remit to [illegible] you [illegible] Bank Notes of Pittsburgh and [illegible] through Phila. [illegible] in your own name and [illegible] Remit you could also [illegible] Bills if you thought fit, and could [illegible] Writing. You could probably get Letters from [illegible] to this one that would be [illegible] you at Rochester and perhaps at Lewiston, Niagara Falls, Utica; and at these places and [illegible] your way [illegible] at Pittsburg and [illegible] Harrisburg, Philadelphia, Reading, [illegible] New York, at [illegible] miles from this City and Delaware and could perhaps introduce you [illegible] as Teacher [illegible] Young Men [illegible] Superintendence of [illegible] Institute. After the Term [illegible] If you thought [illegible] [illegible] you might [illegible] on your way [illegible] Lewiston, Utica, Rochester, Albany, Troy, [illegible] Boston. If you [illegible] Rochester, Albany, Troy, [illegible] Boston, [illegible] Rochester, Albany, Troy, [illegible] Boston, [illegible] Rochester, Albany, Troy, [illegible] Boston,

Ashley 18 Sept 1854.

My Dear Mrs Higgs.

[illegible] I am very glad to hear from you [illegible] I am sorry to hear that you have been so unwell, and I hope that you will soon be quite well again. I am very glad that you have been able to get [illegible] I am sure that you will be very happy there. I am very glad that you have been able to get [illegible] I am sure that you will be very happy there.

[illegible]

[illegible] Philadelphia, [illegible]

[illegible]

Dear Sir,

[illegible] of the month's duty of paying [illegible] for me to be upon [illegible] that many of us [illegible] paying the [illegible]. I would make [illegible] as far as to say as [illegible] three dollars and the necessary [illegible] [illegible], [illegible] [illegible] and [illegible] [illegible] [illegible]

[illegible] 8th Fifth Month, Philadelphia, 8 mo. 68.

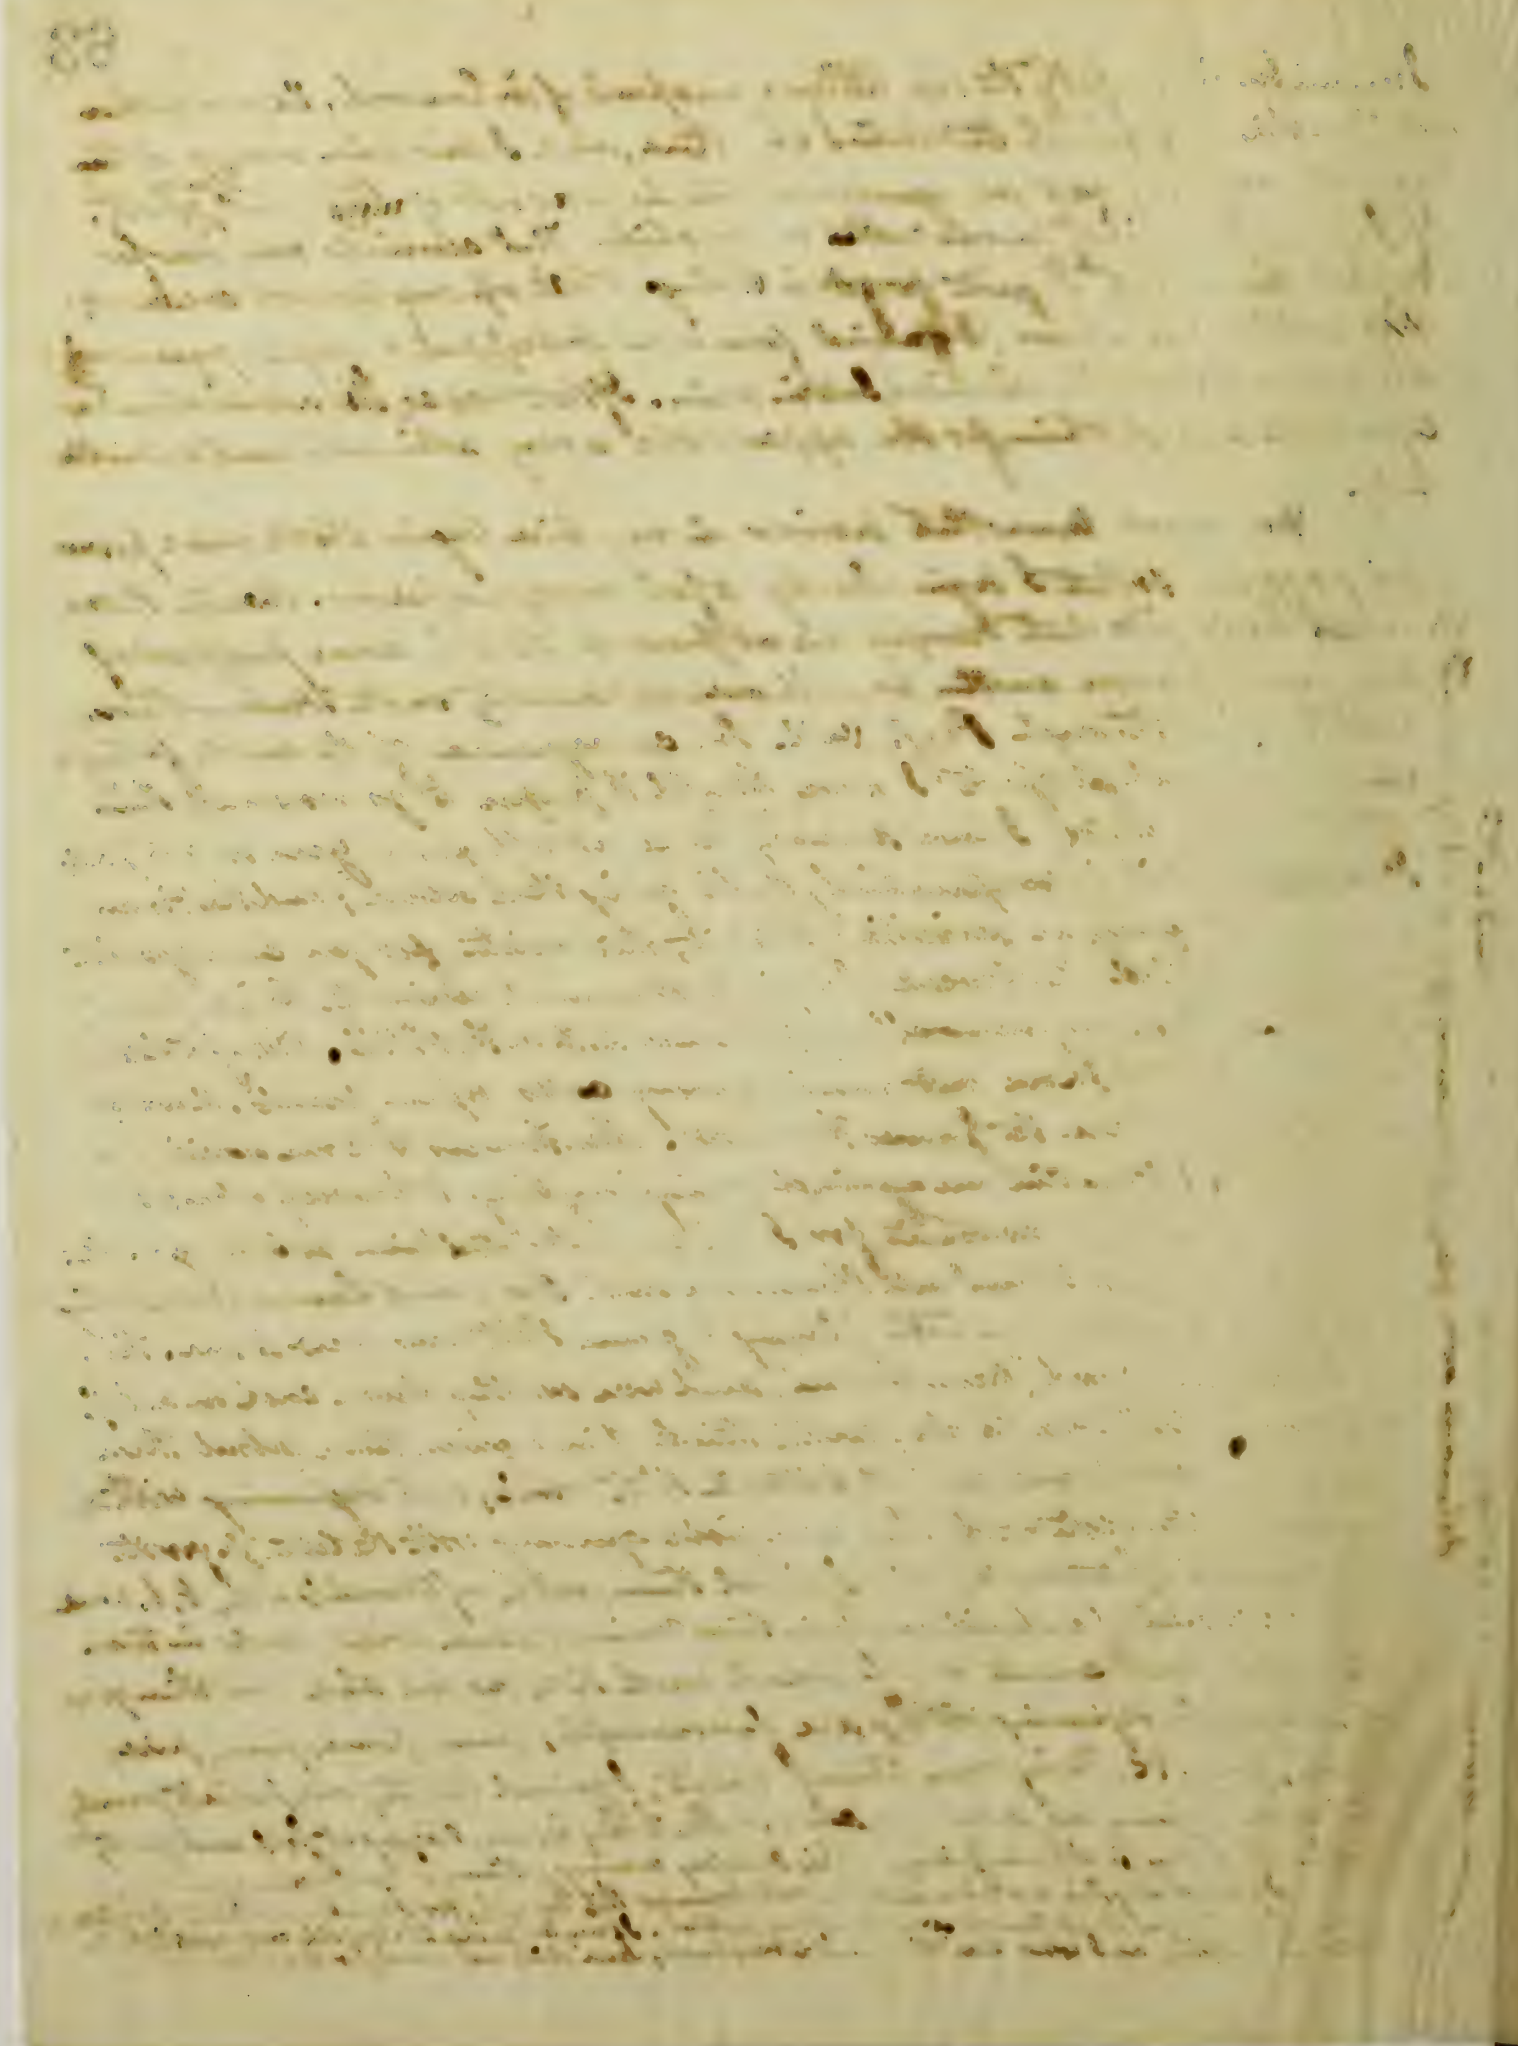
Dear Mary,

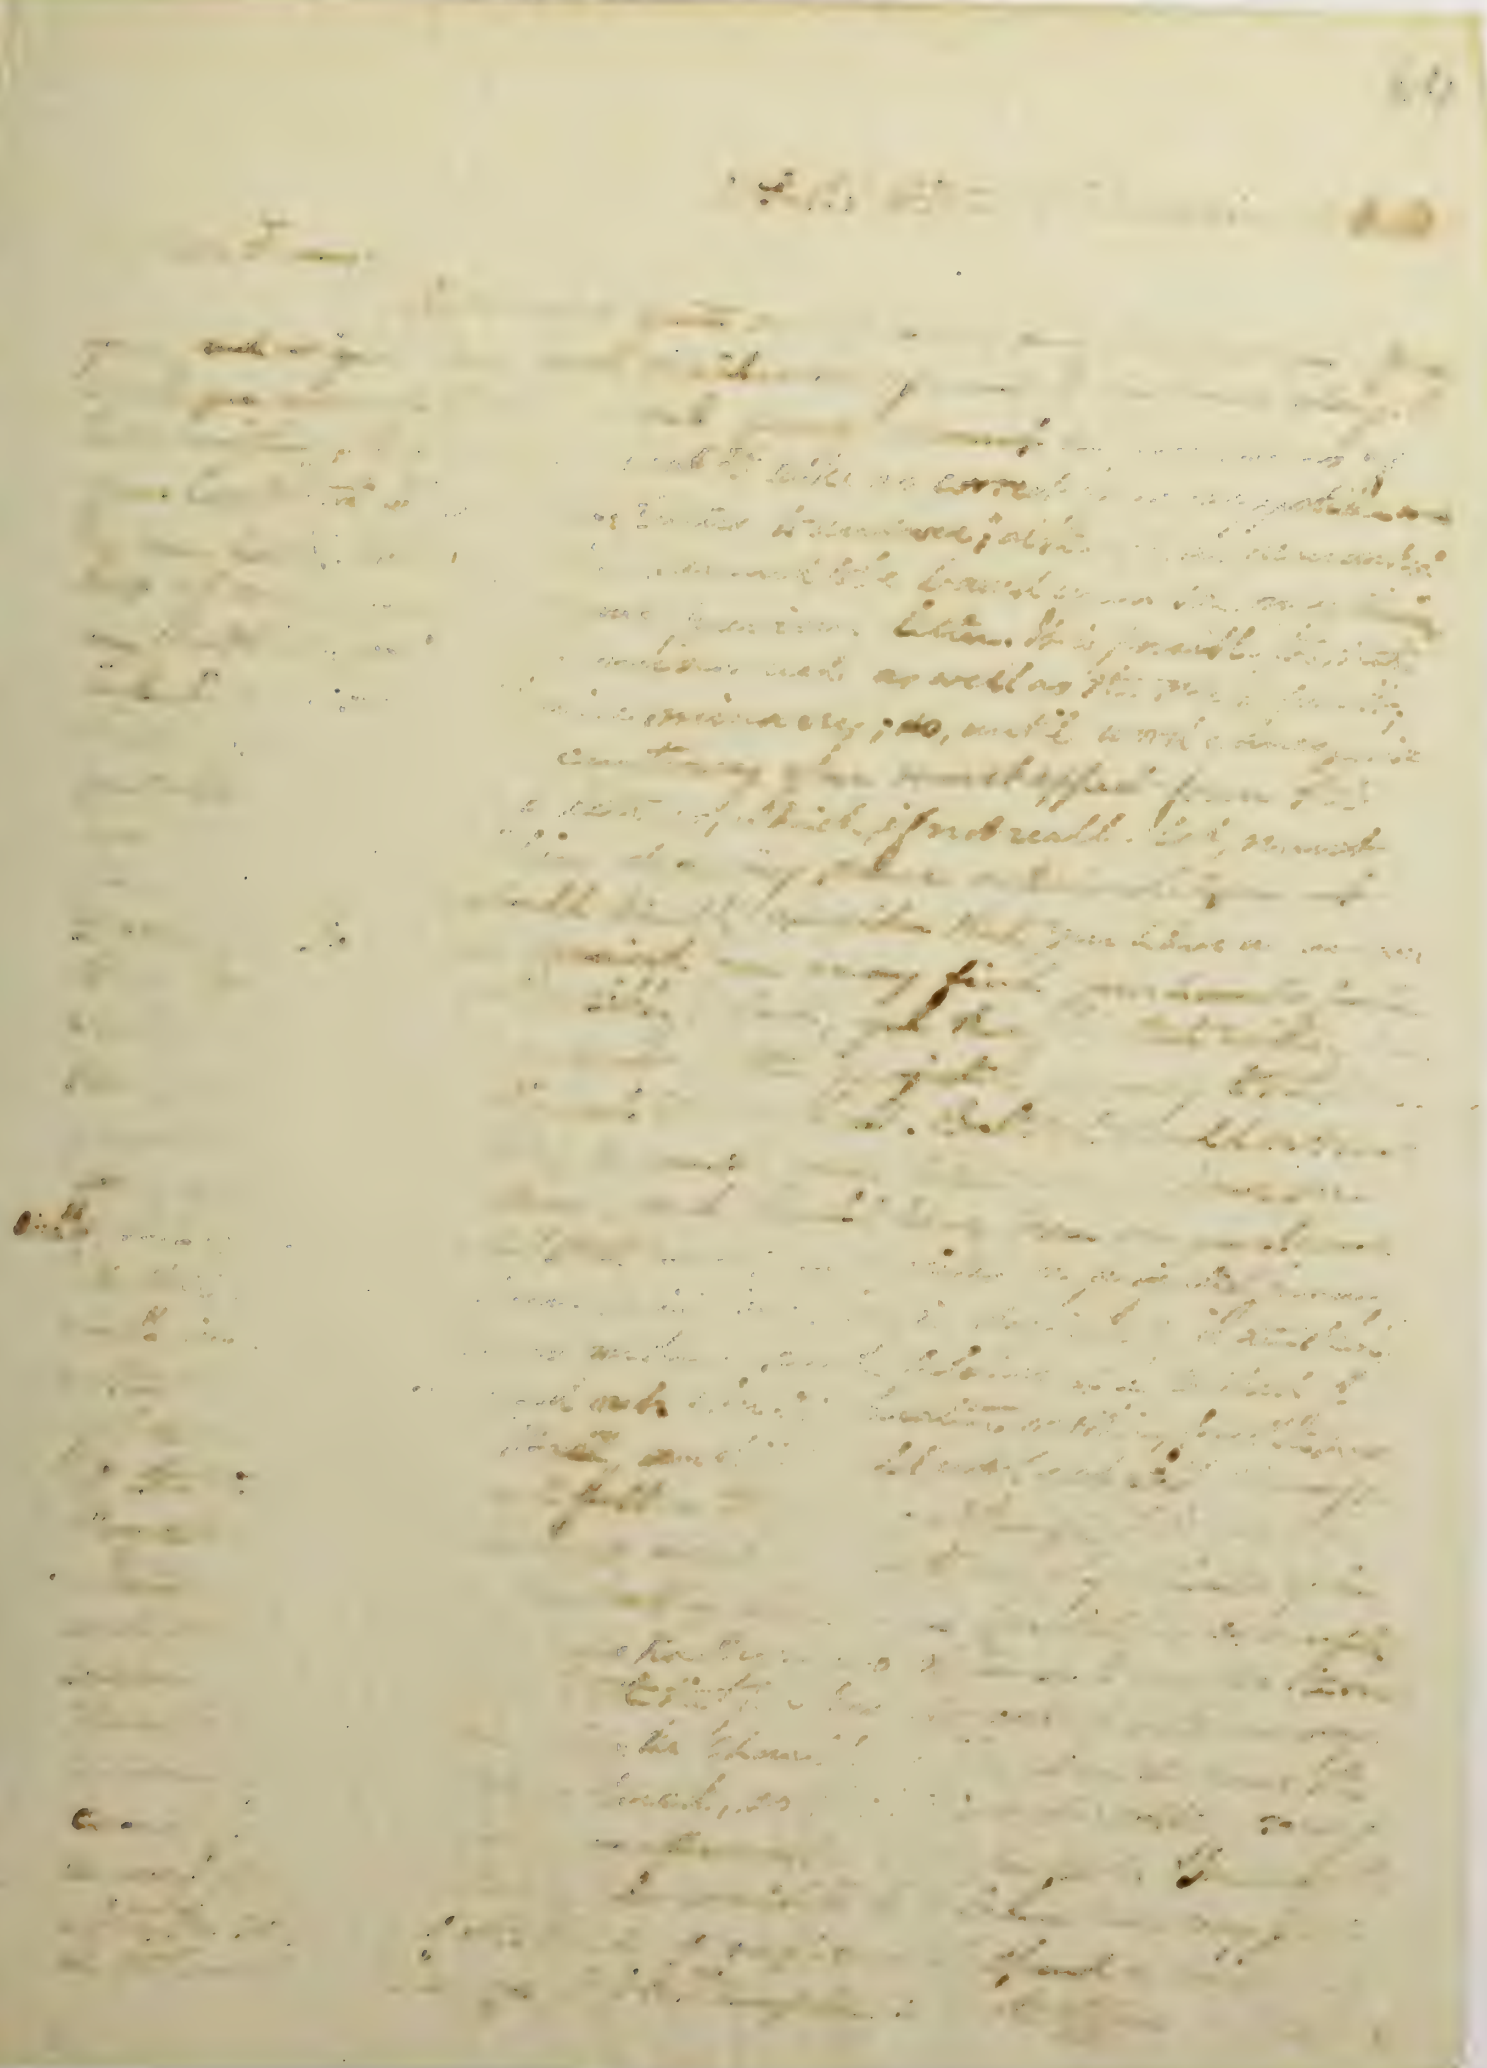
[illegible] of last November came duly to hand. Since then I have [illegible] and have [illegible] to spend the greater part of the winter in the [illegible] and [illegible] [illegible] [illegible]

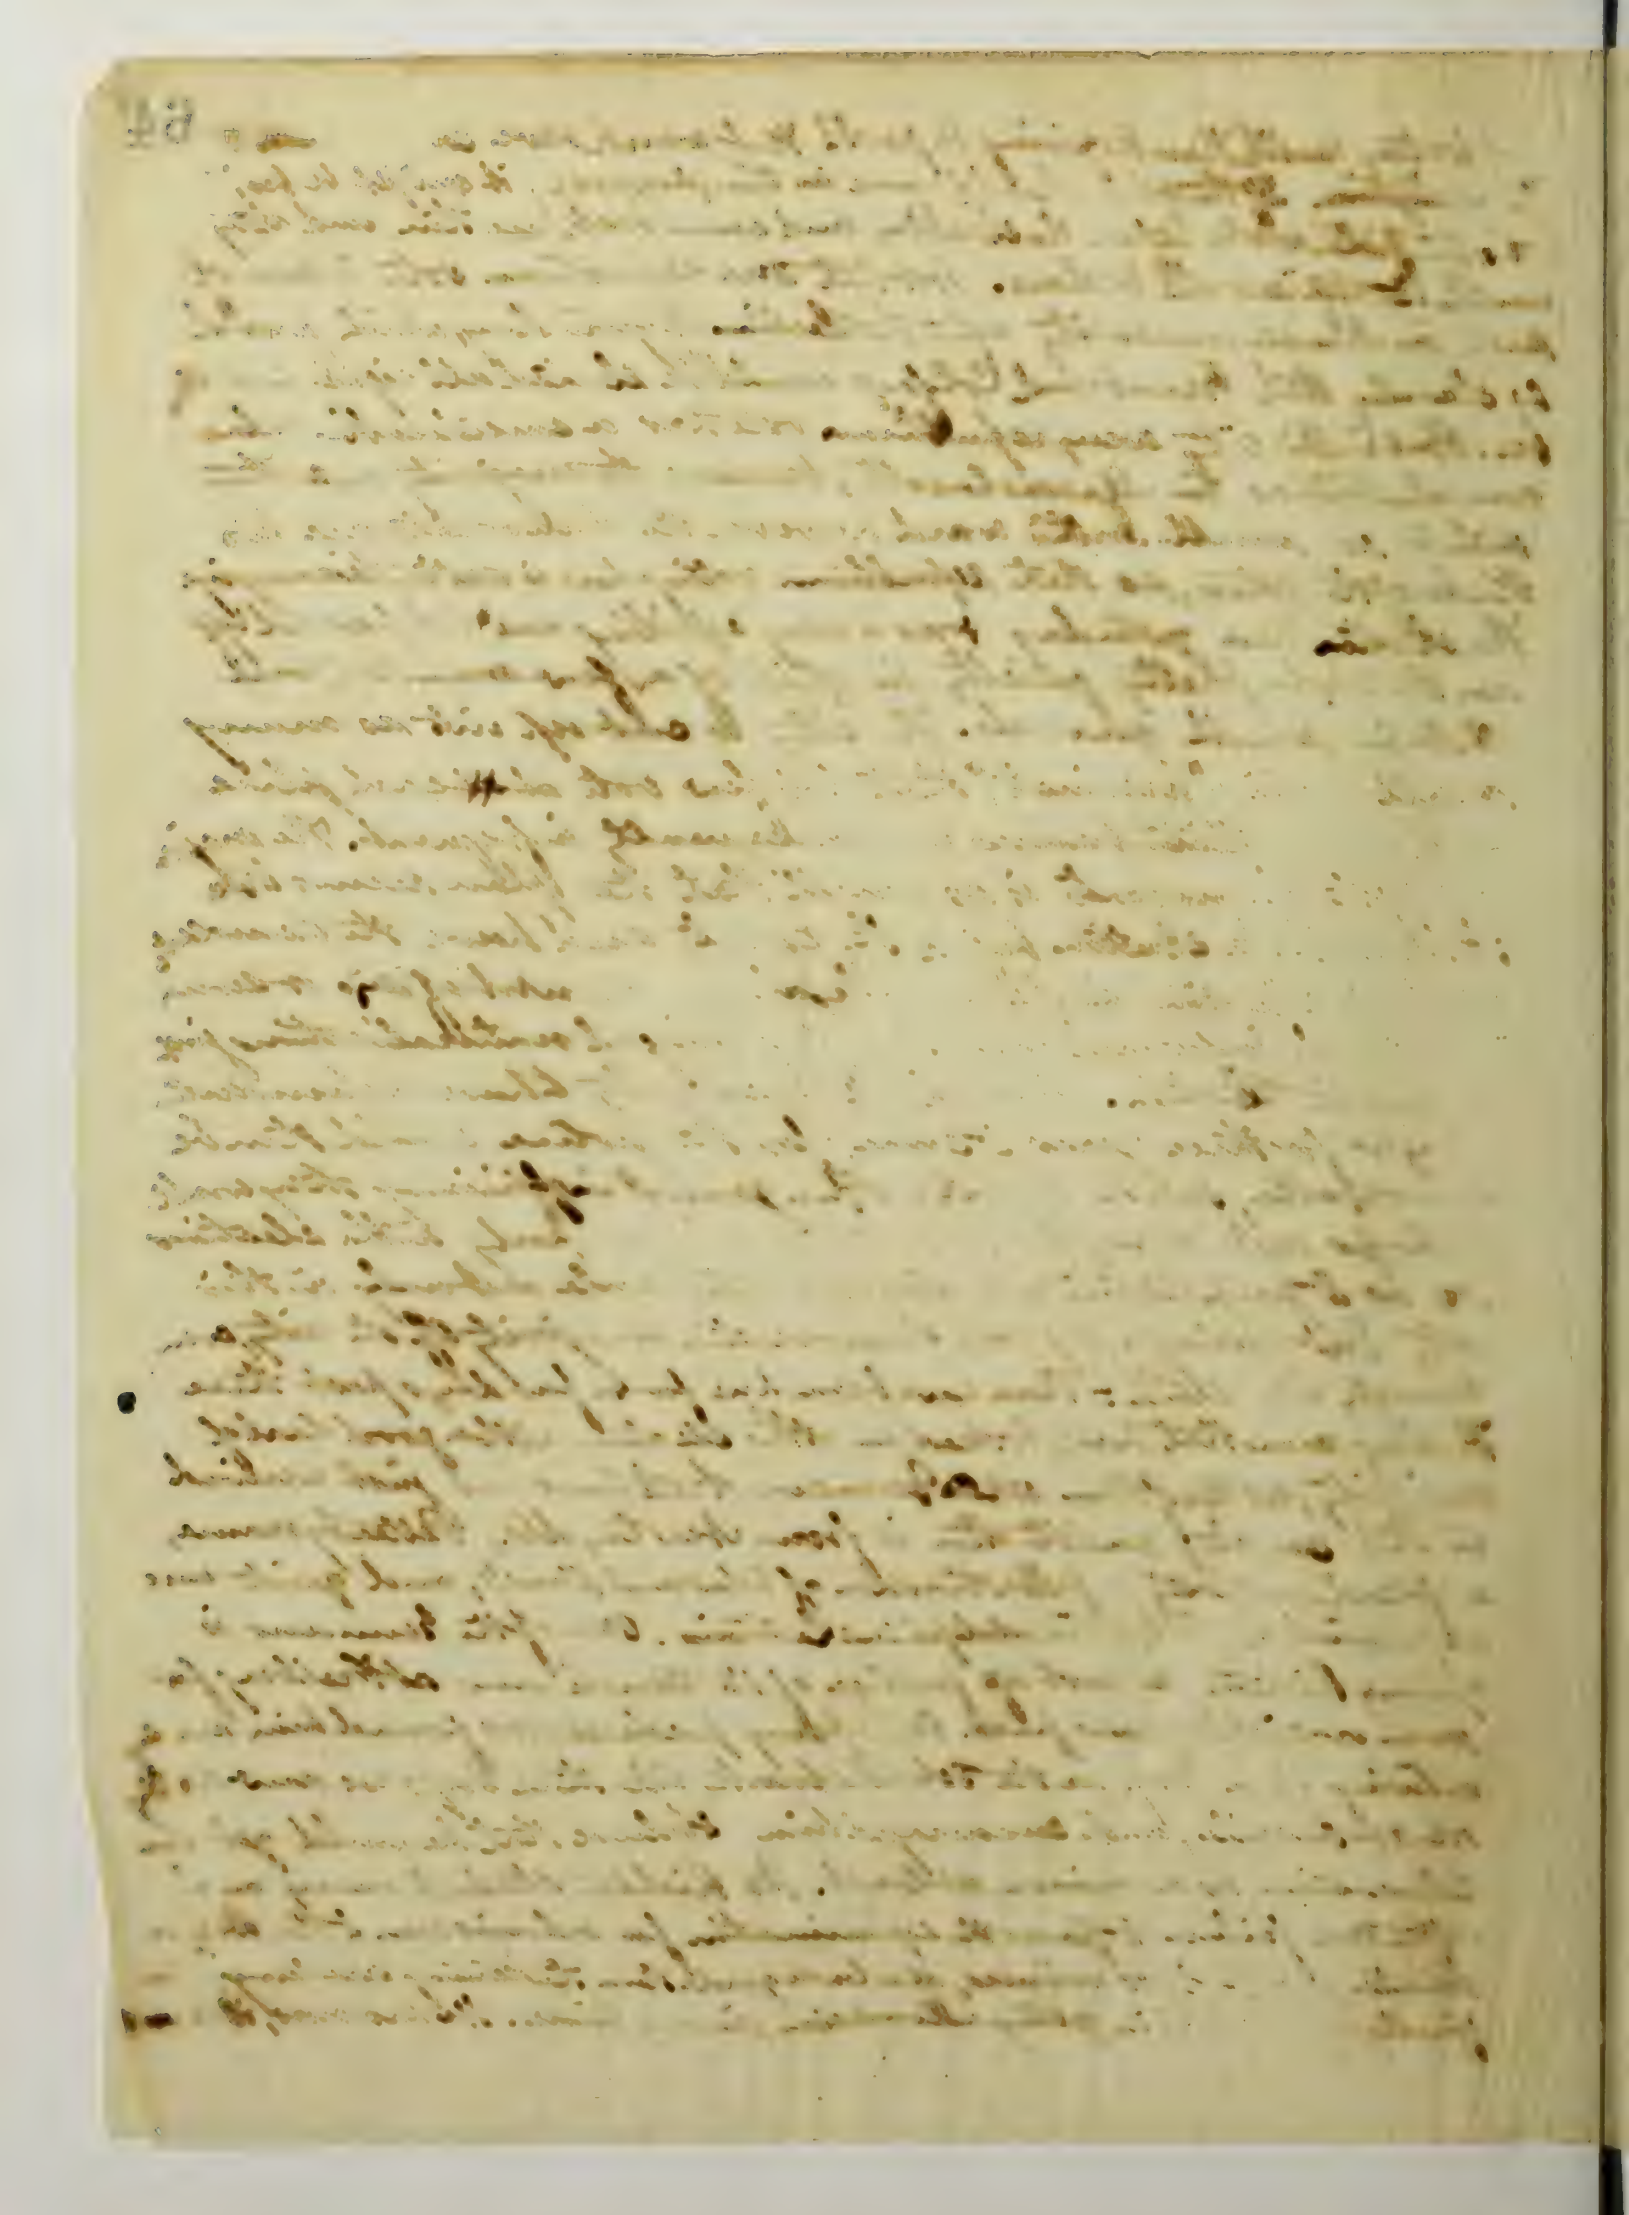
Mr. Lesley arrived in Boston from Cambridge Saturday, and went right out to Jamaica Plain. He has been in Boston every day since and dined with us on Tuesday night, the night of the meeting of the Historical Society. He seems pretty well, but has not much use of his right hand. He dined at Mr. Everett's on Monday and Tuesday. Does not sleep well. Mr. Lesley, of course, has declined the professorship of Botany at Harvard. He prefers that of Natural History at Brazil. He is not pleased by Mr. Agassiz's influence. The Professorship is not a very lucrative one, however, the salary is only $1800 and nothing else. Mr. Lesley also declined to preside over the Girls' High School, for he wishes to be perfectly free from any and all engagement this winter, that he may attend to the completion of his Catalogue of the Library, and avail himself of the opportunities which are peculiarly favorable for bringing this work to a close. Mrs. Lesley is not well. She has been ill with a cold ever since she left Cambridge.

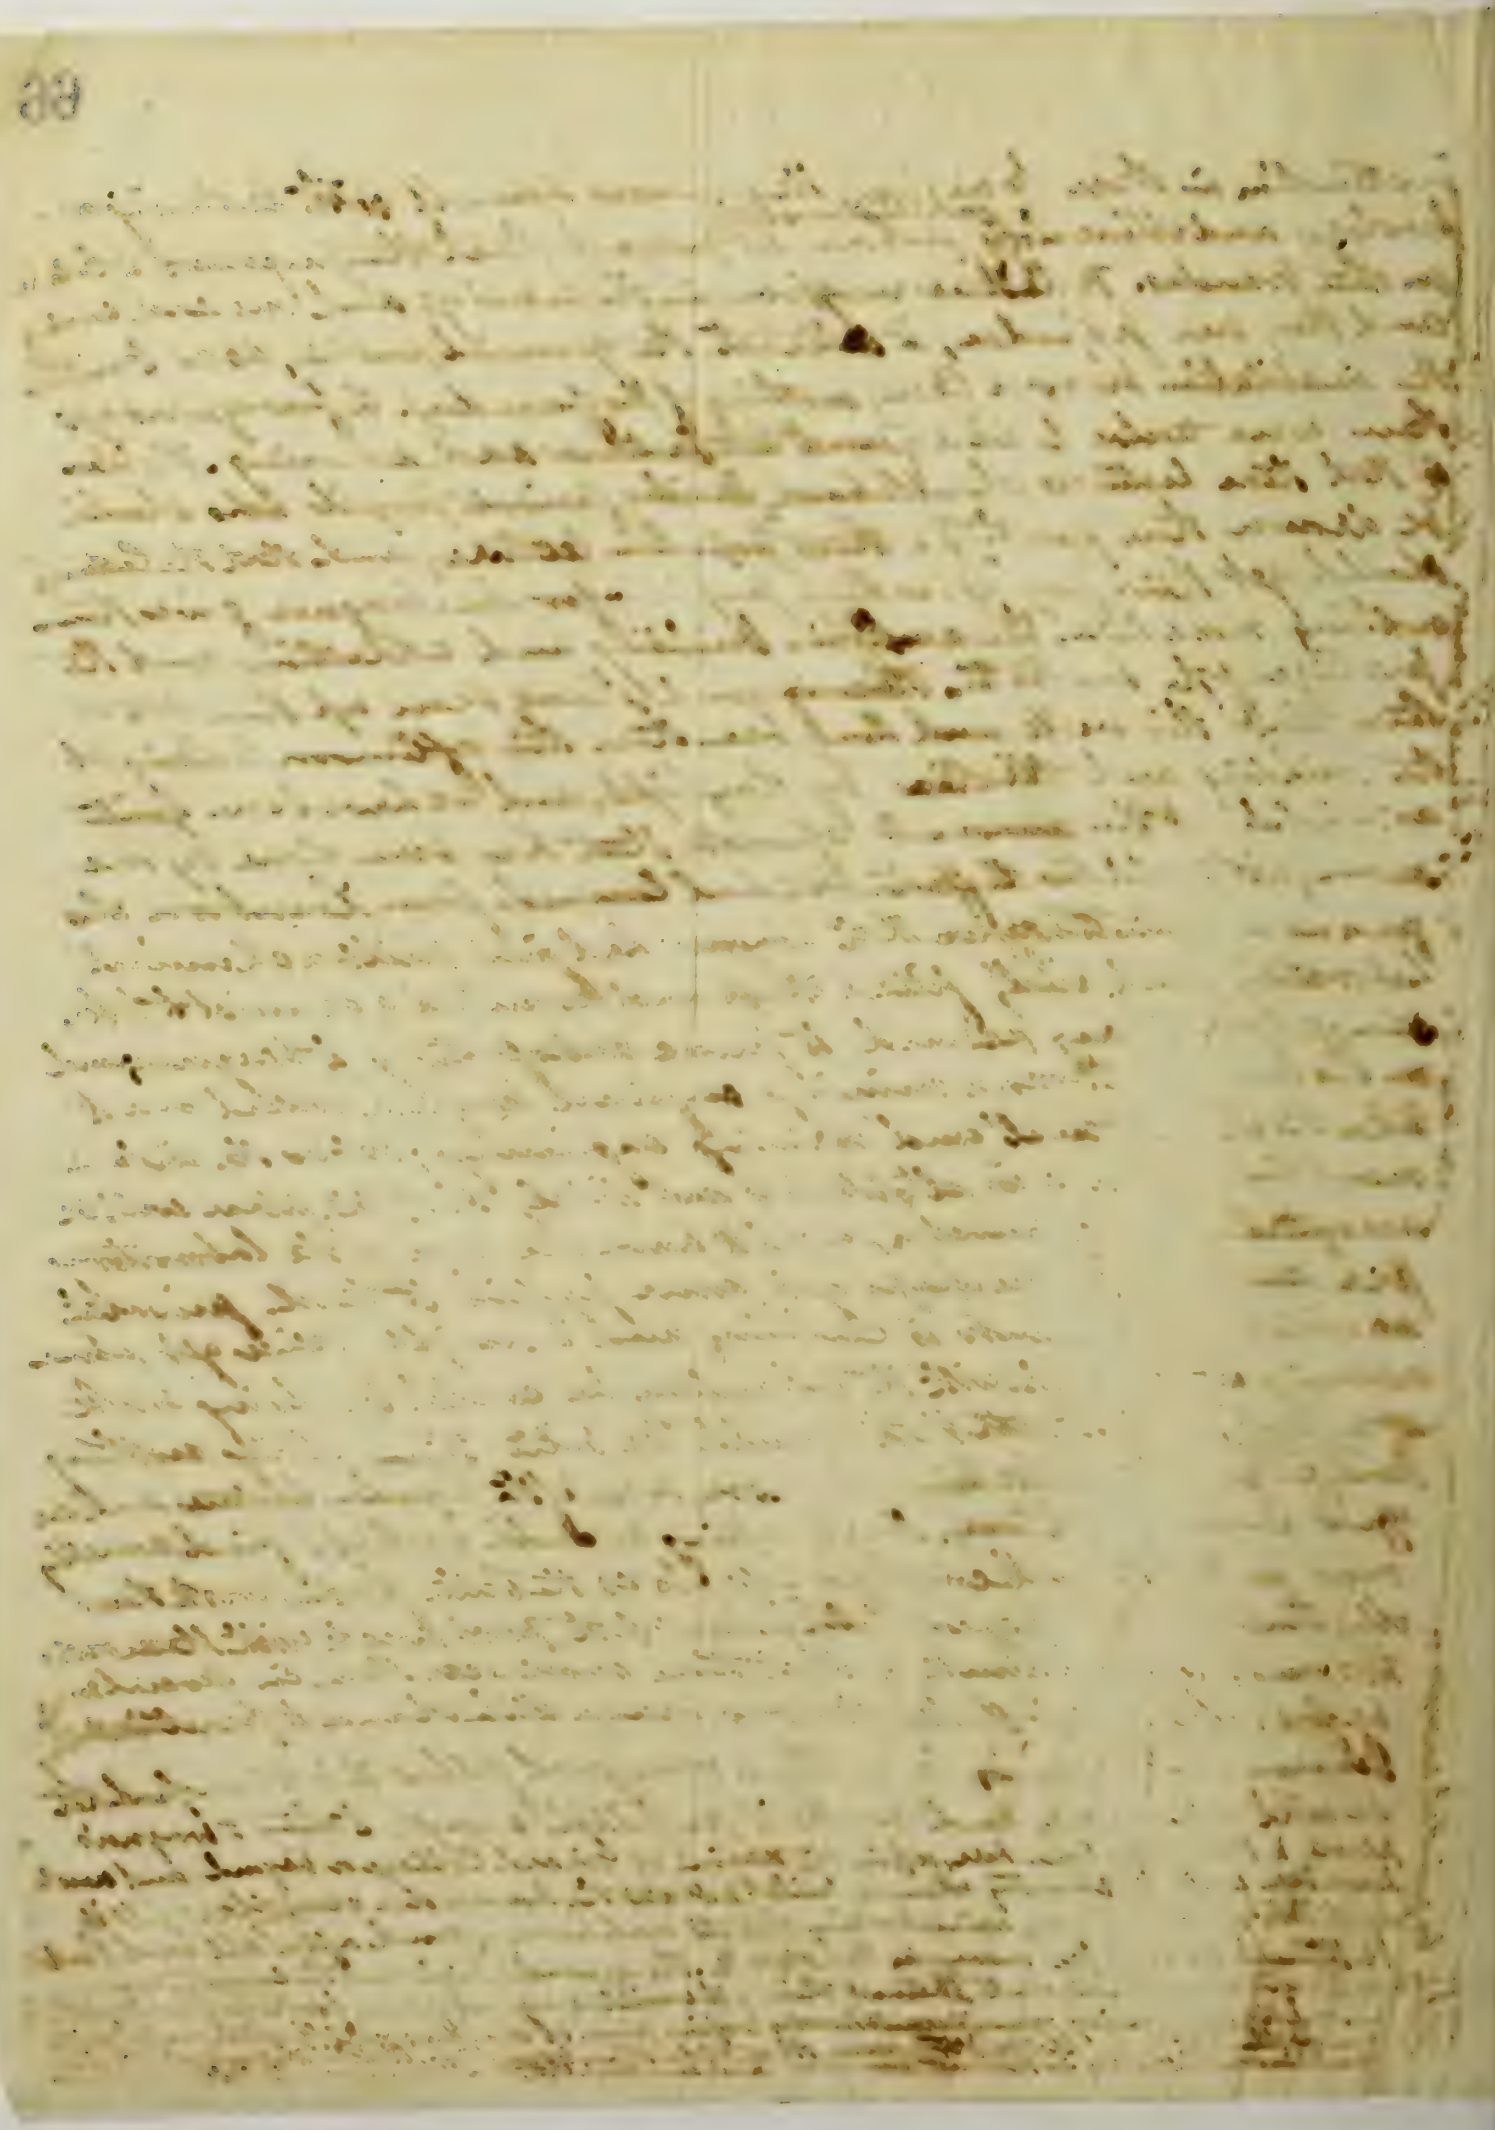
The Social Science Convention has been in session Wednesday and Thursday and Friday. The exercises on Wednesday afternoon in the hall of the meeting of the Historical Society, and also in the evening, and also in the Music Hall, were very well attended. Public meetings were held in the streets on Thursday evening, and also in the evening. The meeting on Thursday evening was the largest crowd ever seen in Boston. It was held in the Music Hall. The Boston Symphony Orchestra was present.

I went last Wednesday to see St. Paul's and for the first time I visited the Tombs. They are a sad sight. The Hall of Justice is a very fine building. It was built about three years ago. It was all new to me and very interesting. And in one of the courts we visited, it was at the trial of Hunter, who, [illegible] was acquitted by the jury. [illegible] a little [illegible] problem. [illegible] in [illegible] and [illegible] [illegible] [illegible]









chamber

draft on the Illinois State Bank

by [illegible]

above.

the cashier of the [illegible] above described.

[illegible]

and N. for [illegible] Leonard Landy for [illegible] purposes, and is handed in response for [illegible] neighboring county, and [illegible] land is entirely worthless [illegible] dear North Carolina and most [illegible] country because there [illegible].

The road is only two miles and a half south of Chicago, [illegible] and Pacific Railroads, which [illegible] and two miles [illegible] and only [illegible] direct [illegible] road to [illegible]. Chicago is only fourteen miles east of [illegible] and by it [illegible] and also from [illegible] which [illegible] road, [illegible] which [illegible] from [illegible] or more [illegible].

[illegible]

Philadelphia, [illegible].

35 South 9th Street, Philadelphia, 19th Oct. 1860.

Dear [illegible]

[illegible] well pleased with the results of the election. Our city election was unusually [illegible] and better than last year. The republican ticket [illegible] was defeated in the offices, most of the small majorities, and the majority by the [illegible] of all, about 800. This will be bad for [illegible] for the [illegible] will be democratic and will [illegible] gross frauds of the democrats perhaps if they [illegible] election. But [illegible] a strong disposition [illegible] and prove that a large number of votes, from 5 to 10 000, were fraudulent, as coming from [illegible] and from Southwark and Moyamensing. The republican candidate for mayor, however, [illegible] was not for reelection for his own [illegible] party, to withdraw and to conduct the election. He is first rate, a thorough business man, and a good fellow. I do not know Mr. Mann-Butler's politics, but [illegible] was a good organization, ought to have [illegible] republican majority. Your account of Lucy's wedding is quite interesting. I have never [illegible] that the language has ceased to [illegible] who attends a wedding.

My time lately has been a good deal taken up with two Freiberg Students that have just come here from there. Those are Germans, and one of them has already found work to do with my friend in Clay Cope, and after spending a week or two here has gone up to the Leadville Coppers and mines. This German could not write English. He was an old acquaintance of mine in Freiberg; but then he was just beginning his studies and I was still earning his living by working at the mines. The other German is older and better educated; and he is in search of a situation as Chemist or metallurgist, but is not so pressed for money but that he can wait for employment and is quite willing to do so. He is a very intelligent good fellow, and I have had much pleasure in his society. The other Freiberg Student is an American named Pettigrew, brother of Boling and Lucy - fellow traveller of Edward Howe's. He is now gone off shooting for a week. The German Chemist is still here, but will go away for a short time at least day after tomorrow. His name is Koenig. The one who went up to Leadville is named Richter. Richter while here took the first step towards naturalizing himself by declaring his intention to renounce his allegiance to all foreign powers. All three were much interested in seeing our election last Tuesday. I tried to set the foreigners straight in politics, but I soon thought it more to my profession to be trusted implicitly for they did not seem inclined to be satisfied with settled political opinion.

Give my love to all. Your affectionate son. Benjamin Lyman.

U. S. Coast Survey, 11th Street, Philadelphia, 20 Oct. 1865

Jas. R. Bramhall, Esq.
Revere House, Boston.

My dear Sir:

Your letter of 17th inst. with enclosure of Mr. Merriam's report and of Mr. Wright's, both have been duly received.

I have found even far more work upon the map than I supposed when I first undertook it, and, owing to my own negligence in regard to time, have worked it up carelessly; and it has required many interruptions and delays to it and and the engraver at length have. The map has been photographed on wood, the sole original and a copy of the photograph attached to it. I should prefer to have a copy of the photograph that I could write on, but Mr. Merriam is willing to furnish him a tracing on paper. The original map, the photograph, and the map, report, the printed Circular map, and the letter of Mr. Wright from you before have today all been sent to Prof. Agassiz, at Cambridge, Mass. There has been a delay of several days in getting the map photographed on account of bad weather. I hope it will all arrive safely, with unbroken tubes, and prove in all respects satisfactory.

You inquire in the letter received today about the manner of estimating the amount of coal in a piece of ground. After calculating the number of acres contained in the bed, I reckon a ton of coal (2240 lbs.) to each cubic yard contained in the bed; or a million tons to a square mile of bed 0.7 feet thick. A bed ten feet and a half thick would contain about two millions and a half to the square mile, or 250 tons to a square acre. This is about the whole amount as it lies in the bed; but of course a certain amount is lost in mining.

I remain, my dear Sir, Very truly yours,
Benj. Smith Lyman.

Washington, D.C. Feb. 15th 1861

Hon. H. Brand

Hill Pickens Indiana.

My dear Sir:

Your acknowledging the receipt of my letter of the 9th inst. was duly received, but I have to be so kind as to say whether you have received my opinion & my notice - known to you the receipt of the commission of your land. As soon as convenient after you will very kindly favor me with your opinion, and I should be glad to hear from you as soon as you may be able to do so.

Very truly yours.

Benj. Stanton Register.

1305 South Fifth Street Philadelphia, Dec. 15.

My dear Sanborn:

Mr. Charles Mac Donald

Civil Engineer

Reading, Pa.

Dear Sir:

My friend Mr. Fanshawe said last evening he would like you to write him on what terms I would make a careful examination of some land near Toronto supposed to contain valuable gold. It is hard to fix upon his case to charge without knowing anything of the nature of tract as to its precise position and accessibility but if it contains less than five hundred acres, I will make the examination for two hundred and fifty dollars and the expenses of the trip, of which one hundred and fifty dollars to be paid in advance and the rest on rendering over the report. If it should be larger than that, I will make a new bargain with you. As the season is already getting a little advanced for Canadian work, I would be glad to get off before long. Hoping that I may hear from you favorably soon, I am

Very respectfully yours.

Chas. Sandberger.

35 Duke St. Hallifax, Nov. 11.

J. W. Nelson Esq.
Wilberforce.

My dear Sir,

Your favor of the 3rd inst. I got three weeks ago to-day & should have answered immediately, because Mr. Lee [illegible] I posted the letter as I left the office, & supposed of course that it would be forwarded to you by the next mail. When we came from Wilberforce I [illegible] down, and he arranged our affairs with your lawyer as nearly as a fortnight or more ago, as the lawyer did not keep the appointment and nothing has since been heard of him by Mr. Lee. The letter was then handed by Mr. Lee and the name of the lawyer I well remember, but thinking it was Mr. [illegible] I went round to this office & saw Mr. [illegible] the matter again, and found he had gone to England. He was in New York and sent to Wilberforce on Saturday. If Mr. [illegible] will try again I see him, for Mr. Lee says he will be happy to do his part in the matter. Mr. Lee is [illegible] at his office, you will be sure to find him, but comes in often; and other affairs [illegible] from my head at the time that I could not [illegible].

I am sorry that this delay has put you to trouble & annoyance, as well as

Very truly yours
Benj. Smith Gannon.

[illegible] Philadelphia, [illegible]

Dear Sir:

[illegible] Mr. Koenig [illegible] you [illegible] especially to thank you for [illegible] very great [illegible] [illegible] in the morning and had a [illegible] [illegible] coming in here together, but Mr. [illegible] [illegible] Mr. Koenig. Mr. Corbin is glad [illegible] [illegible] early [illegible] morning, and in my [illegible] [illegible] [illegible] of his name on it. I should not have [illegible] [illegible] [illegible] him in your letter [illegible]; but his face was familiar [illegible] [illegible] [illegible] Mr. Corbin certainly deserves great credit for the [illegible] [illegible] [illegible]

Wm. just as we met Capt. St. Leger coming in & Wm. Lewis's
to be introduction and was so much surprised in finding
Richter here, for he had learnt he was quite well. Richter had
been taken by the Russians on his arrival & was with the Bishop
hotel on Spruce Street between Front and Second; but both had
Lewis went to a hotel on Third Street above Callowhill. Some
of Wm. Smith's place Peter was a little better. Richter visited him
two days and went up the same day with Capt. St. Leger.
Before going Richter took the first step towards getting naturalized
shewing his declaration of intention & renounced his allegiance
to all foreign powers especially the King of Saxony. Koenig has
moved to a house in the Lane and is still here. Four or five
families offer for him, all of them quite small or else very
uncertain; but we may find something to keep him alive
here through the winter. Richter to be here another
three months or more if necessary he says; but he left
Dr. Friedl coming to Philadelphia & he soon before he came over
in the spring as many agents & C. He seems to feel nearly
sure that the Government will be in a condition to use the good
offices of the Emperor. He and Richter had been here but a
day or two when Peter, your late President, walked
in upon Richter's astonishment. Peter stayed here a
week and then on October 6th Wm, and then went with
the Lehigh & see Jim Wortley there and over on the North
Branch to Wilkesbarre where they, and were then
going to Harrisburg & see Penrose &c & Dr. Ramsey & the
Bishop & many old Congress & other friends. Peter travelled
with Edward Howe in England and came with him & Hancock
last July or August. Howe became engaged & be married at
once on his arrival; the lady is Miss Lizzie Lindsay
of Boston. — Dear husband, I am, when you receive
I am glad to see you settled in such good spirits and writing
so well. Yours truly, Benj. Smith Barton.

133 S. 12th Street, Philadelphia, 24 Oct. 1868.

Prof. T. Sterry Hunt LL.D. F.R.S.

No. 2227 Spruce Street.

My dear Sir:

Now the best plan I have been able to think of for the geological studies you proposed reading with me.

As you will no doubt become familiar with the practical duties of geological work, it seems desirable, in spite of the practical experience already had in both the field and office work pertaining, that you should do a certain amount of the drudgery office work as well as original field work and topographical surveying as my assistant. Much of it may seem mere drudgery, but even drudgery is to be done if it is not carried too far. It is also very desirable that you should have time for the study of books and some guidance and help in that study. Recitations or oral questioning is very useful even to grown up students as an incentive to study; but it would be much better to have you, and myself also, have access to me still better. I propose giving you any week or month a subject to read up in works that I may mention, in order afterwards to write a paper upon it, in which paper you shall state briefly and as clearly as you can the principal facts you have learned. This will lead you to digest your notes successfully the information you get, and the hours of practical drudgery will be of use for this very purpose of digestion. Besides guiding your readings in this way I may be able to give you, in a conversational way as we work in the field, my own views of the best way of arranging the facts you learn into a system. The geological subjects given out in this way weekly for your study would be intended to cover in the course of the winter the whole general of geology of the [illegible] be ample room for carrying on the same plan of study much longer than that by going deeper into the details of the science. The papers you would write would be a basis for further elaboration, correction and alteration in after years.

The office work you would do would be of some value to me and would compensate me for the trouble taken in teaching

you; so that if you would do office work the home all day, may be one else in the morning & Tuesday, I should feel myself for my trouble. The arrangement would have the ~~advantage~~ that neither of us would feel tied to the other, and we could separate any day without breaking any agreement that depended on a succeeding consultation. All this so far, applies to office work and studies here in the city; in regard to trips into the field and work there, we could come to a precise understanding in regard to each trip before setting out. I should probably expect you to pay your own expenses if you went with me and help me in the field without compensation, in return for the practical information you would get from me there. Perhaps later I might find your services of pecuniary value beyond that. And journeys might be not long and expensive for the benefit they would give you.

There is no field work on hand just now, but four pieces of work in that line of one kind or another may well happen that some one of them may be ~~what~~. One of them that has been broached only this evening is a large affair that is expected to take several months, and might employ me in the field until the snow came and then study in the spring, and perhaps give some office work to do here in the winter. I shall probably know more of this early next week. One of the other pieces of work would also probably take some time, say two or three months, but it is very distant and less desirable than the other, and it can not be decided upon for some weeks to come. If none of these engagements should be made and I have plenty of work to do that would be equally good practice perhaps for you, although it would be only indirectly of pecuniary advantage to me; and this work would be here in this city.

If this plan I have proposed for you strikes you favorably please drop me a line saying when we can meet & fix upon the time of beginning to carry it out. I shall probably be home all day Monday of the coming week, but on Tuesday and perhaps Wednesday I have to be gone during the time into the country.

Yours, my dear Sir, Very truly yours. Prof. Wm. M. Lyman.

Mr. Richard H. Allen,

Box 370, P. O., Jersey City.

My dear Richard:

[illegible] I am quite right in supposing that you [illegible] and in this light, [illegible] and opinions.

It is impossible to [illegible] length of time [illegible] with [illegible] anything every [illegible] [illegible] would naturally have the [illegible] I would undertake the work for one [illegible] my whole attention and existence [illegible] appearance per whatever [illegible] letter, including [illegible] money you [illegible] [illegible] and one [illegible] besides travel [illegible] may [illegible] [illegible] in every part in [illegible] In starting [illegible] United States [illegible]. I suppose the mere journey both and forth would take [illegible] and that the work [illegible] would take a month at least, as there is not much very [illegible] It is possible too that [illegible] would like to [illegible] well [illegible] at the same time.

I should like very much to make [illegible] as I have great curiosity to see [illegible] and the climate there would be an [illegible] change for the [illegible] winter weather. [illegible] I should run many risks and put myself out of [illegible] that would be more profitable in the long run. [illegible] I should [illegible] it is desirable [illegible] as soon as possible [illegible]

[illegible] Send me [illegible] and photographic [illegible] Yours affectionately, Bayard Taylor.

1035 N. 15th Street, Philadelphia, 2 Oct. 1861.

Dear Sir

Your favor of last Sunday has come duly to hand. I was glad to hear of the addition & I am sure it will be a very great improvement to the Book. I am very glad we differ in opinion as to the Frontispiece. I am sure it will always be a good seller. But will precede the History about one form. My friend & I both agree that the present picture is the most important part of the Engraving & will have her photograph in my album. I am very glad to hear of Mary, and hope Kitty & Clara; and have been expecting a letter from Mary. Mrs Larson wanted to know if Ellen & the baby.

I was at Mrs Lee's last Sunday, and got to engage for one day's walk in the Country, to take place on next Sunday week. Mary & Clara are to be there also & we shall have a pleasant time. Mary Lee is not well, & I fear she will not be able to go. She has been very poorly for some time past. I am glad to hear that Kitty is better. Tell Mary I received her letter, & will answer it soon. I am glad to hear that Mr Pettengill is better, & still more so that he will go on with his engagement at Erie, as I was very much afraid he would not.

138 South 3rd Street, Philadelphia, 28 Oct. 1836.

James A. Bell

Hotel Pelham,

Boston.

Dear Sir:

Your favor of the twenty-second last came duly to hand. I had long before [illegible] your letter [illegible] and [illegible] as soon as I could. I regret very much to learn that Mrs. Bell's health continues so delicate. I am perhaps unduly [illegible] on that subject: I recently [illegible] [illegible] [illegible]

135 South 13th Street, Philadelphia, 28th Oct 68.

Mr. Thomas Forbes

Havana, Illinois.

Dear Tom:

In a letter from my wife Mary yesterday I learn with great pleasure that you and Emma might and would for a little time; and I hope to hear speedily on this point and also more fully. Each year attach the responsibilities of a family add a constant warning this old bachelor that [illegible] case is not to [illegible] always wise.

Mary and Fanny have no doubt informed you fully long before this of our peregrinations after we left home; of our pleasant visit at Wells and our going while there to the Niagara Falls; of our visit to Buffalo, Rochester & Syracuse; of our cordial attendance, the girls as well as mine on the scientific meetings at Utica and on the evening [illegible] as well as that; of our return home by Lake Erie as far as Cleveland, and how Fanny nearly lost overboard [illegible] of the passage across Lake Michigan at least [illegible] if her mother was in her words a good [illegible] in the matter; how we had ten minutes at Cleveland [illegible] dashed [illegible] for your wife [illegible] Mrs. Lord being very desirous of [illegible] of Milton she and found any dear ones or [illegible] thought [illegible] we no doubt found her hotel, and Cleveland [illegible] Pittsburg through a country growing richer and richer as they [illegible] could not but feel "so glad in" and pine for the wide Lakes and broad prairies; how we crossed the Alleghanies and came in the [illegible] without finding it blue nor seeing any wild [illegible] ing Kfarata; how we staid [illegible] couple days and then [illegible] Harrisburg & Baltimore reaching [illegible] all [illegible] is no doubt an old story to you. But it will be long before

the girls and I will [illegible] I came in [illegible]
darlings & we will [illegible] you may be sure [illegible]
of love for [illegible] will be remembered with [illegible]
the days we passed with [illegible] in Illinois. Our visit
at Havana was [illegible] delightful and [illegible]
I was a dull c[illegible] that above [illegible]
towards Lexington. [illegible] and make the best of it

At the end of the Chicago meeting I left the girls there
for a day and two nights (as we had [illegible]
help found quarters in a magnificent and comfortable
rooming house on Michigan Avenue), and I went to the
at a little [illegible] for Mr. Jas.
M. Barr of Boston, who had telegraphed underwriters to
one. Since getting home I have made a little [illegible]
[illegible] of the week, and I see [illegible] a small share
public c[illegible]

[illegible] I go for the day. I found of course
[illegible] attentive in my
absence [illegible] the thing [illegible] the girls have missed
[illegible] which [illegible] I [illegible] have [illegible]
me. Mr. [illegible] that mes[illegible] [illegible] dinners had come
all [illegible] from [illegible]; and you
ought to [illegible] the attentions I have received among
the [illegible]. Perhaps the [illegible] wedding
[illegible] divorce, [illegible] so long a [illegible]
as [illegible]. I [illegible] we have [illegible]
have [illegible] had [illegible] c[illegible]
[illegible] a sitting [illegible], [illegible] the [illegible]
as [illegible]. You [illegible] [illegible] enough [illegible]

[illegible] you and [illegible] and [illegible] the [illegible]
with c[illegible]

Ever yours affectionately

Benj. Smith Lyman.

[illegible] Dec. 1866.

[illegible]

[illegible] your letter of yesterday is to hand. I regret [illegible] you have declined [illegible] I should have been very glad [illegible] I am glad that you are going [illegible] It is a pity for us that you and [illegible] that you have probably known [illegible] and certainly what would [illegible] I am glad [illegible] I am [illegible] I [illegible] I [illegible] I

…ter and [illegible] is that the sugar coating [illegible] …
…ble advantages as a physician [illegible] …
…advantages in life attend it, [illegible] …

He writes tolerably good, and … by doing a little work for me … also be practice to him. He will give … month. I fancy and here is no keeping … I should have to get up some work that … indirectly, but possibly indirectly in search

[illegible] first rate fish over last year fifteen [illegible] Lake Superior. [illegible] a small lake in Canada [illegible] Bay Chaleur and this is through lakes [illegible] one in Pennsylvania, [illegible] Kate would like [illegible] and perhaps all summer. And this evening [illegible] Indian Harbour reached home; I am glad I could find it, a place in the Penobscot river [illegible] by Lambert, a Professor [illegible] and will be glad a good deal of travelling on [illegible] and will have time for demonstrational work [illegible] many chances to fish and work. It is said that it might [illegible] we do not expect that I could be here half the time and [illegible] all Year. The salary [illegible] is not at all high, but it was first said there would be chances for outside work and a good prospect of increased salary if successful. I shall learn more about this matter. Our child Katrine [illegible], three years and a half old, and without [illegible] I have had this now, not feeling sure as now the [illegible] of any friend to [illegible] that I could [illegible] half the time instead of [illegible] all the time, nor that I could do outside work [illegible] up the matter. If the great saving in North [illegible] could be reduced, I should prefer [illegible] to many of the others; but the Ecuador trip would be an agreeable one in winter. Nothing positive has come from Mr. [illegible] about the Hudson River job; but he ought to have written [illegible] and may have neglected to do so from his ordinary dilatoriness in such matters. — The Shelby students are all gone; Wilder is at work at Coles Mines; Peter is still on his roads in Pennsylvania; and Koenig is visiting at Easton the [illegible] of his Shelby [illegible]. Koenig is the only one of them who is likely at all to [illegible] here. He is a good fellow as I said before, but is getting a little annoying with his [illegible] contempt of American matters and his strong tendency towards the Democratic party. He is young and has travelled so little yet as to [illegible] that differs from the German standards; and he forms decided opinions on too small foundations, generalizes too quickly by far. [illegible] So good bye for three weeks, if it must be so. Give my love to Hannah and [illegible] and [illegible] Very affectionately yours. Benj. Smith Lyman.

Doubtful Penn Coal Trial. The first Penn Coal trial during June (12 Sept.) was suspended because the [illegible] Tuesday [illegible] Wednesday [illegible] order. [illegible] was [illegible]

Early Failure of Penn Coal. In the first [illegible] was noticed [illegible] called; and [illegible] minutes (11:09–11:18 and [illegible] 2:57–3:14) on the 24 Sept; and [illegible] 10:57–11:07) on the 12 Sept; and [illegible] 10:31–11:01) on 26 Sept. It settled first [illegible] the gauge rod, [illegible] the valve. [illegible] leaked [illegible] a minute [illegible] gauge rod

would be more careful in determination of the amount of leakage were left out until a more convenient time. At first the tank should not be used otherwise. The discharge was not in use during the trials after the coal test (Nov 6th) because the feed pump was filled up to the injector. The tank is also confirmed by the close correspondence of the average result of the three coal trials ($\frac{7.66+8.03}{2} = 7.84$), just before and after clearing the ash pit of the fires, with the intermediate coal result (7.79), coal of the same delivered quality, allowing for leakage, in this trial of a pressure of pounds, engine not working). It is evident that the experimental interruptions with the injector could not be more advantageous than the known constant regular feeding with the pump, but, on the contrary. Yet the results of the trials when this latter was used would appear no worse than those with the former kinds of feed with the proper allowance were made for this limitation.

Measurement. The water at Rio was measured by a graduated wooden rod upon a float in the tank. It was marked in equal divisions and proved at first

[illegible] the experiments were made after they were used

6

answer to the [illegible] and [illegible] October it was placed, but they answered to weigh of only eight pounds each, and they never been restored as in the table. The course of the take in consisting of [illegible] as the last already mentioned, that [illegible] while the [illegible] weighing was going on.

Temperature of the Water in the Tanks. The temperature of the water in Johnson's tank could not be very greatly different in the long run from what it was in front of the Rising Sun trials; but in some of the trials at Rising Sun the temperature was known to come in mind that they were made chiefly in the day time in comparatively warm weather, as that [illegible] comparatively warm, while the [illegible] of Johnson were made in the [illegible] and almost all of his lasted through the night as well as the day, so that the tank water must have been cooler on the average. Still, this difference could amount in the result to only about [illegible] for every ten degrees of temperature [illegible]; and it was therefore not thought worth while [illegible] the roughness of the trials in this respect. But the temperature of the tank water at Rising Sun

It may be mentioned, however, that the tank water in Johnson's trial of Pittsburg coal averaged (40°) probably nearly thirty degrees less than in the Pennsylvania and Franklin Westmoreland coal trials at Rising Sun. On the other hand, in the Rand coal trial at Rising Sun the tank water was probably as cold as in the coldest cases of Johnson's hard coal trials. In the Cannel coal trials the tank water was probably twenty degrees warmer at Rising Sun than in Johnson's trials.

Temperature Expansion of Water in Iron. The Rising Sun apparatus had no means of testing the exact temperature of the water in the boiler any more than of that in the tank. Of course, as the boiler and tank would expand with the heat they would change their capacity, but the water would expand at the same time in a greater degree. According to Johnson the assumed expansion of water in iron from 68° to 70° (Fah. scale) amounts to four per cent. This was considered by him in restoring the level of the water in the boiler at the end of a trial to what it had been at the beginning. But in the Rising Sun trials the temperature as roughly shown by the pressure of the steam was about the same at the beginning as at the end; so that no allowance on this score

3

are made. A corresponding effect of expansion of the water in the tank must have taken place; but this was also in the direction of the error, and to one fifth of one per cent. Between forty degrees and eighty degrees, the [illegible] were accordance with the accuracy of observation in the trials.

Temperature of steam. The rising steam of low tables has no [illegible] of rising exactly the temperature of the steam; but the pressure of the steam [illegible] 1/3 pounds as shown by the steam gauge, which were their true temperature. This seems to be not much higher than in Johnson's trials as to be expected to about two percent. in favor of the rising steam trials ($\frac{1024 - 1005}{1005} = .02$).

Temperatures of the air. For a perfect comparison it would have been necessary to note the temperature of the air during the rising steam trials; for the warmer it was, the less cooling effect it would have upon the fire and boiler. During the week and the time of day in which the most successful rising steam trials were made, as compared with the corresponding trials of Johnson, the observations of the register would seem to show an excess of the rising steam trials; but it was not thought worth while to [illegible]

4

[illegible] of the air in Trials thrown as high as [illegible] will make not very much greater [illegible] [illegible] [illegible]

[illegible] In order to determine [illegible]

11

[illegible] and the amount of heat [illegible]
by them as well as the amount of air drawn
through the grate and its cooling effect. This may
be measured or calculated by help of a siphon or
water gauge in the flue and by other means which
would be worth the importance without the con-
veying [illegible] above mentioned. If
the Tees prefers a mechanical [illegible] of
the air [illegible] temperature and consumption of
grate in the flue. It is likely that the draught in
all the Lancashire steam boilers except the Lord coal trials
was about as well adapted to the grate surface
ing surfaces as in Robinson's trials.

Heat and Heating Surface. In John Worthington's
[illegible] heating to the grate surface varied
from 30 to 1 [illegible] and, according to
the whole statement that the heating surface is 116
feet and the grate surface in most [illegible] in
x 21 in. = 15 feet (the measurements [illegible] and
other dimensions of the boiler were observed until
the new burning furnaces should be tried, when
coal furnaces would be cut) and reckoning the
tube tubes [illegible] the steam jets and the front
flue both without a jet (estimating the three round

11

2.

Hartlepool as two inches and a half square, or five square inches in all (2×2=5), and equal with the four square inches of the great (4×5=20), and the fifth square on the 3 in. as one fifth of the whole by rule (60÷20=12), and having for its base [illegible] equal to a square of great surface without a fifth; the value of the great surface would be equal to the fifth-square of the Wallsend equal to the Russel Cannel, the Hepscott and the Hartley coal Trials. In the Russel Cannel Trial the coal great surface was half broken up, so that the value may have been equal to four pounds. In the day after that the front bore hole was right also, which changed the value to only 50 lb. Thus high values were not found in the great surface seam for the Hartley coal Trial, however, all the three bore holes were right but the great surface was enlarged to six feet so that the value was at 20 lb; and this coal is much better for the coal marks of the Hartley than the Hartley coal. It is very clear that many hard coal seams in the hard coal Trial; and those seams were at one time so hot as to melt the [illegible]

[illegible] [illegible] [illegible] [

air was between the boiler and the brick covering, so that the heat of the fire and the brick covering passed through a certain amount of fluid, while the heating flue & hot air passages were all filled with particles of the boiler, and the brick covering was only heated by the radiation of the boiler. The covering of Johnson's boiler exposed a much larger surface to the action of air in proportion to the amount of fuel burned than [illegible] the case of this engine & boiler also a much longer time in proportion to the weight of fuel burned, as the travelling of the boat was kept up considerably a longer time. The [illegible] of this engine must be little if any less, probably much less at most, than the weight of the evaporative power already mentioned as [illegible] through the channels of the boiler & the five miles [illegible] obtained in the best samples of [illegible] ready & therefore utmost evaporative power of the fuel used. It is probable therefore, that the loss in this way did not exceed at most [illegible] by the [illegible] of the whole evaporative power of the fuel as we have in Johnson's boiler. The heat lost in this way from the [illegible] running at high speed must be much greater than it was in the slow

15

covering.

15

the grate at the beginning of the trial was of a different [illegible] from the end of the trial, sometimes a little better, but probably [illegible] worse. The average amount of fuel burned in each trial was about three hundred pounds so that a difference of only three pounds in the estimated amount on the grate at the beginning and end of the trial would make an error of one per cent. and the uncertain amount of ashes in the grate at the end of the trial added to the difficulty of the estimate. As the charge of fuel was only twenty or thirty pounds and the grate quite small it is not likely that this error could amount to more than two or three per cent. at most with the soft coals. With the anthracite the grate surface was large (six square feet) and the amount of ashes so large apparently as to make the fire much higher at the end than at the beginning of the trial; and the whole charge of sixty-five or seventy pounds made so little show comparatively on the fire that an error of twelve or fifteen pounds, or four or five per cent, in the final estimate would not have been very noticeable, even if the grate had been free from the great quantity of ashes. Fifteen pounds of hard coal, forming a single spread over six square feet of grate would make a thickness

11

[illegible] in bulk, in lumps. Johnson's trials were free from [illegible] error, because he picked up all coal alone lumps was tested, and all the small coal [illegible] as thoroughly as possible.

Composition of Fuels. No careful analyses either on a small scale or on a large one were made of the different fuels used at Rising Sun; and to compare with compare the additional evidence these fuels will throw upon [illegible] I do not consider the two sets of trials varied [illegible] in regard to moisture; for in Johnson's trials it amounted commonly to only nearly two per cent by all, of the whole weight of the coal. The moisture in the amount of ashes in different parts is usual quantity, and affects seriously the results of the trials. A general estimate only of the relative value in the Rising Sun coals could be formed simply from their look and from the frequency of striking [illegible] Kepler. The Bevan and Westmoreland and Franklin Coals were carefully selected, and seemed remarkably free from slate and other impurities. The Lykens Coal also seemed to be remarkably free from slate. The Diamond Coal was [illegible] [illegible]. The Lehigh Coal and the

.8

Newman coal seemed to have a moderate amount of ashes; the powdered coal, though looking perfectly bright and clean, free from dirt and sulphur, really seemed to have more ashes. The hard coal in the end a considerable amount of ashes, or rather was left in the grate unburned both end of the trial; in either case the result was notable. The difference between the Rising Sun Coal and Johnson's in weight of ashes and clinker might well amount in some cases to five per cent., or more, since the coals varied in that respect from five per cent of the whole weight of the fuel to eighteen and a half.

Charges. The charges in Johnson's trial were about a hundred pounds each; at Rising Sun averaged about twenty-two pounds (22 lbs. 9 oz.), or less than a fourth of Johnson's charge although the hourly amount burned was about half as much. Of course, the great frequency of charging decided by limited fire brick, but it is impossible to estimate how much per cent. The pushing back of the coal from the coking plate to the grate, and fixing it up with the poker, which took place every time, about once in five minutes, was also a manner a charging of the fire as often, as it

15

M

27

of heating dwellings, the attempts of the draught for steam [illegible] and heating railways, especially in the Lords and Bath; and the comparative of the gases in the [illegible] with in the two sets of trials; the [illegible] of the air and the expansion of the water in the [illegible] and boiler helped the Rising Sun trials slightly more than Johnsons, but to an unimportant degree; that the temperature of the water in the tank generally corresponded well with that of the [illegible] previously helped the Rising Sun Coals and that by five per cent, and the Hemelempstead Nuts and Small Coal by three per cent, as compared with Nuts of similar Coals by Johnsons Patent; that in the results of the Rising Sun trials from lack of proper gauges many of the [illegible] were [illegible] from inexact correspondence in the amount of coal at the start and beginning and end of the trials perhaps ten or fifteen per cent; and in the Hemelempstead trials from uncertainty as to the comparative value of the fuels as compared with the corresponding ones of Johnsons perhaps five per cent; that the [illegible] draught for the Nuts and heating surface in the Rising Sun Small Coal Nuts caused a very great loss of heat. It is likely, therefore, that, except in the

2!

[illegible] assembled very closely [illegible]
[illegible] & consists of Pittsburg & Lyd.
& results very much [illegible] to the seam
and in the entrance.

Sydney Coal. There are several beds of coal at Sydney varying different in quality, and it by no means certain that Sydney coal of the finest quality was the same. It was burned at Rivington same & seem to be the coal of the Pittsburg bed more than the one burned by Johnson does. The Rivington bed of Sydney coal was but a single one for a very short way, and the coal was very free from other; and the result was seven and a half per cent. better than in the first of Johnsons beds of Sydney coal. In the first trial he had the air shut off the furnace being closed; in the second it was open and the temperature of the gases in the chimney was forty degrees higher than in the other trial, owing partly to and on the flues, so that more air admitted and it was mixed to a higher temperature.

Hard Coal. The hard coal at Rivington is said by Mr Rich to be an inferior [illegible] (some of the coals are mine) to the Sugar Loaf coal. The coal from Sugar Loaf is known to be from the same seam

.3

Shield Coral. The main Top of this [illegible] Coral is [illegible] Shield-like, and [illegible] Shield Coral. [illegible]

The drinking quality of Water is [illegible] by having mixed with it a great quantity of [illegible] Lime; but in the White Coral and Madrepore stone of which Islands many have been [illegible] Lime-stone, although [illegible] Lime.

Soil and Climate in General. Islands [illegible] Soil [illegible] Soil [illegible] Soil

Nat. Hist. would [illegible] more than five per cent.
to save by burning it, and with greater care even this
[illegible] smoke. If however it be attempted to burn
up the small coal by itself thoroughly by [illegible] air
[illegible] great danger of burning to great waste
[illegible] much more by the cooking effect
[illegible] by burning the [illegible] smoke. If enough air
[illegible] just after charging, when the
smoke is [illegible] quantity could be [illegible] the
smoke [illegible] and would cause more [illegible]
[illegible] consumption of [illegible] as confirm experience
[illegible] to [illegible] charges as often as possible by [illegible]
[illegible] charges; but frequent [illegible]
[illegible] saving would only [illegible]
[illegible] The greatest saving in smoke burning
is [illegible] in the [illegible] flues comparatively
free from dust, as dust in escaping carries the
[illegible] but at rising [illegible] formed in the
[illegible] is with coal and optical, although this is
[illegible] with charcoal or coke.

Some [illegible] Robert Armstrong, in 1853, stirred
by conference all smoke burning efforts before
[illegible] saving was concerned. Bourne condemned
[illegible] in note A Armstrong's [illegible] and
in a paper written in 1853; and in 1857 [illegible]
[illegible] of smoke, not saving, but says that with

123 South Fifth Street Philadelphia, 3 Nov. 1863

J. W. Harden Esq.
Wilkesbarre.

My dear Sir:

I have succeeded at last in finding out Mr. [illegible] and in finding him at his office. Mr. Healy says that he will be unwilling to give his testimony before any Committee of the meeting of this society except in writing; and he says that on the eighth and twentieth of November the eighth is too soon for your purpose; but the twentieth would answer as well and that day will suit him. Mr. Brinton and Mr. Healy too, will need to know, of course, the exact time when each of them may appear and will get information on that point from you or your Mr. Many. We often say and know nothing about the case from having heard nothing definite from you about it. We shall however, first know that there would be no need of coming here at the time the testimony is taken. After the twentieth Mr. Healy will be living in the city here, and can probably be more available - about a fortnight of several days in advance. Mr. Many said he had no communication with you since hearing from you and had no information as yet about the affair.

I do not suppose you know of any architectural journal or periodical as you enquire about; if I should hear of one in this country I will let you know. Very truly yours, Benj. Smith Lyman.

35 South Fifth Street, Philadelphia, Nov. 66.

James M. Barnard Esq.

My dear Sir:

Your favors of the thirty first and of the first inst. with the three Dollars and forty cents for the photographs, were this morning duly received & gotten. The remaining ten photographs were mailed to you about three days last. Hoping that they came safely and promptly to hand. I remain

Very truly yours.

Benj. Smith Lyman.

135 South Fifth Street, Philadelphia, [illegible]

To H. MacPherson Esq.

Sydney, C.B.

My dear Sir:

Not hearing anything from you in regard to the feasibility of the plan I proposed for improving our Westland by a well laid out road through it, I conclude that it does not strike you as likely to pay sufficiently well for the outlay it would cost. It is now too late for me to do anything about the road this season even if it were desirable, and the return per Steamer of anything it might you would come so late, that I am inclined to have the land sold right away, before it is again taxed & the charges of keeping another winter. Besides I should be very glad to have what money may come from the sale; owing to the fall in gold it will be ten or twelve percent. less than it would have been a few months ago, and may be still less if the rate should be altered. This altered rate would make up for some difference in the [illegible] gain in Nova Scotia currency. I hope, therefore, that you will sell the land and forward me whatever balance may be in my favor from the proceeds, after making proper [illegible]

[illegible] hear by this time the admirable result of our [illegible] I trust it will have the effect also of securing business [illegible] will be done at by and by, and that the Cape Breton [illegible] will soon in our returning prosperity. The Victory [illegible] as important as that of Sebastopol, & the fall of [illegible] more important than that of Delhi. [illegible] Kind remembrances to Mrs. MacPherson & believe me ever

My affectionate friend. Benj. Smith Lyman.

135 South Fifth Street, Philadelphia, 4th M. 1868.

Edward C. Pierce Esq.

Cambridge, Mass.

Dear Cousin:

Thy welcome favor of the 22nd ult. came duly to hand and ought to have been answered sooner, but lack of business has been with me a cause of my delay, and it is now perhaps best to take up the thread again before your arrival here. Thou will be very welcome, dear cousin and friend, and Rebecca will probably detain you as much as possible as Friday night is passed, after it is with the Friday night, this week. Mr. Ridley will be travelling in Iowa here with his family before the 1st of 5th, when the rest of the family will follow after the week.

Thy suspicions are by seeming to speak of going into the iron making business as a profession for life. Engineering, and chemical manufacturing, generally in general. It seems to me most decidedly the best thing for you, and the great object with the Institute will be managed in great part by well educated mining engineers. Such many of the works must be to, as soon as civil engineers are to be had here. And in connection with the mining operations carried there is certainly room for an immense deal of practical and scientific skill as well as invention and improvement. In urging you to take even a humble position in connection with some iron works, I did not mean to recommend you to any lower in the scale than was necessary to get connected in some way with a prosperous establishment; you would quickly pick up any details that you would have got in any still lower position. But if you should hold even such a place as you say your friend does at the Bloomfield rolling mill works, I cannot believe that your employers would long allow you to hide your candle under a bushel. You would almost certainly have a fine chance for learning, writing, and acquainted with the making of iron, and if you may rely on your employers candor it is better than money making; but for money making can perhaps be put best when one's labors are as well paid as he has time for study and freedom from anxiety about his living. This is more likely to happen in such a business as iron making,

the demand for duties and skill is likely to be so very great and the compensation so ample, than in geology that is precarious. Still, a man's taste must be consulted about his business as it must be in the choice of a wife, and if you prefer geology with all its drawbacks, than making gold and for it. Mining proper, if you prefer that, is a good business as times go. is thought to be good there. Your information seems to be that mining Bituminous is better than coal mining [illegible] skill. There is ample room for both, each of which in coal mining, perhaps gain as much profitable as in ore mining; and it has the immense advantage of far greater certainty [illegible] As for geology that is interesting & the geological survey which [illegible] has no official mining agency there in the coal mining. If you go for mining in connection with mining and geology, Pittsburgh & Johnstown certainly seem the most favorable, as indeed it is, perhaps the only one of any kind at present. - There is an opening in the engineer department of the Pennsylvania rail road that I have understood is vacant at present which I think would be a suitable one for you. If you could say you would like it, and I think you would be, I could procure you the place, or at least could greatly promote it. The salary would [illegible] very great at first, but there would be a certainty of [illegible] if the service [illegible] valuable. Your chances of [illegible] in these places under the Company would be as well as the chances in [illegible] would be. As to the duties I cannot speak very definitely of but they are connected with coal and iron and would require mining engineering & a certain extent, they do not fall strictly within the special line. To which I have more for a good while been greatly devoted and consequently are so good for me as for you. They would require also a good deal of travelling back and forth on the road and living at Altoona, which last would be especially disagreeable to me, although not probably unacceptable to you. On the other hand the constant travelling would not be quite so much to you as a married man. For me, the place would put me in the way of geological work and leave me some leisure for it, and it might do the same for you. There was an item current in Northumberland Pennsylvania the other day or two ago, that I thought might give you a few months of work as my assistant if you were willing. But it seems to have fallen through so far as I am concerned.

Nothing more to add from your dear Sir remain

very truly yours Benj: Smith

35 South [illegible] Street, Philadelphia, 5 Nov. 66.

[illegible]:

[illegible] welcome your of the thirty-first came I had yesterday. I am very much obliged by you for the attention you have given the case of young widow James Bowden: and am glad to hear by your [illegible] you and Lizzie the summer. I thought myself that if he could find [illegible] with you it would be in a manner as you [illegible] he would just that reason be content with a smaller pecuniary compensation, not that he might make himself on the whole of more real than hindrance.

I am glad to see by your letter that you are apparently permanently established at Old Stockbridge, and with a good prospect [illegible] of enlarged business next year; and your situation [illegible] an enviable one. It would be so even outside of [illegible], but seems remarkably so in a state where [illegible] does not contain a single dunce. Ken, too, Burbank [illegible] is anticipated again to live in, although Old Stockbridge [illegible] be the most desirable place there. Indeed I decided at [illegible] to keep myself away from Philadelphia and go [illegible] to live myself, on a small salary. If I go to [illegible] Thanksgiving as I hope to, I shall be able [illegible] Old Stockbridge as you suggest and [illegible] on. I have, besides, been wishing for [illegible] by [illegible] relatives in Old Stockbridge again. Do [illegible] believe [illegible] will way. I will try to let you know after definitely before the time comes; but in any case I should be [illegible] have you [illegible] your plans on my account. I did think I might have occasion between this and Thanksgiving to go to Albany, and that I could then stop in your region and [illegible] to Northampton; but I have pretty much given up [illegible].

I send you herewith a photographic copy of a little sketch. I made of a little house in Western Illinois that I took a fancy to while out there on professional business. Business in my line continues very dull, although I have some talk lately of large [illegible] [illegible].

Coe was in Little Falls two or three weeks ago, and I [illegible]

a little of him. As he is now a married man he comes much
[illegible] down to the city than when he was courting his bride, and
when he does come it is ten miles out from the city with [illegible]
the family [illegible] 8000 acres of land in the outskirts of the city,
a [illegible] garden &c. He speaks her as a most excellent, [illegible]
young lady, who lives most contentedly in the country, [illegible]
[illegible] reads, and is interested in natural history, particularly
botany. While Capron has been arrived from Freiberg young
Richter, who was a pupil of his uncle in [illegible], but got from
Prof. Weisbach the idea that he could be educated, and finally in my
time succeeded in getting admission to the Bergschule. [illegible] Hatch
he has gone through the four years course of that school, and
studied two years at the Academy, and now with the help of
Mr. Rammelsberg and professor Cotta he has come to America
under the patronage of Mr. Capron [illegible] paid his fare across.
Richter brought a cask of bitter & Cozé from Weisbach with him
he [illegible] worked at brewing, and Coze took him at once
under his employment and they work up & the manner after
being here a week or so. Coze is beginning to paint his [illegible]
[illegible] specialty of [illegible], at any rate he got the plate sometime
ago from Germany. Mr. Koenig is a young German from Berlin
who has studied at Heidelberg, Berlin and Freiberg, and
has now come to seek his fortune as a metallurgist or chemist.
He is much inclined to go far west in the Spring, says Montana.
He talks English pretty well, but Richter can't a word. Mr Richter
was in Pittsburgh [illegible] in New York, and my midth.
came near in different trains; but Richter managed to find me
each the next morning after his arrival, and we afterwards
met Koenig at Coze's office. The same week came Pettee
lately from Freiberg with the "president" of the Colony there, and
[illegible] from Newton Mass. He staid a few days and then
went on to Iowa to [illegible] through the Eastern Pennsylvania
iron and coal regions. We went to the Academy meeting and
joined Mr & Mrs Capron in a visit to a restaurant for
[illegible] - He seems all that you have after the Academy
meeting when you were out. We came home by [illegible]
in a [illegible] to a beer saloon nearby, after the meeting and
kneipt there until eleven o'clock; and now the letter is over and it
is [illegible] in the morning air, and the engine may be [illegible]
[illegible] Benj. Smith Lyman.

1535 South Fifth Street, Philadelphia, Nov. 1881.

Wm. C. Jones Esq.
Knoxville, Ill.

Dear Will:

I have been meaning ever since my arrival here to write and let you know of me safe return to the East, but have had little leisure for the purpose and have understood that the pile had already written, probably more satisfactorily than I could have done. Perhaps they have left nothing for me to say, but if so their modesty prevented them from telling you of the great benefit their character-lectures, and the personal interviews we had had to attend, to the Swedes. It is not the slightest exaggeration to say that no place or time that has impressed me anything like as much, save perhaps one at Florence, in Northampton; in fact I rather avoid leaving rooms now for fear of dulling the vivid impression. All minutiæ now seem, of course like a bright dream after that animated one, it would seem if I ever can talk. But what shall I say of the appearance of all those young ladies now? After seeing those Swedish beauties I am quite spoilt and carelessly look even at those girls of Philadelphia who used to seem so pretty. I wonder how my travelling companions could have taken any interest in the attentions lavished upon them by the young gentlemen of Chicago, but there living there and then from what I after passing their standard raised aloft by the

golden haired sweetie. It is true that Fanny seemed much out of reflection upon them often we got out to the lakes, particularly in entering Lake Michigan. She might have seen her sitting or lying on a sofa there by the hour together silent and no doubt lost in contemplation of these scenes. Sometimes her face had a look of despair, and once she looked as if she might spring into the water and swim back to Chicago on her way to Niagara. But we got her safely to Cleveland and on to Niagara and she seemed then to take the interest in more prosaically picturesque hilly and mountainous country we came to before reaching Niagara as called to mind the rural, pastoral or surface of Scandinavia and she may have expected that she was going straight towards that favored land. We succeeded in stopping her finally at Northampton and Amy there as far as Boston before she came to a final destination and proper. One thing that made them both comparatively contented for a few days at Northampton was the interesting scientific meeting there. They went pretty regularly to all the meetings there, but not so regularly, as at Chicago where they were models of constancy in the cause of science. In fact they not only attended the scientific meetings there, but were constant attendants at all the evening parties, of which there were five, an excursion on the lake. I left them a day or so at the end of the meeting to look at a piece of land in Henry County for Mr. Jas. M. Barnard of Boston, who had written to me to do so; and I found upon Lee with a photographer a little more than a week spent at Northampton. Give me that regard to Emma, and believe me truly, as well as they love me, with respectful pleasures as one visit at Knoxville, and me from your affectionate friend. Benj. Smith Lyman.

135 South 5th St. Philadelphia, Nov. 1858.

Rev. S. B. Lyman,
Jamaica Plain, Mass.

My Dear Sir,

Your letter of the twenty first September came duly to hand, and should have been answered sooner. I was not disappointed in receiving no invitation to the wedding; for I understood that your house would be crowded with company. It would have given me great pleasure, if I had been possible, to be in the city at that time even if I had gone to Boston; but it was quite impossible for me to leave here. Indeed, I hardly think I shall be able to accept your kind invitation to visit you sometime this winter. Sunny perhaps at as far as Christmas at than Spring time, but even that is doubtful. — I have heard with interest and pleasure of Eva's marriage and wedding trip and apparent evident happiness, and am very glad that she is at last married after so long and tedious an engagement. Not that it was tedious, I suppose, for any thing but its length; but they say that hope deferred is sickening. It always seems a great pity, too, of people are to be married at all, that they should lose from married life a considerable number of their best years in a matrimonial point of view, at least five in her case. I fear she has already gone to Savannah and that I have now no hope of seeing her as she passes through the city.

I sent Uncle [illegible] a letter the other day a photographic likeness lately made for Mr. James Barnard. Please give my love to him and Milly and dear little Clara, and believe me ever

Your affectionate [illegible] Benj. Smith Lyman.

15 South Fifth Street, Philadelphia, Nov. 18th.

Edward C. Hoxie Esq.
Cambridge, Mass.

Dear Sir:

Your favor of the 12th has come duly to hand, and I am [illegible] by its [illegible] views upon [illegible] I had myself. Even if you should become embarrassed in the [illegible] business you will perhaps have no cause to regret that you have studied it. Putting out of [illegible] of devoting yourself to business [illegible] make a [illegible] in England; that it is indeed [illegible] engineering has not been [illegible] by you. You have probably not come [illegible] so much, [illegible] you have studied as if you have given [illegible] whole time and attention to it alone; but you have made [illegible] you can get the rest from books and [illegible], in any one branch.

Perhaps my last letter led you to look on the Penn'a R. R. [illegible] a little too certain. I was so far from being able to [illegible] it to you, that I had not even the chance of talking it myself. I have written [illegible] and heard nothing [illegible] about it; but if I should hear anything favorable or unfavorable right away. If the place should prove to be a desirable one for me I should [illegible] but as it is I think it would be in your favor; but I hardly expect it will; and yet I think it would be a good place for you, and a [illegible] would be a good room for the place, and I should try hard to get it for you. It [illegible] myself it might lead me to the knowledge of some place that you would like.

The grand Survey in N.W. Penn'a [illegible] now probably as far the [illegible] for; and the season is getting so late [illegible] [illegible] [illegible]. It is said, however, that coal men are making a profit [illegible] dollars a ton.

I have come [illegible] to Northampton for Thanksgiving, as you suggest; but I will [illegible] you [illegible] either before or after that, as may be convenient to you. If [illegible] any special [illegible] [illegible] from I will let you know about [illegible]. Yours. Benj. Smith Lyman.

1520

35 South Fifth Street, Philadelphia, Nov. [illegible] 1857.

Rev. Lesquereux, L.L.D.

My dear Sir:

Your most welcome favor of the eighth is just received. I am delighted to hear by it how you are getting on, and that your wife is better.

I am now sending you a copy of the Bernard Foster chart which you ordered, and hope you will be pleased with it. I also send you another copy of a report on a similar section. I should have sent a copy of the report written by Rogers and Knight myself, but I did not like to give offence and withhold it. The lower map and section I drew myself, and the upper one Prof. Rogers. This will account for the great discrepancy between the map and the section. In looking over the report, however, I see that I was entirely mistaken when I supposed that I suppressed all the [illegible] and more, that the coal bed mentioned in it as the first below Beds, as the author of the State Report, was not the Lost Lady's Coal C, and that there was perhaps another coal (B) just above a [illegible] bed of fireclay mentioned as 100 feet above XII. That survey was hasty and perhaps the section is not given quite right in particulars. The Engineer of XII might find by boring as by finding further up into this 100 ft. of "barren measures" and in which I mean as "shaking Sandstone" may be the Sandstone below Lady's Coal B. (near Freeport). But I leave the State Report for more minutely if they were made.

I do not believe that the survey of that part of the state was very thoroughly done. I fancy that you will find the Platina on the map of the Barnard Gold Mining Co. Mt. more in accordance with your views; and you will see that both coal A and coal B seem to have opened near the foot Mtn. of the Knob, and that they seem to be about 50 ft. apart, and that Coal A which seems to be worked two or three miles to the west, seems to be a foot or more thicker than Coal B which is two feet and a half in thickness of fine quality.

Now to answer your inquiries as far as I can. Mr. Lesley has been here some six weeks living at his brother Joseph's ten miles out on the Germantown R. R. and coming in the library every day or two. He is working on the catalogue of the library and means to finish it up this winter, and he is cheerful about undertaking other work at present. About the end of this week he is coming into the city to live, to board at about a third's rate, between Jerome's & Wetherill, and his wife and daughter will join him there about the end of the next week. I have seen Reeve [illegible] and he made some short visits on the way here. They are very well, and Mrs. Lesley says that Mary has changed very much [illegible] Europe, and has become quite a woman of more; but that Peggie seems to have changed but little. Mrs. Lesley's health seems to be rather improving, I should say, She looks very well, but is easily upset by a little over work or excitement, and has to be very careful; more careful than he is to be, and he is now and then laid up for a day or two. Mr. Lesley says that this Pittsburgh Medical Society he read a paper on Mr. Darby, a lawyer who lived here a couple of years ago, & became for a time deeply interested in Masonry. Mr. Lesley says Mr. Lesley's Pittsburgh friends were busy getting up a good number of additional subscribers to the different Courses of the Library, and arranging them so as to suit Mr. Lesley's convenience in making the [illegible]. Mr. Lesley left Pittsburgh the morning before I came back here from there, and declined the proffered position as the salary was not satisfactory. Mr. Hewitt, one of the Bryn Mawr Trustees, who is a Pittsburgher, was appointed to the place by Harris's influence. He will be very glad to hear of your success. His letter of yours. So will Mr. Foster and his family at Williamsport. They were all well at last accounts. I am now pretty busy looking forward to Thanksgiving, which is near, & [illegible] My own health is excellent, as I always is; I have scarcely any work to do [illegible] but I have my prospects for next year better. Indeed, I have had [illegible] some time ago, but all the projects came to [illegible] Now that I am [illegible] Very affectionately yours. Benj. Smith Lyman

35 South Fifth Street, Philadelphia, Nov. 2 1868.

M. Felix Lucas,
Paris.

My dear Sir:

The most welcome gift of your book (Histoire du Travail) came the summer just after I had begun a journey that lasted a number of weeks, and since but just found the leisure to read it quite through. It is extremely interesting and is really an admirable production of very varied information, broad views and skillful writing. As an American I cannot but feel very proud of the praise you bestow upon America and grateful for it; and yet, if I mistake not, while you were here you had no chance to see for yourself that portion of America where civilization is most advanced, that is, New England. It seems as if America were always destined to be better appreciated and understood by Frenchmen than by other foreigners; certainly the best books on America have been written by Frenchmen. I trust that France will, indeed, as you urge, replace her fondness for military glory by better aims, before it is too late.

You have no doubt fully sympathized with us in our grand political success at the November presidential election. It is to be hoped that Grant will prove faithful to the more advanced political ideas which he owes his election; while democrats confidently claim that he will soon forsake his party, and perhaps be even impeached. This time assassination will clearly do him no good, for his successor and Wade's successor would be even more radical than they.

I remain, my dear Sir, Very Truly yours. Benj. Smith Lyman.

I send by me a little photographical sketch of my humble self.

[illegible]

[illegible]

[illegible]

135 South Fifth Street, Philadelphia, March 1868

[illegible] Esq.

State University of Minnesota.

[illegible]

Mr. Lesley has handed me your letter of the 25th of this, and I have been much pleased to learn by it that you have been getting [illegible] later years. I have often inquired of him about you, and heard that [illegible] marriage, and perhaps even of your removal from [illegible] neighbor. But that summer in Chicago I tried to find [illegible] you, if possible, but without success.

I [illegible] that Mr. Lesley wrote you about himself. He will probably not be sorry to have another version of Rebecca story. In 1857 [illegible] you probably knew already he was very [illegible] woman from Rev. [illegible] him, collecting [illegible] pla[illegible] [illegible] Keating's Expedition and writing the "Rec[illegible]" [illegible] Geological Survey of the United States. He travelled about [illegible] good deal in collecting these materials, and J. Lesley and [illegible] Clark, you [illegible] [illegible] Southern and western [illegible]. In 1859, Mr. Lesley took charge of a very large tract of [illegible] forests of pines, near Beaver Meadows in the Anthracite Region [illegible] for his assistants for some [illegible] months. It was a hyper-[illegible] occupation, [illegible] and [illegible] time he was [illegible] with the mountains so that he was only three months [illegible] more than before this he had become Librarian of the American Philosophical Society now, and that occupied him some. What, as well as [illegible] him a small salary, but left him free to be away from home at times; and he still holds the place.

P.S. Mr. Lesley [illegible]

In 1860 the great survey was suspended with it, I believe, was being finished. Geological business was very dull until 1862, but there was probably something of it. In the meantime he became interested in a project for developing coal and iron partly invented by J. D. Whitney & Leslie, partly by himself. They got a patent in which Mr. Lesley had a third interest, and Mr. Whitney, invested pretty much all the money they could in an coal ground and establishment to carry out the scheme; and in the fall of 1862, or even earlier, had lost all. Joe, by the way, had been assistant on the Kentucky state survey in 1859, and after words on the Arkansas State survey, both under Owen, but about 1860 owing to the great dullness of geological business took a secretaryship in the office of the Penn^a R.R., and is still there. Three years ago he married a very nice wife, a Miss Davis, of Ithaca, N. Y., and he has now a little boy about fifteen months old. He lived several years out at Germantown, in the country, but has now been nearly two years living at Rosemont, two miles out on the Penn^a R.R., on a little place he has bought there. In the summer of 1862, Mr. Lesley got relief from the worry about the coal yard, in a trip to Cape Breton to make a topographical and geological survey of some coal lands there, not far from Sydney. Through the fall and winter of 1862 and the beginning of 1863, little geological business was done; only one topographical survey of a coal tract near Pottsville, where I did the field work; but Mr. Lesley always found something to occupy him at the library; for he had begun early to make a complete catalogue of the 30,000 volumes there. You know yourself he has a way of finding a plenty of hard work. In the summer of 1863 he went again for a few weeks to Cape Breton, and in the fall he was sent to Europe for some three months, about some patents and had to travel about there somewhat between the capitals. In 1864, the great geological harvest took place, every body was crazy about mines and oil wells, and Mr. Lesley had that year a taxable income of over $18,000, and in 1865, over $13,000, I believe. The excitement and fatigue, however, nearly broke him down, and he had to withdraw himself partially from work, and in the fall of 1866, by the urgent recommendation of his physicians he went to Europe, and was gone a year and two thirds. He spent most of the time in the South of France, and in Egypt, and his wife was with him. He was at the same time U. S. Commissioner to the World's fair at Paris in 1867. He has written all about his children, how he took little girls and young ladies, indeed many, many times. They have been at home two years. Maggy, the youngest, is about 17 years old, is quite a beauty and very bright and a good dancer. Mary is quite a musician, and a fine [illegible]

35 South Fifth Street, Philadelphia, 13 Nov. 1858.

Prof. James Hall,
Albany, N. Y.

My dear Sir:

Mr. Lesley desires me to write you for him, he is so busy, and ask if you have yet no definite appointment to make with him for his testimony in the lawsuit you spoke of to him; he fears you may have already written about it and that your letter has miscarried.

The Irving survey you wrote me about some time ago has probably been ordered before this; but in case it should not have done so and it is to be ordered, I take this opportunity of begging that you will let me know as soon as convenient, so that I may if possible do the field work before Thanksgiving (the twenty-fifth). I should like to be at Northampton then, and then may be for a week after that. I would also beg (if I am not to meet you on the Irving property) that you would send me by mail the photograph maps of tracts in Virginia that I sent you at the time I went, as I am hardly at liberty yet to let them go permanently out of my hands.

Very truly yours.

Benj. Smith Lyman.

[illegible]

[Rough Draft.]

The bearer of this, Mr. Winfield Scott Caldwell, is now twenty one years old, has been living the last eight years on the farm of Mr. Wm. Perrine at Cranberry, New Jersey, and before that was a resident in this city. Mr. Caldwell's father has lived for many years in this County, is a very worthy woman and has always borne the highest and best of characters; and he is very highly spoken of by Mr. Perrine. I myself am acquainted with Mr. Caldwell, but I have known [illegible] for several years; and I am well satisfied both from all that I have heard and from his appearance and behaviour that he is quite [illegible] and intelligent boy, and would make an excellent waiter, coachman or gardener.

Benj. Smith Lyman.

[illegible] Nov. 1863.

[illegible]

135 S. 22d St. Philadelphia, 13 Nov. 68.

Dear Father:

Your favor of day before yesterday came duly to hand; & I am glad to have been no danger of its having to travel long over the Evening Bulletin. Indeed! all the magnificent prospects for a rousing old time seem to be in Indian Summer; with Hark, the Herald Angels sing no longer, they have probably been dispersed too. — I should be glad to keep Thanksgiving with you, as you say, and have been hoping to do so; but I am not sure that I shall be able to carry out the plan. I shall try, however. Nothing known definitely whether I can come or not. — Our circle here seem to have a great variety of pleasing places. — Fin will no doubt have a clamoring visit from Aunt Susan and Mr Phillips, and I am anticipating much pleasure from seeing them here again. Ever since the beginning of September I have been taking the Springfield Republican, and am therefore well posted from day to day in the news of the valley as well as the Commonwealth generally, and have seen in it already some of the signs of which you speak. I should think it would benefit Northampton somewhat, but am not very competent to form any opinion whether it would be as in a degree equal to the risk of advancing three or four thousand dollars towards the stock of the road. I should think the road might perhaps pay, especially if the general thoroughfare to Boston should be built. It seems now almost impossible to get private individuals to subscribe towards building a railroad, especially certain men who are largely interested in property along the line, and to the community in general get indirectly as well as directly valuable advantages from such roads, if some favoring influence could either by loans or corporate aid secure the ability to build the desirable travels from. The members of the Legislature are perhaps more competent to decide such a matter than the majority of the voting Numbers. I did not suppose there was so large a number of Irish voters in Northampton as to have a very great influence upon the decision of such a matter. I see by Hampshire County was the Hunker County at the last election, and that only one man in seven took active part

Last Friday I went out to Media with Dr. Elwyn to see the school there for feeble minded children; he is one of the trustees and went there to a meeting of the board and as I happened to call on him the evening before he asked me to go with him. There were some others outside of the board beside myself, and some ladies among the rest. We all looked on at some of the exercises of about eighty of the children, chiefly gymnastic exercises; and they did very well and kept very good time with the music of a piano. The children did not have so disagreeable a look as you might expect, for their expression becomes more intelligent as they become educated a little. Some of the children even looked as bright as children I have seen in common schools. Of those we saw about half were boys and half girls; the whole number in the school is about 160, of whom 80 are state pupils, 12 Philadelphia city pupils some New Jersey state pupils and some Delaware or Maryland State pupils and some private pupils. When the board went into meeting we outsiders went to look at the sleeping rooms, hospital room, and school rooms. Everything looked very clean and smelt clean, but from the number of beds in one room, sometimes even eight in a room of moderate size, it seemed likely that the ventilation could not be very good in general. As visitors were expected that day, things might have been aired well on purpose. But they said that there were very few cases of sickness. They gave us a lunch, and then the whole from Philadelphia hurried off to the cars. At the Rail Road Station however I parted from them in order to see a little of Media and the surrounding country, as I had never been there before and the weather was very fine. The school was a mile or so from the town, a large building in a fine position on a hill with a grand view. The assistants of the school by the way, were all Massachusetts girls, one of whom from Weston, quite handsome, was married to the principal Miss Wheeler (a Swedenborgian, as Mr. Sturgis afterwards told Dr. Elwyn) had effected a change from the drawing of the school. I strolled about Media for nearly an hour and as I was unwilling to leave the place without entering any house there I called at Miss Eastman's famous girls' boarding school where if Miss Lucy [illegible] sister to my flame Mary, of Exeter, was not teaching there as I understood she was when I was at Exeter two years ago. To be sure I had not known her but to slight her, but I knew it might feather better news. It turned out that a [illegible] of Portsmouth had been teaching there five years ago for [illegible] but she had retreated in disorder. I walked back to make this [illegible] three miles, of which I walked eleven in two hours and thirty five

135 South Fifth Street, Philadelphia, 17 Nov. 1865.

Miss Jane Keyser:

Your very welcome favor of the twenty-sec. of last month is just at hand. I have noticed with interest your advertisement in the Journal & Pilot, and have heard indirectly from time to time a word or two about your new undertaking; and am very glad now to have a little fuller account from you. I am glad we have that you know something of Hattie's whereabouts, and if you should see anything of him, please remember me & him most kindly. I heard of his being at the Missouri Iron Mountain and afterwards at St Louis, and of his holding a lucrative position to light up a robber somewhere on the plains while some Indians chased him; but I had no idea that he was now in Montana. Mr. Cooper last told me about thirty, or had been the last existent in so many papers. Cooper was here last Christmas for a week, & went home & captivated [illegible] relatives, and was often took about some iron mining & smelting in Westborough, Mass, at the Cowee Iron works; and he is still there. He had been for three years in Lake Superior Copper Region after coming back from Mexico, & had made various short journeys in different parts of the country on professional business; but left with the exception of a few months. Jackson, at last accounts, was still up in the Lake Superior Region, where he had right after his return from Mexico. He was to take a year or [illegible] that he had introduced his car into use at the mine & had charge of it, and that the miners did not like it. You have probably heard of the car mentioned before. Cope is managing the mine he opened in the Au Train Region, on a company that owns a small portion of his ancestral acres, and he has been there ever since he came from Europe. A year ago he used to come often to this city but his visits culminated & terminated in his marrying an excellent young lady and his business, and he now comes here much seldomer, for he is content to live up at the mines. He is just getting out a translation of Weisbach's great book on Mechanics, with the encouragement and help of Weisbach himself. Cope has just taken into his employ a young Kentuckian who

was a professor at the Mines in Freiberg in our time, and was then just beginning his studies at the Bergschule. He has been befriended by Humboldt who Humboldt was the first to give him the idea of getting an education; and he has now studied 6 years at the Academy after finishing the four years course at the Bergschule. He was brought to this country by Dr. Koenig a Freiberg Student who had some [illegible] of English and some money with Richter had previously left Freiberg, and he brought a good letter from him back to Cope. Koenig is a chemist and metallurgist and is looking forward to getting to Montana in the Spring. He has studied at Heidelberg and Berlin as well as at Freiberg, and is well posted up in his branches. If you happen to know of any opening for him out there, please let me know. — Do you ever hear what Stevens and Herreros are doing? They say Obando has finally left Freiberg.

As for me I have been mainly occupied since coming from Freiberg in the same kind of work as before, namely geological and topographical surveying. The gold excitement in Pennsylvania, near Pottsville, the next Spring I went for the same work to Cape Breton (Nova Scotia) and staid there until winter; then I went out to California from here and after staying there about eighteen months came back overland, with ten days at Washoe, a day at Salt Lake City and a few days in Colorado Territory; then I was employed in Cape Breton again until the next winter; then I was occupied with mine surveys in Pennsylvania, in the mountains, sometimes in Virginia and other regions, with my head quarters here. For the last year or two business has been very dull in this line, perhaps even more so than in business generally. Indeed this brings me to the answer to your question as to whether "our Philadelphians have learned wisdom yet." They seem to have done so, far enough to steer clear of mining enterprises in general, but more particularly gold and silver ones, at least for the present. Perhaps there will be by and by a newer set of men arrive who will try their hand at all kinds of such projects as happened two or three years ago. They lost a shovel money then, but they are determined at least to lose no more in the same way. There are however some people here interested in gold and silver mines; but I know scarcely any of them and am quite unable to say whether there is any possibility of making in Philadelphia good paying or well promising mining prospects. A mountain — Railroad by the way has been established for a year or two with Wilkesbarre, has grown very fast and is doing a good business, I believe.

I send you a photograph of a little map of mine made lately, of a small tract in Illinois.

Very truly yours. Send back by ...

135 South Fifth Street, Philadelphia, Nov. 1865.

R. W. Raymond, Esq.
Editor of the American Journal of Mining,
New York.

My dear:

When my credit with your paper on account of commissions [illegible] is exhausted by my advertisement and subscription I must [illegible] on the [illegible] you proposed last winter of reckoning [illegible] dollars for each column contributed. Please stop the advertisement, as that will may not be running up a debt; and, if convenient, send me your account.

Ingersoll, as ever,

Very truly yours.
Benj. Smith Ingersoll.

On Smoke Burning.

To burn fuel in the most economical way it must be supplied with enough air but not too much. If there be not enough air, some of the fuel escapes not thoroughly burned in the form of gas, either carbonic oxide or hydrogen. If there be too much air, it carries off a certain amount of heat uselessly through the chimney.

The air may be supplied either wholly through the grate, or partly through the grate and partly above the solid fuel. The air supplied above the solid fuel serves to burn the part of the fuel that has been turned into a gaseous form. It is just as possible to keep the air always right, so proportioned to the amount of solid and gaseous fuel to be burned, whether the air be furnished wholly through the grate or partly above it.

The amount of air supplied through the grate in a given time should be suited to the thickness of the layer of solid fuel and to the size of the lumps, that is, to the surface of the fuel exposed to the action of the air. The thickness of the layer need not vary very much if the charges are small and frequent; it can be quite uniform only when the charging is continuous, when as much fuel is

Our Friends Discussing.

Copyright, 1903, by Charles Scribner's Sons.

"I know what I'm talking about," said Mr. Bangs, with a slight frown. "I've had to do with the matter myself, and I've had to do with it for a long time. I've had to do with it for a long time, and I've had to do with it for a long time. I've had to do with it for a long time, and I've had to do with it for a long time. I've had to do with it for a long time

the are on each instant as is burned up each instant. If the lumps are of various sizes, as in soft coal, there may be some trouble in regulating the draft so as to make the burning perfect; but if the lumps are never very large, those at one time on the grate do not vary much on the whole in size from what are there at another time.

With soft coal the part of the fuel to be burned in the gaseous form is especially large just after the charging; so that more air should be supplied at that time (whether through the grate or above) than should be a little later. But if the charging be in very frequent small quantities or even continuous, the gas will be very uniformly given out and the supply of air may be kept uniform. With common charging, if the lumps of soft coal that have caked together by the heat be broken up from time to time, the gas is also thrown out more uniformly, so as better to suit a uniform supply of air; the size of the lumps is also kept more uniform and the passage of the air less irregularly obstructed.

Opening a door above the solid fuel in charging lessens the draft through the grate, so as to make the fuel burn less thoroughly and give out more of the combustible gases than common; and these

one further added to if soft coal be thrown on at the same time. This fresh fuel likewise cools down the top of the fire and the space above it; and a great draught of cold air passes over the fire at the same moment; wasting the heat and carrying off the gases to cool & burn. Loss from this cause is less with frequent small charges, because there is greater uniformity; and less too if they are thrown on only near the door, so that the gases from the fresh coal pass over the hot fire beyond; and it does not take place at all in continuous charging or when the charging is done without opening a door above the solid fuel.

If the fuel lie very thick upon the grate so as to be far too much for the air let in, the available part of the fuel will be wholly changed to carbonic oxide; and as the mixture of resulting gases will be on the whole uniform in composition, a uniform jet of it from a receiver of considerable size can be burned completely without waste of heat by an easily regulated uniform draft of air.

19 Nov. 88.

Philadelphia, 19 Nov. 1800.

Dear Sir,

135 South Fifth Street, Philadelphia, 20 Nov. 1858.

Dear Father:

Mary's letter of Wednesday came to hand yesterday, and I am sorry to learn by it that James thinks seriously of not coming to Northampton for Thanksgiving, and does not even hold out a prospect of his being there at Christmas. Miss Shawgreen says she is determined to keep Kimberly during the whole time I have been away, even if I could be there but two days; and I have hoped that this year would not be an exception to the rule. Indeed, I am so much engaged at present that it seems worth while on the whole to ask a little help from your friends if. I am in daily expectation of a remittance from Uncle Burton, an account of the sale of my land which I ordered some little time ago, and an order had already been made for the last. If it should come before next Thursday or Wednesday I should have the pleasure to devote a small portion of it to a trip to Northampton, as I have done before, having still something else to live on through the winter. But if the Cape Breton money should not come until a few days later it would be pleasanter to lose the excursion; and I would therefore be very much obliged to you (if you could find it convenient) if you would send me a draft for fifty dollars. I shall hardly be able at any rate to leave here before Wednesday, as Mr. Hall writes that he will not be here on Tuesday or Wednesday on his way home from Washington, and I should like much to see him. He says he will "explain about that little jet ornament of ours on the Hudson river, but does not say whether it is quite given up or not; most likely, however, it is, and he means by explaining why.

About ten days ago came a letter from Mr. Tuckerman that I forgot to mention in writing to Mother Hawley. After speaking of some geological matters, he says: "If ever you have a short moment of leisure to think of and speak with your old friend of Columbus, please write me and endeavor in the light of possibility to the following inquiries: 1st. How are you yourself? How is your health good and are you passing festive Nov.? 2d. How is your revered father and your whole family? How is your wife? Give my kind love to her. Kindly recall me to her remembrance and [illegible] 3d. How is our friend Lucky Joe. And how is [illegible]

[illegible]

35 South 9th Street, Philadelphia, Feb. 4 /

R. W. Raymond Esq.

Editor American Journal of Mining
New York.

My dear Sir:

Many thanks for your kind favor of the 2nd inst. just at hand.

The Comstock Lode Report you see is pronounced a humbug, an old story now and was what merely appeared (in medical phrase) from the new photographic map of the Comstock Lode in Storey Co. Nev. Some copies of the Comstock Report are bound with the map; perhaps one with a map was sent to you & you overlooked it.

To tell the truth I felt rather piqued from any "mineral claim for an article was rejected" by the fact that an expression had carefully avoided bias in the printing inserted in my article on the Virginia City last summer, and no notice was taken of my [illegible] thereof. You know you expressly make the writer responsible for what appears under his name, and what he writes ought therefore not to be changed. It was not a matter of much consequence however, and if you want never do so no more I may possibly condescend sometime to boil over just to say a word in your columns.

Very truly yours.

Benj. Smith Lyman.

[illegible]

[illegible]

[illegible]

3813 Ste Fe St Philadelphie, le 3 Novembre, 1886.

Mon cher ami,

J'ai vraiment honte de n'avoir pas plus tôt répondu à votre bonne lettre du [illegible]. Si l'on ne répond pas à une lettre tout de suite, mais la diffère, on trouve toujours de nouvelles raisons pour la différer encore de jour en jour et de mois en mois. — J'ai été bien aise d'entendre de vos nouvelles, votre grande activité dans la géologie, tant en course qu'en la grande exhortation; et j'espère bien que l'on va poursuivre la grande carte géologique pour la France entière. Je voudrais bien avoir cette belle carte du tiers de la France déjà finie. Je lis toujours le Bulletin de la Société géologique, j'y ai trouvé quelquefois intéressant avec plaisir mais il est généralement fort en retard. Je viens de finir la lecture de la livraison qui n'est arrivée également au commencement d'octobre, et contient les communications faites le 2 Mars seulement. J'ai vu avec plaisir dans cette livraison que l'on va recommencer un peu les communications qui étaient trop longues. Il arrive quelquefois que les auteurs ne sont pas assez concis pour profiter; j'aime mieux la nourriture un peu plus concentrée. — Je vous suis très obligé de votre complaisance envers mon ami et parent Mr Howe. Je ne l'ai pas vu depuis son retour en Angleterre (en juillet), mais il m'a écrit plusieurs fois. Il est [illegible] à Boston tout de suite après son [illegible], et là pourquoi il n'est plus tout à fait content, il est trop occupé à [illegible] avec sa "Hurdle" comme on dit dans le Bearn. Cela me rappelle [illegible] ce que vous disiez [illegible] de mariage pour [illegible] des mines dans vous ne m'en avez jamais parlé. L'un [illegible] est marié au mois de juin à une jeune fille de Philadelphie. Elle est d'une bonne famille qui est riche et intelligente, elle est elle-même intelligente et bonne, elle aime l'histoire naturelle et a contribué la connaissance; et elle et son mari demeurent près des mines dans des montagnes. Cope vient ainsi bien moins souvent à la ville et à la société bien souvent. Il va publier prochainement la traduction de l'ouvrage sur les machines de M. le professeur Reuleaux, de Freiberg. Cope est toujours bon garçon malgré qu'il soit marié. Je compte aller [illegible] quelques jours à sa mine et faire la connaissance de sa femme allemande. — Whitfield travaille à Brooklyn, [illegible] de caractère. Lui aussi il est marié comme vous le savez sans doute, depuis quelques années à une femme allemande qu'il a trouvée en France. Elle est jolie, toujours malade et a beaucoup de [illegible] qui sont aussi je crois maladifs, mais je n'ai jamais vu de famille. Il est [illegible] il y a deux mois mais je ne l'ai pas vu

A propos du bulletin de la société géologique, n'y aurait-il jamais une livraison pour la réunion extraordinaire de 1865. Aucune ne m'est parvenue et si elle est parue auriez-vous quelque jour la bonté de me la procurer. Celle-là est la seule livraison qui me manque jusqu'à la livraison dernier, et j'ai toutes les autres livraisons de réunions extraordinaires, celle de 1867 y comprise. — Vous ne m'avez rien raconté de vos belles courses géologiques de l'année passée. La Société n'en a pas eu en 1867, mais l'école des mines en a probablement eu. Peut-être vos courses fréquentes pour le grand ont fait sembler comme peu de chose ces grandes courses annuelles! Est-ce que M. de Beaumont fait encore le grand cours de l'école; j'espère bien et qu'il la fera encore bien des années! M. de Chancourtois y est sans doute toujours; et M. Lamé aussi va-t-il avec les autres comme ami des prospecteurs ou non plus professeur lui-même. Je voudrais bien le revoir encore et sa vaillante famille. Ma parler d'un retour quelque jour en Amérique ne peut entre vous avec sa famille [illegible] de sa femme! mais je n'ai pas entendu qu'il fût déjà revenu. Quand il y était, il y a plus de trois ans, j'étais malheureusement au Cap Horn, et je n'ai pas eu la joie de le voir. — Cette année j'ai bien peu de chose à vous raconter en fait de voyages. Mon mariage a été [illegible] a été. Il y a eu bien peu de négoce ces deux années passées, et mon métier a spécialement souffert, parce que l'on ne veut plus prendre de l'argent dans les mines avant après deux années où presque tout le monde a spéculé de l'argent dans des mines de toute sorte et dans les puits à huile de roche. On est maintenant si timide à cet égard qu'on n'ose même pas essayer les meilleures mines. Dans ce moment-ci, cependant, l'exploitation de la houille et de l'anthracite est bien prospère, l'exploitation du fer l'est aussi, et dans le printemps prochain j'espère un meilleur état de choses en général. J'ai resté tranquillement chez moi presque tout le temps, mais l'été passé je suis allé en voyage pendant six semaines, d'abord à mes parents à Northampton et puis à Chicago dans l'Illinois, où j'ai fait visite avec une de mes sœurs et une cousine de Northampton chez deux de nos cousins qui sont mariés là-bas. Pauvres [illegible] pour ne voir ces immenses [illegible] comme cela a été [illegible] Nouvelles! Quelles [illegible] un grand voyage. Nous sommes allés par le Michigan et nous sommes revenus par les grands lacs Michigan, Huron et Erie, et les montagnes de Pennsylvanie.

En espérant bientôt de vos nouvelles, je reste toujours votre ami dévoué et dégoûté.

Henry Smith Carmen

135 South Fifth Street, Philadelphia, 23d N. 1861.

Wm. Edward Pierce.

Dear Ewd.

Your favor of yesterday is just at hand. I think it pretty certain that I shall go to Northampton this week, probably on Wednesday; but if any thing should happen to prevent my doing so I will telegraph you at once. — The difficult & interesting work at Harpers Ferry & Martinsburg will fall in Mr. Wilkeson's and Stanton's region. Should the rail roads & telegraph lines there be destroyed, as they probably will be, I suppose they will be rebuilt by the Government. The whole country is probably so much disturbed by the secession movement that it will probably be quite a long time before it will be safe for any engineer to go there, except under the protection of troops. I should think Pittsville would be a good place if you can get upon Md. Central R.R. but it is not to be found on the Engineering Corps list. I shall probably be back from New England in ten days, if I go there: but I will let you know more precisely when I am coming if you will let me know where to address you a week or so hence. Until the end of this week I might address me at your place, in care of Henry Foster & Brother Hampton.

Very truly yours.
Benj. Smith Lyman.

135 Smith & Fifth Street, Philadelphia, Nov. 1885.

Mrs. D. S. Laird,

Hallowell Street, above Broad.

Dear Sir:

Please send me half a ton of Lorberry Coal, egg size, as free from slate as possible. If Kine is a Lorberry Bed, please send the finest burning coal you can. Please send it this afternoon without fail, as I am to leave early tomorrow morning; and send the bill receipted.

Yours truly,

Benj. Smith Lyman.

[illegible]

[illegible]

[illegible]

135 South 7th St. Philadelphia, 24 Nov. 63

Dear Father:

Your favor of yesterday enclosing a check for fifty dollars is at hand and I am much obliged to you for it. — I shall probably reach Northampton tomorrow evening by the late train.

Love to all.

Your affectionate Son.

Benj. Smith Lyman.

1358 N. 17th St. Philadelphia, 24 Nov. 1877.

Mr. Richard H. Allen,

My dear Richard:

Your kind favor of yesterday is this morning at hand.

I am sorry to say that I shall not be able to accept your invitation to lunch with you this evening; for there is a prospect of seeing here today a gentleman on his way through the city, whom I wish very much to see. I shall therefore start tomorrow for Northampton, and if I find time I will see you a minute as I pass through New York, at your Country room; but it is quite likely that I may have to hurry up to the Northern Station right away. In that case I will only see you on my way back; which may not be for ten days or so, as I wish to remain for a time with wife, if possible.

Affectionately yours.

Wm. H. Furness

135 S. 4th St. Philadelphia, 24 Nov. 1873.

Mr. W. S. Laird,

Dear Sir:

If you will attend this afternoon the [illegible] of Lotbery (on Merrick Fee turning) and oblige Yours respectfully; I beg you will call tomorrow before noon. My son Edward will be here until Wednesday, and will pay the bill, if you will be so kind as to send it straight.

Yours truly,

Benj. Smith Lippincott.

[illegible] 1855.

[illegible]

My dear [illegible]:

Enclosed I send [illegible] of Lancaster [illegible] which [illegible] I think [illegible] [illegible] [illegible]

135 South Fifth Street, Philadelphia.
10 Dec, 1888.

My dear Gray:

The bearer of this is my particular friend Mr. E. R. Hunt of Cambridge, whom I have spoken of to you the last three years as a student at Trinity and Paris. He is just getting out in a little trip of his northward again; and should he be able to go to Boston, I am sure you will find him a very agreeable acquaintance. Any kindness you may be able to show him, such as letting him see your mines or the like, will be reckoned a special favor by

Yours very truly,

Benj. Smith Lyman.

1875

35 South Fifth Street, Philadelphia, Dec. 1868.

H. Fremont Esq.

Dear Sir:

Your favor of the fourteenth of last month with the enclosure of a private letter and of some extracts for Dawson and myself came to hand through the kindness of Mr. McGuire on Thanksgiving day, at Northampton; from which place I got home last night.

I have not yet seen Dawson's book and am much disappointed from the tenor of the interesting passages you made. It would seem from these passages as if I must have faith in Mr. Moseley's statements and geological skill then in Mr. Linley's or mine, and as I trust more so than Mr. Dawson's conjectures made before the Glace Bay and Cow Bay region were surveyed then & the thoroughly proved results of Mr. Linley and my three seasons work. When Dawson has spent as much time as we have done there with a compass and chain and theodolite it will be no presumption in him to differ from us in regard to the geology of that region; but he will not with it then.

With regard to the map you suggest my making of the Joggins and Minudie coal region, you know that the field work and plotting done there furnished important information in connection with your claims; but that a finished map of it would be of so little comparatively to you that I could hardly recommend your going to the expense of [illegible]

121

Sixty-first Street, Philadelphia, Nov. 20th

J. N. Macgowan Esq.,

Sydney, C.B.

My dear Sir:

I was much welcome yours of the eighteenth of last month reached me a short time after the Thanksgiving dinner. How have you passed the Thanksgiving? I always pass it with a thanksgiving at that time when I am at home in this city, even if I have to come away again within a day or two. This time I made a longer visit than usual and yet have only right before that for the reason that I had written a little visit to my friend and College chum Mr. Lenbore, who lives near Phillipsburg, and I made a short visit at my uncle's [illegible] one of the editors of the Spring. Upon this occasion I made a short visit at my uncle's [illegible] you can imagine how I have. Letter writing is apt to be very much neglected while working hard, and so I have put off writing you until this time. This, by the way, is my birthday. I am thirty-three years old. I should have written an answer to Brown's letter with the pricing that he wished returned; you can send the answer if you like. — I am sorry that Hamilton backed out of his offer for the land, but if Lovegrove will offer the price of seven dollars an acre for it, so much the better. You have been very faithful and kind in looking to my interests thereabouts, and I feel very thankful for it. Mr. Estes Howe & Mr. Conover were here the four Sundays we have been at home, and they seemed to be very hopeful in regard to the business prospects of the Cape Breton coal country. If business there should speedily revive, as they hoped, it would probably raise the price of the land; and if a rail road should ever be built to Sydney or to Mr. Conway's mines, or to the main line would pass through the lot of land, and it would be worth in view of that I took it originally. It seems as if such a road must sometime be built, although it may be years before it is. The mistake in the description of the lot in the grant is clearly a clerical one, but I agree with you that it is not best to have it set right. Probably the sketch that goes with the description shows what was really meant.

The season with you is [illegible] about as far advanced as it is at Northampton. We had had four or five snow storms before Thanksgiving, most of them quite trifling, and the ground was bare then; but last Saturday came nine or ten inches of snow fell and we had sleighing the next day; and it snowed again on Monday but turned to rain afterwards so as to leave the sleighing poor in the town itself. Sunday afternoon Henry Hinckley my old schoolmate, now merchant & translator at Leghorn and Nice, at present home, took me & my two sisters and me on a long sleighride with his fine pair of horses. He is a very good fellow and the most agreeable companion of the male acquaintances in Northampton. I have probably spoken of him to you before and of my meeting him in Europe, where he then was completing his studies in medicine, after graduating at Yale. His father's name was originally Hyman, but he changed it as a condition of a bequest of his maternal grandfather. He is of Hinckley-man family, whose is very different from mine; for you must know that Hinckleyman, first came to Northampton soon after the first arrival in America and died there in 1631, so that his time for widely extended branches of the family to spring up. Henry Hinckley's uncle all took the name of Hyman, but his aunts some of them were pretty beauties and all married. The handsomest of all married Aaron Hyman of Cincinnati lately president of the Bank, but now no longer there. A cousin of Henry's named Richard still lives in New York and keeps a large store for the sale of Agricultural tools in connection with his father and in connection with a manufactory in Brooklyn. Richard was also a schoolmate of mine at Northampton and we visit each other sometimes. He is a bachelor and his mother and father and brother and sister [illegible] Hinckleymen (Henry) have been traveling in Europe for some time. I see, the Hyman name must have stood well in respect to beauty as Henry's aunts and mine were young in my aunts Mrs. Delano and Mrs. Lesley were very handsome. Mrs. Delano is now living again with her family at their country seat New Burgh on the Hudson a few miles. Mrs. Lesley and her two daughters Mr. Lesley has just before Thanksgiving and they turned the winter quite [illegible] time. The two girls have grown famously since I saw them last year, and the elder, now fifteen, is as tall as I am. [illegible]

Please give my best regards to your wife and niece and believe me
Your very affectionately yours. Benj. Smith Lyman

35 Sansome St. San Francisco, Dec. 1888.

W. H. Hurd, Esq.

My dear sir:

Your favor of the fourth duly came to hand and until now I have been quite busy in court all day and every night. I was disappointed in seeing Mr. Irwin yesterday and said not a word to him, as I would wait for the delivery of the deed, and I would name a day, to him, when I would be at his office, but I will be back on my judgment that I will be there some time after the third of January. I have told your lawyer that I should appear and argue my motion for a new trial on the first day of the term and he says that will be done as a matter of course. If not, I would have to make some application for the appointment of a receiver, which could be made by your lawyer here, Mr. Harney, as it would be a special matter. I have written to have one of the attorneys of the company here to look after the matter. So you see I am using all the precaution that is necessary in order to protect your interests. I am very much pressed for time, as I am in the midst of preparing my argument for the motion for a new trial, which I have to file on the first day of the term, and I will be very busy for the next few days. I will write you again in a few days.

Very truly yours, [illegible]

I have discovered today such an architectural journal as you inquired for the other day. It is "Howe's Architectural Review & Builders' Journal, an illustrated monthly; conducted by Edwin Howe, Architect, assisted by Chas. J. Lukens, Philadelphia, Chapter, Penn. Yorkshire, 5 19 82, Albert Street. The numbers for March & April are published volume.

135 South Eighth St, Philada 14 Dec. 1864

Dear Mary:

The evening I left Northampton I went straight to Uncle Edward's and was pleasantly welcomed by him and his wife although not expected that evening. I arrived there about half past ; a little before tea, which is a light affair and served in the library, near that they dine about six o'clock. The boys Frank and Jo came in from an invitation and had a few minutes with me before going up stairs to their evening studies. Frank looks remarkably like Uncle Edward, and Jo is somewhat like Sarah. I was some possibility of their coming over to Northampton in time ? holidays; perhaps only a special invitation was lacking to decide the point either way. Uncle Edward and his wife had determined that evening to go to a party, but would have taken me with them if I had been so inclined and had been successfully with me. They often provided with great numbers of large Envelopes for Graphic Work at, and Jo made me some drawings until it was half past ten, and the party was some hours or so getting started. After breakfast the next morning I was entertained most agreeably with some photographs and with pictures of objects in Pennsylvania Dutch, while the different members

Girls. Jennie were about their various occupations. Aunt Kate (or Kitty, I can't remember which it is agreed to call her) had to go to the meeting of her gentlewomen's friends society; I had to study upstairs and in the middle of the morning Ezra & the Superintendent with some of his Sunday Carving who stay there with a fine intent to show off their large photographs, particularly some night views they have a machine called a megalitoscope (which by diligent examination of my French dictionary would seem to mean great reality shower) & this planned by the large windows in the dining room. I stayed until after lunch which happened about one o'clock, as I could not be very [illegible] of finding business amongst their offices until near that time. I went Richard Allen and Mr. Delano and came to Philadelphia in the four o'clock train. Mr. Delano seemed very well and said all his family were in usual health, and that if it were not for the cold weather he would like to take me up to Algonac to spend Sunday and Monday there. But my notice was far enough already in Philadelphia by that time, as I had checked it through from Springfield. Any how, I was very much upset & nervous before I got back to see that I had gone forgotten to speak to him about taking that Maple Sugar to Brotherly Love. It might just as well as not have been wrapped up in one of the bundles I carried in my hands, and I should have been glad to carry them. I had trusted to somebody else speaking of it, and my own mind was so taken up with such a multitude of immensely weighty affairs that to forget this one.

The ladies here seem all to be in usual health except Mary who is laid abed with a "Catarrhal fever," but is I believe doing better now than two or three days ago. The Miss Ingersons are thriving well in all respects, and are debating whether to go to Worcester or elsewhere for their Christmas holidays, which begin next Friday, or the less extravagant. They celebrated my birthday for me unawares last Friday evening, when I was treated with wine and lollies and sweet crackers, but I forgot to mention it in fortunate after the occasion until it was too late for them to toast me suitably. Give my love to all. Your affectionate Brother. Samuel.

35 South Fifth Street, Philadelphia, 14 Dec 80.

Dear Sanborn:

You will reach you probably to-morrow as you birthday. Accept a thousand congratulations and wishes for many happy returns of the day.

On my return to Northampton, the day we parted, I found Uncle Edward had not yet arrived. He was expected and he came down to New York the next afternoon according to previous plan but I concluded to stay over until Monday, to avoid the necessity of spending Sunday in New York. Also I found that Mr. Warren Delano, whom I had hoped to see in New York and who had written me a message of like tenor by Uncle Edward, was in New York only from Saturday night until Friday and he was at Tarrytown on the Hudson near Newburgh. Sunday morning I had a chance to take some exercise in connection with travelling and that afternoon Henry Hinckley took my sister and me a long ride. Monday the weather was threatening and snowy enough to give me an excellent pretext for staying over Tuesday at Northampton; but Tuesday I concluded to be no reason for not going, and go I did. I was not at all discouraged by finding as I went on toward Albany that the snow was less and less as I was nearly to be on the side of the Hudson, and the storm of the day before had evidently been a rain storm. I spent the night at my Uncle Edward's in Brooklyn, the first time I had ever slept in his house; and was much entertained with a great number of large photographs he had lately brought home from Europe. He married, you know, a second wife some three years ago, a very pleasing lady and they and the children have lately come home from a year's travelling in Europe. The eldest son, Jo, is at Harvard College this Summer. He is a very good fellow, and will be well fitted, and will be ten years old or so. He graduated well at the Brooklyn Polytechnic School a year or more ago. On Wednesday after lunch I visited two of three boys

Could you send me a line a day if it would not be too much trouble? I would like to know how you are getting on in Albany & how long you intend to stay.

a room in Hartford and take the four o'clock train to this city. My original leave was just a fortnight from to-day I set out, & with in spite of my unpleasant delays corresponded well with my predictions of ten days or a fortnights absence; for I had thought of coming back by way of Albany and of visiting Cooper's at West Point on the way, and also my Fonda & Bridge relatives; but I had learned by a letter at Springfield that nothing was to be gained by going to Albany. On my return therefore I was to spend that & round the city illuminated as usual on the occasion and a grand dinner awaiting for me at the head of the table at a restaurant. The public had also taken care that I should not be worried and annoyed with interviews immediately on my arrival and it is still carried out, leaving me some leisure.

The Weekly Republican came Saturday and was thoroughly perused that evening, except perhaps some of the political articles. Among the letters, however, I read one on women's rights which just touched upon one point that had occurred to me and does not seem to be mentioned very often. It has struck me that women were shut out from voting in the first place perhaps because fighting was the main business of the nations or tribes, and it seemed only fair that those who did the fighting should decide whether it should be done. Those who had to perform the military service might not like to have this duty forced upon them by women who would not share its trouble. Wars do not yet altogether cease, but have become a very subordinate feature of republican governments and are perhaps even more disliked by educated women than by the men. But such ignorant women as are common in the south would perhaps by their sympathies have been even quicker than the men to begin the war if they could have done so by voting. Of course the spectacles and inconveniences would be somewhat lessened if women were always dressed like men and were trained more like men. The last [illegible]

It has been quite cold but for some days perhaps as cold as fifteen degrees above zero, but the ground is still free of snow. Give my love to all.

Very affectionately yours. Benjamin Lyman.

To the Morning Post.

Dear Sir:

You have been misinformed about the action of the Franklin Institute last night. It did not adopt resolutions condemning international copyrights, but merely declared some resolutions in their paper to be out of order, as not coming within the general aim & scope of society as a scientific body; although they might be of interest to the members as citizens, men of business, book writers, printers or readers, just as the tariff or the government finances might be.

The merits of international copyright were not at all decided upon by the Institute nor even discussed, except that they were very positively asserted by the proposer of the resolutions; and your views seem to agree with his, for you say "the question does not require a single argument." But one member of the Institute and constant reader of your paper would like to know what the essential difference is between copyright and a patent right; and why both are not, instead of natural rights, rather mere privileges granted by the government to encourage authors and inventors to make their productions public; whether the very term provinciæ "these privileges does not go to show that they are not natural rights"; whether the copyright did not long go explicitly by the name of privilege ("cum privilegio"); whether it is not simply a matter of expediency if native or foreign authors or inventors be encouraged or not by special privileges; and whether it is expedient to tax all readers of foreign books for the still further encouragement of foreign writing. And not the inducements for publishing, both at home and abroad, very large already; so that, for example, the American author you mention has no right to feel "victimized" because Germany and England never offered him the special privileges held out to them by our own code? Has the lack of such privileges in the past of these writers probably deprived the world of a single line of their excellent literature, or lessened its excellence in the least?

17 Dec. 1868. L.

[Real name and address, not for publication:

No. 138 South Fifth Street, Philadelphia.]

1877

1[illegible] South Fifth Street, Philadelphia, 15 Jan. 1858.

My dear Fanny:

Your highly acceptable favor of [illegible] did not come to hand until Friday as it was mislaid until yesterday. I was surprised & astonished on reading it, but it was concluded that it was written [illegible] and been presented to some Sunday evening caller. — So that District ball — Head, and those girls really did get home some time that night. — The account of the reading club is quite interesting. I hope the reading of Julius Caesar will be more successful than mine here. The Belvidere Club is a capital institution and must succeed. Probably the number of members will be smaller than in the Shakespeare Club; and yet they must be on such terms with each other as to make it a nice cozy affair. The reading of Molière's plays will recall to Henry the fine acting of them that he used to see in the Théâtre Français, and that will be agreeable if we should sometimes be a contrast between the two. — You seem to have fairly bewildered whom the Miss [illegible] is to be married to, as far as interest in the matter is concerned. Folks will be sure to see you hunting up names. — How delighted I should be to run in upon you of an evening. How would certainly be one topic we would not fail to come down upon the gabbling and idleness for each succeeding. I might get into [illegible] the [illegible] but should not all like it so if we had a succession of [illegible] and then could not receive until late. We didn't after all have a great deal of stirring on the Fourth of July. Quantities of [illegible] in the field: but so little, alas! considering how long it was a [illegible] day. — I must have probably had a short time today or this evening, something to give George for a job of work ing; for it began snowing here this morning and has rained all the rest of the day as it did before when it came to stop. I am sorry he was [illegible] to [illegible] me out in that time. — The storm was not to prevented me from going to the Franklin Institute monthly meeting, nearby, this evening. Mr. Robert Briggs of Wilmington, Del. was a friend of Mr. Kelly's, and [illegible] offered a resolution in regard to the National Currency which [illegible] that was passed last summer [illegible]; but all things

meeting was a small one. There were not twenty members present. It was opposed merely as a matter of order in this society as it was to have been in the meeting of Thursday, and the meeting would have passed off as far as the discussion of its merits, except that Mr. [illegible] very positively and dogmatically made some assertions in regard to the law. He asserted in substance that it was perfectly clear that a man has a natural right to an idea either of an invention or of a writing, that he may keep it from the public, whereas the copyright of books and patent rights are merely privileges granted to authors and inventors for the purpose of encouraging their labors. It may be expedient to encourage these foreign inventors by such privileges, because they might otherwise keep valuable inventions secret from us. But there was no expediency on the whole in granting such privileges to foreigners, and [illegible] does not seem to me any reason for doing so. He also seemed to see no more propriety in giving such privileges to authors than to scientific men. Then there was a long discussion on the question of suffrage or the cities in which scientific men are not as much interested as in Cambridge.

17 Dec. 1868. After the foregoing most prodigious effort could I do better than write a brief postscript? This morning I have still further relieved my mind by a Note to the Morning Post, my favorite little newspaper, which had a short editorial on the incorrectly reported action of the Institute, taking side for international copyrighting as positively and unwaveringly as Mr. Briggs did. If my note should find room, which is hardly likely, as it is so opposed to the views of the paper, I will send you a copy. It has served at any rate to relieve my mind and do a little service in English composition, and may impress the editor privately. And there is a word or two to say on the other side too.

Your reading of Stillman's Italy will perhaps be a good preparation not only for living in his house but also for looking at Mrs. Ide's collection of Italian photographs. She has a great number of them, and it will take you a long time to look through them all. I wish you had been there to look over them with me the other day. They bought there a couple of pretty pieces of statuary, in one of which a certain likeness [illegible] was discovered by one of the Lords, and it is perceptible; it is a bust of Pharaoh's daughter. Another piece is the Lady of the Lake. There is a portrait too of Annie, which is a very pretty picture. I hope you will drop in and look at them when you have a visiting day; for [illegible] a visit there.

110

Not liking [illegible] I parted from you I fell in with the writer of that letter I read to you the other day. He latter took me to task for reading it to anybody but yourself and for not particularly pointing out as I had expressly requested, a hint in it that you might lend him into trouble before you knew it; but what would that be to you? I convinced him that I had done quite right under the circumstances, but he bored me a good deal. He is on the whole a most amusing character to me, to say the least, and I have a good deal to tell about him; but not to bore you, will give only one little joke. He said he had a great mind to write a play with the title: "Fan the Flame" (like Brougham's titles: "Playing with Fire" and: "Flies in the Web"), but told him to beware of both Fan and flame, and whatever he did himself, not to get me into it or walk along with him, if he could help it.

Give my love to Hannah and my thanks for her postscript to your letter to you. did not tell me the length of your writing periods for the next three months, I shall be left in suspense as to when until your answer comes, doubting whether it is delayed by the length of those periods or by the miscarriage of the in the mails. In the meantime, believe me ever

Your affectionate Cousin,

Benj: Smith Lyman.

P.S.—Evening.— I have been at the Lesleys' this evening. Mr. Lesley was reading aloud from Nicholas Nickleby, about the Crummles. They were all in the front room where Mary has been lying sick for some days. She is better now, and is expected to be up again tomorrow. Mary had just got a new-fangled doll's head that has brilliant blue eyes and shuts them when laid down. The effect is very comical; but it is produced very simply. The lids are painted on the eye ball above the eye itself, and a weight inside the head at the end of a short lever makes the eyeballs revolve when the head is laid flat, in such a way as to bring the eyelids, instead of the eyes, behind the eye-openings.— A Naturalist, by the way, was sent to you last Saturday. There are one or two things in it this time that I think will be [illegible] to you.

B.S.L.

To the Editor of the Morning Post.

Sir:

If you do not deem an apology necessary for troubling you with a few remarks on the subject of the Copyright question, which you will perhaps let the questioner himself try his hand at it. It may well be for several reasons very expedient to encourage foreign writers as well as native by offering them copyrights. It is the best writers or at least the most talked that profit most by a copyright, so that it may be looked upon as a reward of merit which generosity should give to foreigners and natives alike; for all good literature should be encouraged by everybody everywhere. This seems more easily and fairly done by the copyright, that is by a kind of tax upon the readers, than it could be done by royal gifts and pensions. An international copyright, while encouraging foreign writers, would also encourage native writers (aside from giving them privileges abroad) by raising the price here of foreign books of each class and so making the corresponding class of home books relatively cheaper and more sought after than now. Publishers of reprints would perhaps be benefitted also by copyright, for it would shut out competition; and of course an international copyright law could not apply to books already given to the world, but only to those written hereafter, so that present undertakings would be undisturbed. Although our present writers would probably have written one more nor better if they had had greater [illegible] yet greater rewards for writing might have drawn able men from other occupations into this (if that were one to be desired); and so have added to the world's best literature and perhaps raised the standard of good writing to the benefit of readers as well as writers. But there can be no doubt that the whole question is one of expediency and perhaps of [illegible]ority, but not at all of mere justice. What is often said of a "man's right to his ideas just as to any other property after they have been given unasked to the public, seems absurd; and calling readers and republishers of reprints thieves and pirates sounds like mere bosh. Whether the copyright question is a fit subject for the consideration of [illegible] societies not devoted to political economy or social science is at least questionable.

2.

[This part of this is at your service for publication; but you would oblige by not mentioning it.
If you should choose to print it, I respectfully beg I may be known. Benj. Moore Lyman. 135 25th St. Philada.]

135 South Fifth Street, Philadelphia, 23 Dec. 1868.

My dear Lanborn:

A copy of the Semi Weekly Republican for the fourteenth of last month came to hand the other day and I return herewith ten cents for conscience money & the name of the Republican besides my thanks for your trouble. It proved however to be the wrong paper to complete my set and to give me Lowell's essay on Emerson for that was wanted with the weekly paper of Saturday the twenty first of [illegible], but very likely no spare copies of that were then had any longer; and I feel just as much obliged to you as if there had been.

I sent you the other day a little effusion of mine in the morning Post here, on International Copyrighting; and send you today the afternoon Press of the same, also by myself. Resolutions in favor of international Copyrights were also brought up at Chicago at the Scientific meeting last summer, and I took pains that they should not pass unnoticed as after resolutions were doing at that time, and voted against it almost, I should say, by the loud distinctly; but there was no discussion of the matter before the vote. Some resolutions are talked about right at the time & then as much as forgotten, even after publication, and so on.

I trust you will not imagine that my views on the Copyright are influenced by selfish considerations, when I state that I am writing a book that will no doubt be the best of its subject of any in the English language. It is a treatise on Surveying in all its branches, land, railroad, Canal, water, mine, geological & government surveying, and is going to be just about the completest thing in the world. The writer of the best American book on surveying is dead, and so he can't interfere with mine. His book only treats of land surveying; and mine is for one half this even if that should. It is a big job, but it is undermy self although it may be interrupted by work that will pay more readily, yet I shall get through with it in the course of [illegible].

Wishing you all a Merry Christmas and a Happy New Year, I am as ever

Your most grateful & affectionate friend.

Benj. Smith Lyman.

If with the Republican President a post do. or neighbor give me a [illegible] time, when I inquire after me

[illegible]

135 South Fifth Street, Philadelphia, 24 Dec. 1868.

Dear Mary:

Your letter of yesterday is at hand this afternoon. Your account of Kit's visiting Clubs is interesting, and I am glad to hear that Julius Caesar turned off so well, and especially that Henry Hinsdale proves to be so good a worker. I should like to have seen in Making, my two new Hannah and Fanny's carpet-work and afterwards. The Historical Club must prove to be a still more entertaining one, and what you say of Miss de Gottal does not surprise me, for if she had been very well educated except in music and some such accomplishments she would be a rare bird among Frenchwomen; but, as you say, she may talk French very correctly, and if it is something at any rate to learn to read it when she is talking at ordinary speed. I think I see the Unitarian church lighted up to-night this afternoon; I see a fresh storm with rain is making a revision in the middle of the day; all that will come through the blinds. I suppose my Sunday lecture is rather [illegible] although it is Christmas Day, I guess I can just whisper one [illegible]; something is old when. Sabin's head used to be at Cambridge.

I send you with this a couple of little pieces that I wrote for the Morning Post-News, begun here, together with the little editorial on International Copyright that called them forth. For my solitary vote on that subject last summer at Chicago may have raised some curiosity in you and Fanny as to my views on that matter. It seems to me that there is a great deal of nonsense uttered on the thing, and it was a little relief to me to have my say; I feel now as if I should not burst the boiler from that cause. — I expect soon to have a personal interest in international copyright, for you must know I am writing a book that is to be the standard work on its subject in America if not in the British Empire! At any rate I have a good deal of confidence that I can make a better book than the one that now is the best American (if not English) book on the subject. The book is on Surveying in all its branches, land and water, railroad, canal and mine, geological and geodesical. The [illegible]

[illegible] and surveying, and I have
[illegible] Stanley Hawkes are so closely
[illegible] in my book. In this I
[illegible] improve my work. My
[illegible] highly, and the Furniture Co.
[illegible] it might be a very good
[illegible] arrangement. They are now
[illegible] in preparation for issuing
[illegible] serves as a rough sketch of the
[illegible] big undertaking, and will take a
[illegible] supplied by more that will pay
[illegible] a very interesting and absorbing piece of work, and when it is
[illegible] done will advertise me well, and I trust bring me in some money
[illegible] as well as indirectly. On this score I feel more confident
[illegible] than in writing; but the demand for any thing good books
[illegible] on this subject and the great number of surveyors of all kinds
[illegible] and the clear way in which my subject is treated in such new Countries as
[illegible] here, I sometimes believe that a good book will sell. My copy
[illegible] of Hilgard is of the eighth edition and was published only eight years
[illegible] after the 1st edition. I have had some experience in surveying
[illegible] and write in a way to, such as few geologists pay much attention
[illegible] to surveys. There are few who could put the geological part into
[illegible] this book, and this very important; and how few are there capable
[illegible] even of so illustrating or dividing as to write the book, so I expect
[illegible] a competition on the part of some new writer.

[illegible] Kate, and my wife seem determined to have pity in any kindly
[illegible] that I could make suitable arrangements for my dining with them
[illegible] tomorrow, and dispensing the pie & cake. I dont feel lonely, however,
[illegible] and have not lately had Thanksgiving that I should not feel uncomfortable
[illegible] at being alone on Christmas. — Aunt Susan and my family
[illegible] here were all [illegible] with colds,
[illegible] Mary last and worst. — Miss Kate Howard is to spend two weeks here,
[illegible] a guest of Mrs. [illegible] Early from this office, [illegible] Woodward, beginning today.
— I saw the Hoppus last Sunday evening, the first time since coming home.
Miss Mamie, it seems, has gone suddenly to England with some of the family
and will be gone more than three weeks. — The Miss Lyonnais were to start
yesterday for Texas to spend the Holidays; but have probably not traveled that
they will not [illegible]

Give my love to all.

With affectionate regards
Yours truly
[illegible]

A Merry Christmas to you all.

135 South Fifth Street, Philadelphia; 27 Dec. 1868.

Dear [illegible]:

Your welcome letter of Christmas day is today at hand. If you will not take any peremptory offence at my [illegible] I will [illegible] to be frank. Will it be permitted to bring to your notice a new [illegible] recently coined, [illegible] for "ill, frosted, freeze and many other and for better [illegible] "prepaid" with envelopes "prepaid". Your welcome [illegible] to me and [illegible] for [illegible] [illegible] [illegible]

Last evening Mr. Mitchell & Miss Kate Hamil, [illegible]
[illegible] I [illegible] spare an half an hour
the second we will not count upon pleasure to be
had in [illegible]. She was as lively and agreeable
as ever — I have not been much visiting since Thanksgiving.
I went to the Opera evening to see the Huguenots; it seems
Mr. Mitchell intended to return very soon to England and
quite suddenly and not to pay his visit here. I [illegible]
would not to go to Cuba in the [illegible] and then
[illegible] and [illegible] very pleasant with
[illegible] [illegible] [illegible] [illegible] going
[illegible] [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible]

135 South Fifth Street, Philadelphia, 27 Dec. 1858.

Warren Delano Esq.

No. 55 Broadway, New York.

My dear Sir:

At the earliest opportunity, within a day or two after
arriving here, I called at Joseph Sealy's Counting room
upon Mr. Wesley in the 5th st, and he said in the
presence of Mr. Taylor, upon the Company and Mr
Sealy's behalf, that they [illegible] the
[illegible] and [illegible] to do so, owing credit to Mr. Scott
[illegible] and [illegible] and [illegible] the Board not
[illegible] As soon as there is anything definite to
[illegible]

[illegible] and Mr. Wesley and Mr. Wilson, and
[illegible] Mr. Taylor and Mr. Sealy all. I am sorry
[illegible]

Affectionately yours.

Wm. Smith Lyman.

1 1/2

13 South Fifth Street, Philadelphia 31 Dec. 63.

Dear Father.

None of my schemes for making money seem to have come to a head yet; so I am brought down to writing you again for the same more money. I much prefer taking it in the former case in small sums of I could take it from you and keep taking it [illegible] and then might never ask you for it again; but if you have to borrow the money yourself & incur the [illegible] of it, you feel the other question. If you could send me a hundred and fifty dollars this time, you would [illegible] my mind; but a hundred would help me, may be, a little.

I am glad to tell you for the sake of the children that Kate is still well. Lizzie is still not quite well and was confined last evening; was [illegible] and is getting better and [illegible] Christmas day in bed. Kate [illegible] and Willie [illegible] have been well, he remembers well the [illegible]. Jennie Winter, made him a call yesterday. Dr. [illegible] is [illegible] [illegible]. Write when you can. Love to all.

Your affectionate son.

[illegible]

135 South Fifth Street, Philadelphia, 2 Jan. 1860.

Dear Father:

Your letter of the 28th ult. was received yesterday. I am glad to hear that Mamma is well, and that you are getting along so prosperously. I wish, however, that your fears were mine in regard to the effect which the cold weather or by any other cause, would have upon the health of my wife. I have been married now for three months, and my appetite began to improve until I had my wife to begin to have some trouble with her health, and my appetite began to improve until I had my hunger began to be great, it seems to appear that the health of my family is the whole object of my life. I am glad you say that I have in former times got along pretty well with far less food than I have at present, and that I found no difficulty in procuring when the amount offered was too little in amount, or too little in nourishing power, or too unsatisfactory in performance. The effect in this case was manifest within a week or two after the change, for there is no likelihood that I am doing myself harm without having it by which that we cannot distinguish for many years to come. The food we need depends upon the nature we have and our physical system constitution, or capacity for digesting well. My opinion is that the degree to which hospitality is usually exercised is often oppressive to many people, and that we need to eat much more than would naturally be required to

Dear Father:

Your favor of the first although unfranked
came duly to hand for which
and was well received with the last

[illegible]
[illegible]

I believe myself commencing my work in the highland circuit
this evening and perhaps some other papers, and I intend to visit
Hamilton first if I could do no more, and I would advise
Cattin the same. Oh. If ever any of it would look to that
district can only be done from Hamilton; since it is there, whether
Cattin or Cattin, for the number of men who may be employed
be as well supplied as may, for it is not very large, and the
number of the ships are at Hamilton for it is still smaller, and so
are the soldiers. I am very busy for we have work
with the coming of spring mine will very soon arrive in
Hamilton I am already [illegible] to the [illegible]
with the [illegible] [illegible] [illegible] by the
in the by anybody else. The commencement finds some
others will be on the work and for the work, and perhaps
sending [illegible] and [illegible] for others as soon as if ever we

M. Felix Rocca
grand H. Hotel, Paris.

Dear Sir

Your very welcome favor of the twelfth
came duly to hand; and I am delighted to learn by it that
you are to be here again as soon as
convenient from this time after your passage is taken
that time you are coming in and when, so that I may
with certainty fix the time in which all my engagements
can be completed, will you please to name this to me
as soon as possible, as I would wish to arrange my affairs
accordingly, but there
are many things to be attended to, before I can
finally leave.

I shall have to see you again about the
claims of different parts of the United States. We agreed
upon a certain point to meet agreeable to Exchange Alley
Lombard Street, and I hope there may be able to be there
on the

Dear Father:

Your favor of the fourth (yesterday) I received this morning and I am glad to hear you are all well. I am very much pleased with the picture. I have been in the library almost all of the time since I received your letter. I have not had much time for anything else. I have been very busy for several days with my work. I have been in the library almost all of the time since I received your letter. I have been very busy. The weather is very cold here; and I think we have had two or three days more cold weather than you have had. We have had very cold winter weather. It was called the coldest December day in fifty years. I was out of coal and had to go to the office to get some coal. I will write you if we find it necessary to have it sent down.

Edward Howe is still here, and he has not found any situation for work, and he is going to Cambridge for the winter. The girls and children have been quite well, but the weather has been very cold. Perhaps if you would write to them they would write to you. Perhaps if you would write to them they would write to you. Perhaps if you would write to them they would write to you.

Love to all. Your affectionate son, [illegible]

[illegible]

[illegible]

[illegible] I could [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible]

135 South Fifth Street, Philadelphia, [illegible]

Hon. [illegible]

Sydney, Cape Breton.

Dear Sir:-

[illegible] is at hand. I again have a friend who wishes to advance the money necessary for survey and with pleasure on my advice, he has made a business arrangement directly with me for that advice, instead of getting it from me through you. He wishes to avoid [illegible] any influence you may have with the government [illegible] for that purpose an interest in the [illegible].

You seem to feel that you have never had the full [illegible] with Mr. Ward and Sydney road survey; between myself [illegible] the important [illegible] had upon. [illegible] they also enabled me to give you [illegible] in regard the value of coal claims [illegible] you. I think you told them that you had with [illegible] survey extended as far as it went, with [illegible] followed in the printed maps and [illegible]. I [illegible] willing to make an map survey [illegible] as far as surveyed; he would not [illegible] the needful for [illegible] expenses for that.

[illegible] truly.

Benj. [illegible] Lyman

Dear Edmund:

[illegible]

[illegible]

1857 Mt. Pleasant Street, Philadelphia, [illegible]

[illegible] R. Howe Esq.

Denver, C.

Dear Edward,

[illegible] the evening, and so it would be a good plan for [illegible] to take his inquiries [illegible]. We say we do not think it would conflict at all with his project, and yet he would like to see the book [illegible] and to have a copy of it; and he thinks there would be many ways in which it would aid. His own book covers other ground, is on a different plan, is more thoroughly practical, and deals but little in formulæ and especially avoids the use of algebraic symbols; and it will be in two volumes of five or six hundred pages each. We think it would meet the wants of another class of men from that to which his book would, a more ignorant and more exclusively practical class; and the weight of his authority would give value to a translation of it.

I send you herewith a copy of some extracts from Mr. Lesley's coal manual giving the [illegible] by the coal measures in your neighborhood. I would suggest that you should have a map made to show this section; on a scale say [illegible] to the foot, and afterwards on a reduced scale, perhaps. It will be good exercise for you and be useful too for reference when making your examination. I would also recommend that you buy a good [illegible] and [illegible] paying work with making complete working drawings of all the mining apparatus and machinery, pro and con, in your neighborhood. It will enable you to answer prompt questions you may be called on for or any such work; of course for this plan [illegible] you can make it [illegible] more or less expensive and [illegible] you not only [illegible] you can have your translation [illegible] and [illegible] do the work. There is no need [illegible]

135 South 15th Street, Philadelphia, 5 Jan '87.

[illegible] Love;

Your very welcome favor reached me before [illegible] and I have also to thank you very [illegible] which arrived a few days ago. I [illegible] that your [illegible] and no other reason [illegible] and my dear you will just in love as ever with the [illegible] and sending Dinah Jean and the Pope [illegible] Christmas day, and retired [illegible] and [illegible] pinnet, and just in the [illegible] and [illegible] [illegible] you just in after that [illegible] I will to explain Mary's Reward now you fell, and [illegible] it round [illegible] [illegible] all [illegible] the matter. You guessed omitted [illegible] "Did he hit the owl?" - Miss Howard [illegible] we would come not within eight or ten days I have [illegible] three times without finding [illegible] owl; [illegible] was out and once sick abed with a headache. Mr Jean [illegible] the old [illegible] her again before [illegible], which seemingly [illegible] within a very few days now.

I went last evening to see Mrs. Palmer, who lives with her daughter Wright and has been a [illegible] of [illegible] taken to [illegible] an elder sister [illegible] in her seventy third year of life. She is a most [illegible] woman, and I take great delight in my calls upon her from time to time. She always has a good [illegible] of general matters to present in a most agreeable manner. She is so lively and in her feelings so youthful and in her views so [illegible] that she seems always at least [illegible] years younger than she is. Last evening Mr. Wallace Wright had to go to a party near and left me a little while before she. Palmer came in from [illegible] Old baby to bed [illegible] and from dressing for the party. She [illegible] for me [illegible] and sent me word to wait for her to [illegible]. I [illegible] a little [illegible] for [illegible] to the party. I had to stay [illegible] for minutes [illegible] after she came down; but in even less [illegible] minutes she was [illegible] a very [illegible] appearance [illegible] Abbott Howell in [illegible] house I did [illegible] Mr. Howell is [illegible] winter. Mrs. Howell is away in Europe perhaps, and [illegible] left by a maiden lady and her brother-in-law [illegible]

[illegible] Brighton, and the Lesleys lived with them and as the house is small, have the best part of it to themselves, and [illegible] The house is a third story and above Spruce. Mrs. Palmer looked as if she knew the place and Mrs. Howell. "Oh, yes!" she said "she had known her ever since Mrs. Howell was born." Mrs. Howell you must know is Rebecca Harding Davis. Milton's blindness [illegible] was often seen ascribed to him, "Begins "I am old and blind". Mrs. Palmer said Katherine Lee Bates Whittier lived near as editor of the Antislavery Standard or what the Anti Slavery paper was called then, Mrs. Howell [illegible] was in love with him and he seemed to be "with her, but she never could be in love with one woman more than a few months and so he disappointed her. After that she married Mr. Howell, a widower, and she died very soon of small pox. Then Lee writes that herself as if she never [illegible] and kept herself shut up for years in Rathbone Place and even in Gower Street and notes and mentor visits were being written a square in her street. The after picture was also very bright, and ended with a man she had married California. The sisters and mother were Isaac and Edgar Lloyd and were first cousins. Mrs. Palmer mentioned the hatching and [illegible] because she as a Quaker is opposed to the [illegible] of women. [illegible] the willingness of the children [illegible] against her, [illegible] arguments against freedom. The children of the [illegible] were very bright and the girls were not [illegible] common women, but the five sons were [illegible] remarkable, strong [illegible] so far as the kind [illegible] with particulars [illegible] them [illegible] many children I remarked there were few quite as small [illegible] of character. Still [illegible] stained glass windows [illegible] the back room of the house [illegible] are lovely in, that [illegible] and a very pleasant view; and that seemed to be one of the Howells [illegible] part of the [illegible] sitting room [illegible] from the world. [illegible] also to have been a little envious [illegible] Mrs. Palmer thought [illegible] fifty-six years. [illegible] I might ponder as not to have written down more matters that [illegible] and [illegible] but [illegible]

I have lately got a copy of Lecky's Historical Sketches and find it a valuable treasure. That treats [illegible] all subjects. It is a pity that the [illegible] of former [illegible] should have held back so many people from reading things as for Spekter and Spectator with equal preliminary [illegible] in a few cases of various spelling [illegible] the book [illegible] grade above prominent. There also a full list of variously pronounced words with [illegible] the right. The [illegible] much better [illegible] [illegible] [illegible]

1

135 South Eighth Street, Philadelphia, [illegible]
1889.

Edward E. Hale.

Feb 19.

Dear Edward:

Many welcome letters of the first came to hand yesterday night and I am delighted to learn that you [illegible] Treasury visit. I have been at some loss to make out from your letter in what bearing of my recommending you to make a visit of inspection. It would doubtless be a very good thing for you to do at some time in the future but you have no [illegible] to do it for the particular work. It must be at your own discretion & by my recommendation to you & not at the urging of the section I hold for you entire liberty. 2. I gave both the trap & both to Prof. Jay you will see. Of course the typical section of the rock [illegible] varies [illegible] & [illegible] yesterday [illegible] Barrandshnitt, and [illegible] & the thickness of the different beds which is given. I only [illegible] to make a drawing in which the [illegible] should be made, so as to have at a glance a section of the whole series of beds & each other. Here is the rough [illegible] of such a section; only a very few beds have been marked off from it you have read any book on geology. — I hope you will get the plan of [illegible] & that will [illegible] very promising. — Capt. Comly has promised me for Monday, and I am pleased with [illegible] getting [illegible] opinion. I do not think it would be worth while for you to [illegible] & Carlsbad about it, for would rather avoid writing [illegible] now is all under way. — Mr. Borden sent me last Thursday the following letter he had just got from Mr. Seymour of Huntsville.

"Bottom, Jan. 11th 1889. E. Borden Esq. Dear Sir: Your letter having been sent here [illegible] I was on my way to Tennessee [illegible] receiving it until [illegible]. I have been thinking the matter over and I do not see any chance of employment for any more hands than I have at present. Engineering work is now so slack that I have found it necessary to discharge one of my hands. The surveys at Tamaqua are now completed, except the [illegible], which we think advisable to leave until

I

the weather improves. I would like to get the names of the birds mentioned and the Lake you were boating on, and if I succeed I shall be able to point a specimen out to your friend and will give it with pleasure. Yesterday afternoon I, B. E. Symons, — Dear Mr. Eckley Saturday morning and I did not like Symons had returned and with certainty of the daylight that every gentleman Englishman would be an Oxford or Cambridge and he did not explain to his countrymen that in a very humble position at first I should [illegible] specimens. Being in the Parliament with such a body, and one would rather not have Parliament [illegible] now an uncertain [illegible] for a Parliament. But I am glad at your prospects there, if I should interpret aright with the respect. If the affair of [illegible] should come to anything I will postpone. It certainly seems that Oxford and Cambridge are [illegible] than they would be [illegible] at this place. Besides you will find the climate more agreeable at Paris than at Oxford, and perhaps the surrounding [illegible].

I am very much obliged by your sending your catalogue of [illegible] books and for your offering to lend them. I may like sometime [illegible] Lucretius to see a book of your own Oxford and Bergen, but it is not worth while to have them sent here on purpose. I may be in Cambridge some time and can perhaps then. If there is anything in Cambridge about Lucretius I shall want to look at that too, and I may probably find it in some library here.

Eckley Coxe recommends, if you should not be [illegible] Putnam should have inserted [illegible] and that you can cut the tables [illegible] tables that would be [illegible] and paste them in your manuscript, but I would [illegible] enough of this to [illegible] you are making the final copy of your manuscript. I could save you much trouble in [illegible] technical words for you, as would save [illegible] and [illegible] you might make out a list of such words as you cannot find in the dictionaries, including the "Technological Dictionaries" — spoken of as forthcoming by Lea & Blanchard and I could show it to him and get him perhaps to [illegible] the publishing them with the American [illegible].

Smith Freeman is well as the rest at Chicago last Sunday and there [illegible] the young fellow [illegible] is now a geologist and perhaps even [illegible] by this time. I had supposed he had left Parkman for Illinois long.

With best wishes Yours very truly, Benj. Smith Lyman.

35 South Fifth Street, Philadelphia, 18 Jan. 1867

R. H. Allen,

89 Water Street, Portland.

My dear Richard:

Your kind favor of two days before yesterday is at hand enclosing the promissory notes. I will put them in the safe this evening where they will remain, until Mr. Mabon's letter comes in the next mail. I am afraid he and I shall never come to a satisfactory terms with each other. I have no capital to invest as he proposes, and if I had would not do it, nor can I advise any friend of mine to do it for me. If he would furnish the capital himself and offer me a salary of a hundred thousand dollars a year, I should hesitate long before engaging to spend ten years in the Indian Ocean. The ship hires and buys would scarcely be equal to ship hire and buys in Massachusetts or sixteen thousand miles. One whole year is much more than I would care to spend in [illegible]; but I would like very well to make a short trip: perhaps for a few months, perhaps another year; and for a short trip I should be satisfied with the terms I proposed. However, we will await for his letter.

You are quite cool to talk of not my going on to spend a Sunday with you when is your promise to spend one here some time in the winter? answer me at once will yes! It be one I would be handy for me to have you to come at here as per boat. Address me at once, and if it should prove desirable for us to talk the matter over, and I will promise to do [illegible] in the visiting way in return. It will give me great pleasure to accept my invitation.

Yours very truly,

Benj. Smith Lyman.

[illegible] Sept [illegible]

Dear Mary:

[illegible] Sunday came & found us [illegible]
[illegible]. Standish were [illegible] Mary & they would [illegible]
[illegible] me to do, and I was [illegible] you [illegible]
you were mistaken in it. I should have come myself in spite of [illegible]
[illegible] but I was [illegible] for a long [illegible]. Why [illegible]
[illegible] — I am glad to [illegible] [illegible]
[illegible] Kate [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible] [illegible]
[illegible]

have confidence in them. But I think he might to look to would have a good influence upon the education and character of women; for if he is deficient in them it seems to be wholly from education. Raised with more general education the characters of the two sexes would be different, if on the whole equally pure. But it is now the education of women which degrades them and it seems true we have not the strong distinctive lines in character of the two sexes. What the laws would be established, influenced or not by the voting of women, or the management of state affairs be helped or not except from the indirect benefits of the improved character of one half of the people, is not so clear and is not of so much importance it seems to me. So much for my views on these matters that you asked for.

Edward Rowe left here a week ago last Thursday for Pomeroy, Ohio; rather suddenly at last, and by my advice. I had a letter from him last Saturday saying that he had a good prospect of finding employment there and was pleased with the place. He has very influential relatives and friends there, the two Mr Stem were first settlers of Pomeroy. Pomeroy has coal mines extensively and iron rolling mills and they are largely interested in them. It is also not far from the Coal oil & Salt regions and from Parkersburg where many of this and Kentucky cities get their salt. It is a good centre for him to settle at, and I have had more visits in Hartford concerning engineers, in fact more than I believe in respect to the actual working of mines, than for some two years since. He was here a week in my room, and I obtained a position with Sam Hartford he had before. Indeed, I had already seen him about, and had only a few days from him. Perhaps you got a letter given me too high an opinion of him for I certainly do think of him as a good and understanding fellow that will stick to you all he can. But that he is a good natured & good company fellow is not quite so apt as I had expected. — Last Friday night Mr. Lesley & his lady were elected a member of the American Philosophical Society, a society that I think [illegible] to be a very [illegible] society. It has long been living on its old reputation, but is dying [illegible] now. Mr. Lesley looked in good health & spirits. He is going in Pennsylvania [illegible] this week and next before the Legislature. Mr. Lesley is [illegible] and [illegible] Saturday. He is writing here on the catalogue, and is very anxious [illegible] with the publication.

Remember me to Mrs. Brooks, Mrs. Boyd, and Mrs. Lyman.

135 East Fifty-Third Street, New York, 21 Jan. 1

[illegible]

[illegible]

My dear Friends.

[illegible] yesterday, came & went yesterday. I have been [illegible] of the [illegible] of the [illegible] & [illegible] [illegible] I received [illegible] a little [illegible] [illegible] [illegible]

15 South Fifth Street Philadelphia, Oct 5th

Messrs. Winslow & Co.

Nos 109 Water Street N. York.

Gentlemen:

Yours of the 1st at hand this morning and that Messrs. Morgan and Orr / No. 12 & 14 Carpenter Street Philadelphia / had made mint machinery for Peru and other South American States, and were desirous to do that kind of work. These Manufacturers have on their sign: Iron Founders and Steam Engine Builders, and therefore be an old established concern, and will have reason to sign the Document that was received a dozen years ago dated.

Should happy to have been able to get out anything in the machine line, and would be happy to do anything further that might arise and remain

Very truly yours.

Benj. Smith Lyman.

15 South Fifth Street Philadelphia, [illegible]

Allen [illegible] Esq.

No 15 Broadway, N. York.

My dear [illegible]:

Joseph Leiby this morning suggested to me [illegible] Hall about the proposed railroad to Cumberland or [illegible] Gorge; and that he said the Pennsylvania [illegible] would do as in other such cases: if your company [illegible] road entire to the State line and grade it for [illegible] the Penna R. R. will lay the track from the [illegible] and run it. Mr Joseph suggested that [illegible] you should have an interview with Mr Cumberland; probably Mr Hall has no [illegible] and a deed) for such an [illegible] and I think if possible you might make a more favorable arrangement than the one now offered, although it gives no doubt a handsome.

Hoping then to have the pleasure of seeing you here before long, on your return of having become the owner of Lemoin

Affectionately yours.

Benj. Smith Lyman.

135 South Eight Street, Philadelphia, 24 Jan. 1869.

My dear Fanny:

Your letter came yesterday afternoon & I was a little sorry to read it, for I could not help thinking that you were not well, & that you were out of the habit of correspondence; & all this being ill and not feeling well, & Lily, I don't know. You are a naughty girl not to have written me a good long letter. I have not received the promised letter from Lily, & I am greatly disappointed. But instead of writing that letter you said you were going to write, you have written me a little note, which I am very glad to get, & which I am very glad to answer. I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that Mr. Stone has gone to Cincinnati & will not be back again for a week, & I am sorry that Mr. Lily has been ill, & I hope that he will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon.

I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon.

I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon. I am sorry that you have been ill, & I hope that you will be well again very soon.

made here in favour of Mr. Aubrey Smith about Freemantle
[illegible]. At the Meeting with Lesley I had quite an interesting talk with him and
did not find him at all different. When Mr Lesley & me I spoke
to Lesley privately, at first I was a little sick and I may [illegible]
[illegible]; but I could only say anything to the disadvantage
of Mr Aubrey Smith as we are [illegible] both little men. Mr.
Lesley got me elected a member of the Social Science Congress, my first
claim since he became a City Councillor, so that you may expect
success and I have no doubt [illegible] at least as much so as one
of the Hon. members for the City. Hope. I had no personal desire to be
a member of the Council for it is hard for some time past I was
in favour of [illegible] but Mr. Lesley evidently attaches some im-
portance to the matter, and the Society in general evidently consider
[illegible] have a better [illegible] than that a man is a member. Mr Lesley is very
[illegible] time [illegible] at the Theatre, and I may become one
[illegible] with them even it may be useful to have
[illegible] for Mr Brown will be [illegible] unwillingly [illegible] agreed
[illegible] and may [illegible] much higher opinion of him
[illegible] than [illegible] have entertained [illegible]. Mr
Widgett is Mr. Lesley's [illegible] and [illegible] who have for many
years past [illegible] managed the Society may be entrusted
[illegible] to manage more active and intelligent [illegible]
I shall [illegible] the Society although not so ready and convenient
as we could [illegible] before. Never to talk [illegible] with
[illegible] from the Mr Lesley [illegible] proposed me as
a member; and Mr. Brown shewed me his letter and spoke
nice [illegible] I wished; but I cared so little about it that I let the
matter drop. Mr Lesley proposed me now without consulting me.
— You are very lucky to have a chance to hear Mr Emerson's
readings; it must be a great treat, and I am very glad it is
[illegible] that you can [illegible] it. Perhaps you will have a chance to hear
his Sunday afternoon lecture before you leave Boston, one of the
courses that I attended. — You and Mary seem to have had some
[illegible] about the Woman suffrage petition. It seems
to me that [illegible] very well to sign the petition, but that you do not
[illegible] to [illegible] Lowell unless you dislike [illegible] carrying
the petition about to obtain signatures. This might well be disagree-
able, although [illegible] for very satisfactory reasons quite different from
timidity; [illegible] Lowell's with it. It is not pleasant to

[illegible] from any body whether expenditure [illegible] to [illegible] of especial, as long as you [illegible] [illegible] [illegible]

I think you will like living at Mrs. Howell's very much. Edward Howe
in a note said he understood that you were going to board at
Mr. Howells, and he [illegible] him information from Cambridge or Portland
Place. Edward arrived here New Years day and staid until
last Thursday, with me here in Stevens mo. Finally in letter from
here yesterday [illegible] and he has written since his arrival there
that he was in good prospect of finding satisfactory employ-
ment there, and dis[illegible]ed he would think. While he was here I
got much better acquainted with him than I had ever been before
in our two Winters first intercourse before; and looked upon him
with no little curiosity & kind of what had raised him so high
in the esteem of you girls. Although that curiosity was not altogether
satisfied, he seemed to be a good natured enough fellow. Miss
Kate Howard, though, thought him very much changed from what he
used to be. She has just spent three or four weeks here, and I have
seen her two or three times by dint of calling on her trip or
night time; for she was often out to tea with her relatives and
former pupils, and often was laid up with sick headaches.
I went to see Mrs. Palmer ten days ago, but she was visiting
at a party near by, and we had but a short talk together.
She inquired after you and Mary very particularly, as usual.
She asked after Stevens too, and on my telling her that they
were living in Mrs. Howell's house, she gave me quite an account of
Mrs. Howell whom she had known from back. Mrs. Howell you know
wrote a remarkable poem on Milton's blindness, a poem that has
often been attributed to him himself. It begins: "I am old and blind."
She had two sisters who were also very bright and another sister
who was more like ordinary women. Mrs. Palmer mentioned with
emphasis that Mrs. Howell was the daughter of two first cousins, Isaac
and Elizabeth Hazard. I also remarked that the unusual brilliancy of the
daughters [illegible] of the two other brightness went decidedly ago [illegible] Mrs.
Palmer's pet physiological notions, which I admitted. Besides said she
five boys were very satisfactory characters [illegible], although she
said nothing simply a deficiency of intelligence in them. Mrs. Howell
had been very much taken with John G. Whittier when he lived here some
three years ago, before her marriage; and he seemed taken with her, but
he never could be in love with two women at once for a few months
and so he ventured and left her. After that he married Mrs. Howell's [illegible]
[illegible]

135 South Fifth St. Philadelphia, Feb. 1869.

Dear Father:

If you could find it convenient now to send me another draft for a hundred dollars, it would oblige me very much.

Aleck from Utica has come daily since Friday; and his letter from Kansas, indeed, in it is very interesting indeed. — Mr. Warren Delano and Aunt Katy and Louise have arrived here this evening, and Mr. Delano with Aunt Katy will stay here at the Continental until Saturday, while Mr. Delano goes on to Washington and back again. — Mr. Lesley got home last Friday from his Lecturing trip to Cincinnati and Pittsburgh. He was very well satisfied with it, he had worked hard all the time. He was in good spirits and health when he left home, but seems now also to have taken a cold. The rest of the family is very well.

Your affectionate Son.

Edward Livingston.

128 South Fifth Street, Philadelphia, 4 Feb. 18[illegible].

Marshall Brennish Esq.
Sydney, C. B.

Dear Sir:

I find your favor of the fifteenth of last month still unanswered. I hear tell your friend has written for my advice about rights of French Rat. He will find it very worth his while to get it from me directly, if at all, indeed, strongly another. Please recommend him also in writing time not to take the trouble to retail to my face with seeming relief any absurd slanders about me that may be afloat; for this device as may lead me first to hesitate about answering him at all, and then by putting off a couple of days to forget all about it. You may assure him too, if you please, that I am not likely to ruin myself in trouble of studying up the matter of the last Lacas trouble and lawsuit on the chance of getting paid merely in case I can recover. [illegible] chew! — I cannot quite understand why I should give up my just claim upon the whole proceeds of the sale of any of your real estate, until an account is settled, in exchange for twenty five or thirty per cent. of the same; nor why I should agree that my bills may all be paid per geological work by a mere share in the result instead of by money.

Much pleased to hear from you that you now have health, energy and attendance, and hoping that you will keep on improving, I remain

Yours Truly.
Benj. Smith Lyman.

12 North Eighth Street, Philadelphia, March 18, [illegible]

Alexander Dennistoun Esq.
Baltimore, Md.

Dear Sir:

[illegible]

135 South Fifth Street, Philadelphia, 5th mo. 8, 1855

Messrs. Sellers & Co.

Coal Dealers, Willow St. above Broad.

Gentlemen:

Please send me Fourteen, as early in the day as you can, half a ton of Lorberry Coal, egg size, or coal as near like that, as you can!

It struck me that the last load was only three quarters as large as usual, and it has seemed to be about two thirds slate coal, the rest stone, leaving just about one half the full amount of coal. This is a big enough delinquency, but if you could conveniently send the coal and slate separate this time, I should have my share of the slate, & could then mix it with my self, and you would greatly oblige

Yours truly

Benj. Smith Lippincott.

1305 Arch St. Philadelphia, Feb. 86

Dear Ed.:

Your flower pot & fern left with its visitors safe & sound for a run in Dolans was duly received.

The Dolans left here for New York yesterday afternoon, Mr. Dolans going & [illegible] Mr. Savage yesterday morning and Louise Aunt Kate, staid at the Continental while he was gone and were frequently waited by the Lesleys and myself. The weather was bad most of the time, so they did not have a very good chance to see the city. Mr. Dolans travelled two nights in the cars between here and Mt. Savage; I suppose he is so poor he can't afford to be otherwise. He would seem to be as badly off as if he were worth one or four hundred thousand dollars. He and his wife earned well and Louise did so at times. But the bad lady had a nervous fever, and had while in several of her ill turns followed by headache and seemingly low spirits; she was, however, as well as usual.

I shall write very soon in answer to Mother's letter, but I want to keep Kate Smith's letter a day or two longer.

Give my love to all.

Your affectionate Bro.

Benj. Smith Lyman.

Dolans to go to East Friday night at the Lesleys American Hotel.

185 Sutton St Strand Philadelphia 15 Feb 65.

Charles V. Cadwalader Esqr

No. 8 Bromfield St.
Boston.

Dear Sir.

Inclosed please find a post office money order in your favor for four dollars and twenty five cents ($4.25) for the Commonwealth from the first of April, 1865, a year and half subscription.

Yours truly,

Geo. Smith Lyman.

1338 South 8th St. Philadelphia, Pa. 19

Dear Editor of the American Weekly

Gentlemen:

Enclosed please find a money order from me in favor of the American Weekly for ____ dollars and fifty cents for one year's subscription from the first of May next, and Oblige

Yours truly

Henry Smith Lippincott.

135 South Fifth Street, [illegible]

Prof. A. H. Worthen

State Geologist [illegible]

Dear Sir:

I thank you very much for the third volume of the Reports of the Geological Survey of Illinois received yesterday. It is a very handsome work [illegible] credit both to the State and to the head of the survey.

I have found time yet only to read the first chapter, but have found that very interesting. [illegible] of the Kentucky Coal Valley, the section and of the Illinois one as given in the first volume, from which it is right, is interesting and makes matters much clearer.

I had last the guest to look at a small tract of coal land in Henry County, Illinois, near Rock Island, the N. W. Quarter [illegible] 28 Town ship 17 North, Range 2 East. There was a coal bed well found at the bottom of mud shales close to the [illegible] line of the tract and very near the north west corner of it, [illegible] from the Southern edge of Section 21, as the land boundaries indicate. [illegible] was another poor coal opening nearly half a mile further east [illegible] within the western edge of the tract in question and at the [illegible] Creek. The coal at the Diamond mines answers well in thickness, two feet and a half, [illegible] floor (three feet or so of fireclay, below which nothing is uncovered) and quality to the description of Coal Bed No. 1; and the thin coal, only a mile to the eastward answers equally well in its [illegible] only with nine inches), and in its distance above the [illegible] if uniform all the way between them, might make the distance rather more than you give it) to represent Coal Bed No. 2. I had taken them for No. 1 B and No. 1 C of your first volume; partly because the upper one seemed to be the coal mined at Reynolds Mine, two or three miles to the northwest, and that is said to have eight feet or more of bastard limestone above it and a dozen feet or more of fireclay under it, and the three feet eight inches thick, and is of better quality than the coal of the Diamond Mines. But coal No. 3 may be small or wanting there.

I remain with many thanks

Very respectfully yours

[illegible]

35 South 7th Street, Philadelphia, Feb. 10.

Leo Lesquereux.

My dear Sir:

The third volume of the Illinois State Geological Report - Coal - has been received, and as I know that I am greatly indebted again for it although it with the regards of Prof. Worthen's written in it, I must thank you for it &c. It is a very handsome volume, but I am sorry to find nothing in it by you; although I presume the conclusions of the first Chapter are no doubt in exact agreement with your views. The correction of the New Facility and the Lower Illinois Coal measure section seems very satisfactory and makes matters much clearer. I notice in the descriptions of coal beds No. 1 and No. 2 (Kitty coal) the Coals No. 1 B and No. K of the tract I visited in Eastern Kentucky in Henry County. The two coals referred there answer very well indeed to the descriptions; the only possible difficulty is that the latter are reported to be thicker as a coal mined, for some miles from the river, and that was said to have eight feet or more of good bituminous coal above it, as well as a dozen feet or more of fire clay under it. But perhaps Coal bed No. 3 is not referred to in that region. I noticed.

The Cabys are pretty well, I suppose, after having had one of their attacks of diphtheritic fever, which fairly [illegible] Lily found [illegible] very ill indeed with pneumonia, and has been so now for a week or two. - My relatives at Northampton seem to be well.

Hoping that you and your wife are both well and that you enjoy the mildness of this Winter, I remain ever

Very affectionately yours.

Benj. Smith Lyman.

135 South Fifth Street, Philadelphia, 12 Feb. 1859.

Dear Sir:

I have read it [illegible] of your [illegible], and it has
won from them extremely [illegible] at its [illegible]
by a moment's [illegible] examination of its [illegible] as a whole
by any body. It [illegible] remarkably fine [illegible] of character,
[illegible] and [illegible] throughout, with [illegible],
[illegible] and unpretending simplicity of style [illegible]
[illegible] as to make it seem in parts like some paper by Soldiers
in the Spectator. Such correspondence is worth cultivating indeed.
She seems to be carried away by her personal feelings in regard
to Mr. Keep and to [illegible] the publishing point in this case, but
it is frankly and quite unreservedly done. For if men are apt to
be [illegible] by their feelings, women are perhaps
[illegible] sometimes to be carried to far by them. [illegible]
[illegible] would be all right again if the case reminded
[illegible] of [illegible]
She seems as if a woman of her ability would do finely for
[illegible] to keep to take the whole responsibility of
keeping a house, hiring and discharging servants, making
[illegible] of economy and the like.

I read the letter among others to Miss Palmer, and she was much pleased with it. I passed a very pleasant evening with her last Tuesday, when alone, because [illegible] had gone out [illegible], and [illegible]

over to [illegible] and did not feel quite well — [illegible] Before we [illegible] to New York to [illegible] [illegible] for some weeks, so I wished we just [illegible] Jenny surprised them from her visit [illegible] [illegible] [illegible]

135 South Eighth Street, Philadelphia
12 Feb. 1887.

Mrs. Caroline E. White
412 Spruce Street

Dear Madam:

In saying last evening that I would [illegible] the Lemmon Club [illegible] Friday, I forgot an engagement for [illegible], that will prevent my doing so.

With great regret that I [illegible]

[illegible]

P. S. "It" occurs in Leviticus XXV:5. Also in Psalms, [illegible] in Hebrews for Heaven, Heaven, grant us thy peace, and not the King of Kings; and three times within seven lines in the Winter's Tale, Act I, Scene 2.

B. S. L.

No. [illegible] South Fifth Street, Philadelphia, [illegible] 1870.

[illegible] Esq.,

My Dear Sir:

The first volume of the [illegible] Geological Survey of Illinois, [illegible] published. It contains some corrections of the Coal measures and section of Kentucky [illegible] published in the former volumes of the Illinois Report, and gives a few new numbers of Coal beds and a section [illegible] am quite satisfied that the two Coal beds [illegible] Henry County [illegible] Sec. 28, T. [illegible] the Nos. 1 and 2 of this Report, the one at Mr. Diamond's mine at [illegible], and the one at Mr. Gillespie's [illegible] instead of No. 3 and No. 4. The second and third [illegible] the subsequent sections in the first volume [illegible] of practical importance, however as the [illegible] may be of very great value in [illegible] would not like to have it expected [illegible] and then [illegible] impression [illegible] of finding No. 3 in this region [illegible] among [illegible] to include it. As this [illegible] volume [illegible] full information [illegible] with [illegible] in full. [illegible] of the beds no. 1 and no. 2.

Of No. 1 [illegible] and No. 2 in Illinois section, in the Snyder Coal in Scott County, [illegible] opened at many points in that and the adjoining [illegible] on the Illinois river. One [illegible] in Scott County, near Winchester, and the [illegible] eight miles from Winchester on the [illegible] Landing, on the [illegible] of superficial material [illegible] cover [illegible] of the Streams. It is seen [illegible] the east [illegible] and in the vicinity [illegible] dipping [illegible] Hillsdale [illegible] and [illegible] and near Hillsdale [illegible] Mr. Carroll's [illegible] through the shaft and [illegible] the Coal. At Hillsdale [illegible] and nearly the same was opened by a shaft and was found [illegible] feet [illegible] the Coal. In Scott County [illegible] in one of the shafts [illegible] and was opened by drifting [illegible] Mr. Gillespie's place. It is usually overlaid by a [illegible] slate, which forms an excellent [illegible] and the adjoining [illegible] this Coal is usually [illegible]

finishing up with three feet of impure fire clay, might be a very good [illegible] above [illegible] succeeded by another seam five feet of [illegible] clay, of course [illegible] however, the lines are [illegible] and [illegible] directly on the [illegible] St. Louis group. [illegible] ranges from two to three feet [illegible] ores in this [illegible] the shale, & the roof contains a few [illegible] balls. Among [illegible] Fusulina cylindrica, Productus longispinus and Lingula [illegible] & [illegible] cannot be [illegible] whether [illegible] Seam has not yet been [illegible] fied, and [illegible] was [illegible] [illegible] [illegible]

135 South Fifth Street, Philadelphia, 12 Feb. 869.

Mr. Benigno Malo.

Cuenca, Ecuador.

Dear Sir:

Your favor of the twenty-eighth of last December with its interesting account of the vast mineral resources of your country is at hand and has been carefully read. It is indeed a great pity that such great riches should lie idle so long from lack of the capital and skill to turn them to account; and it seems as if it would quickly cease to be so, as soon as all the world should know as you do so well already, the favorable condition of affairs there. Would not money and brains realize splendid investments there, if some thorough, trustworthy and unbiased accounts of these matters should be published? And would not such a work be done best at the expense of the land owners, merchants or inhabitants in general of your own country? Capitalists here would hesitate to risk even a few thousand dollars for that purpose, as much as they are of the real state of things there, which hundreds of better understood undertakings are asking for capital much nearer home. It is hard to make business men here believe that you who live on the spot and would benefit most by the working of your minerals are not working through slightly rose-colored spectacles in describing the advantages of investing money there. Would not the best way of setting such unworthy suspicions at rest be for your government to order a thorough State geological survey of the whole country? The cost of such a survey would be a trifle compared with the advantage of giving to the world undoubted knowledge of such immense mineral wealth as you speak of.

I remain

Dear Sir,

Very respectfully yours.

Benj. Smith Lyman.

No. [illegible] South 3rd Street, Philadelphia, 185[illegible]

Messrs. R. N. Miller & Co.

New York.

Gentlemen:

Your esteemed favor of the 21st ult. came duly to hand, with its proposals from your correspondent Mr. B. H. Hale of Ecuador, looking to my undertaking the case of a mining enterprise in Ecuador.

In answer please tell Mr. Hale that I could hardly expect to undertake a mining enterprise in Ecuador on lower terms than those already communicated through Mr. R. N. Miller of Mexico, and that even those terms would be hardly [illegible] for a longer engagement than a year or two. Please say also that I have no capital at command for investment in such an undertaking; and that I should only be willing to go to Ecuador for a period that should depend upon the [illegible] and of the project.

As it would give me great pleasure to oblige Mr. Hale if I can, I trust he will find my terms reasonable enough. And remain

Very respectfully yours

Benj. Smith Lyman.

Gentlemen:

125 South Eighth Street, Philadelphia, 12 Feb. 89

R. H. Miller Esq.

189 Broadway, New York.

My dear Richard;

Your favor of day before yesterday inclosing Mabie's letter of the twenty first december came to hand yesterday. I inclose herewith my answer to his letter and to the manuscript you were so kind as to send me. I hope I am not so lengthy as to give you too much trouble in translating for him; at any rate the length is only about a quarter of this.

I could make out the drift of his letter by glancing through it and my wife and I have done better with the dictionary at hand. It must be agreeable to have the whole translated to me by an excellent friend here who has spent a number of years in Central America. I am very glad you did not take the trouble to write out a translation.

With many thanks for all the trouble you have taken in the matter in my behalf, I am, as ever,

Affectionately yours,

Benj. Smith Lyman.

Lawrence, D.

Dear Edward:

Your welcome favor of the 21st is just at hand and I am delighted to hear from you. Of course I do not expect Mr. Grant and Mr. Porter find you in the field as I am sure they will find many things to do there that you can do better than any one else. Of course you will find yourself doing a great many things that you can easily command others to do, but will still have to do.

I have never built any roads or done the surveying for more than a mile or two at a time, but I fancy that the difference between pioneer roads and those that should be as much in the engineering as it comes from the building. A pioneer road ought to be as carefully as any. Often for the trouble of digging a small ditch and a log or two, a bad place can be made good. But as a pioneer road is less carefully built and drained it ought to be laid out if possible in such a way that the natural drainage would be good;

Estate if should avoid as much as may be low wet places. Care
ought to be had to the amount of work
[illegible] to be done, and to the way it would
cut up land. Lots & lines of roads are likely to become
[illegible] of a piece of land, as it is in the
case of a road [illegible] by a road and lots lying
may be much [illegible]. Mr. Fontaine told me the other day
that Gillespie [illegible] was a good road. I have not yet
seen Fontaine upon [illegible] and [illegible] but know it
[illegible] good. I [illegible] is mainly to believe a set of tables and
rules for calculating the amount of earth for cuts and fills.
I suppose Mr. Beckwith [illegible] could; [illegible] probably
more than [illegible]
that I saw him in Chicago. I [illegible] to Mr. Vanderbilt, 96 Broadway
[illegible] to Mr. Hazlehurst, [illegible] if not will write you after
[illegible] following from that Mr. Vanderbilt's engineer is
really [illegible] the subject for their railroads. Mr. Hazlehurst has been greatly [illegible] a railway for many
years. I should like very much to have a finger in the
pie.

You will find in the beginning of Gillespie's Road Making
references to other works on the same subject.

The weather here is charming quite complete, and
must be quite as cold with you.

Mr. Perkins and as well as usual except [illegible] who is
getting over another [illegible] fever attack upon the
Nile, and returned to Alexandria
Yesterday [illegible] yours. Benj. Smith Lyman

135 Rue Montmartre, Philadelphia, 16 Feb. 1867.

Dear Sir,

Here is what Mr. Gruner at the Paris Mining School writes about a certain process of making Bessemer steel from cast iron:

"Method of Mr. Chenot for the fabrication of iron direct from the mineral. After a few days practice he succeeded in getting results almost the same as the Terre-Noire Company. Instead of charging the converter with pig iron, he placed the mineral and blew through it a mixture of carbonic oxide (CO) and carbonic acid (CO_2). Then he added a certain quantity of spiegeleisen, which contained manganese. The inconvenience of this method was that the pig iron was mixed with foreign matters. The method was convenient only when the mineral was free from foreign matters. He found also that the fabrication of carbonic oxide (CO) was too costly, because the carbonic oxide made with ordinary air contained much nitrogen, and consequently much of the heat was lost in heating the nitrogen. He then placed alternate layers of mineral and charcoal in the converter, and closed the chimney of the chauffe. The oxygen of the mineral was taken away by the carbon, first forming carbonic oxide (CO) and then carbonic acid (CO_2). The mineral was then in contact with carbonic oxide (CO), but more often with carbonic acid mixed with nitrogen. But it was not necessary to expend much heat to reduce the ores which were reducible. The result was cast iron, which was then refined. At Millom, in Spain, the ore is first roasted, then smelted. The yield is about 50%. The consumption of coke is about the same as in the Bessemer process. The cost of the ore is about 4 francs per ton. The ore is roasted in kilns, which are 6 meters high, 2 meters wide at the bottom, and 3 meters wide at the top. The kilns are built on a hillside, so that the ore can be charged at the top and drawn out at the bottom. The ore is roasted for about 24 hours. The fuel used is coal. The ore is then crushed and sorted. The pieces that are too small are rejected. The ore is then mixed with limestone and coke in the blast furnace. The blast furnaces are 20 meters high and 5 meters in diameter at the widest point. The blast is heated to about 400°C. The pig iron is then cast into pigs. The slag is used for making cement. The pig iron is then refined in a puddling furnace. The puddling furnace is heated with coal. The iron is then rolled into bars. The bars are then cut into lengths and sold. The cost of the pig iron is about 30 francs per ton. The cost of the bars is about 50 francs per ton. The profit is about 20 francs per ton. The total cost of the iron is about 100 francs per ton. The selling price is about 120 francs per ton. The profit is about 20 francs per ton. The total cost of the iron is about 100 francs per ton. The selling price is about 120 francs per ton. The profit is about 20 francs per ton.

"But this process of Chenot seems to have come to nothing. For, if one fuses the iron, the manganese is separated, and one has immediately steel of fine quality.

"Voici la disposition des appareils à Millom. Les plus part des fours sont en France et en Espagne sont à deux cornues." (I leave out the description of the furnace. The retorts are 0m,40 wide, 1m,50 long, and 7m. high; and are built on a hillside so that the ore can be charged at the top and drawn out at the bottom. The ground at the top is on a level with the railroad which passes the kiln.) "On commence par remplir la cuisse en fonte ou réfractaire" (This is at the bottom of the retort and over the cast iron plate.) "jusqu'à ce qu'elle occupe la place. Puis dans la chauffe on remplit de lits alternatifs de charbon et minerai: 40 kilogrammes de charbon pour 200 kilogrammes de

[illegible] à mesure que la réaction a avancé l'acide de faire descendre la porte [illegible] réduite. (He goes on to describe [illegible] from below and loaded and then [illegible] The charging is done from above and the work goes on continuously.)

"On charge [illegible] fois par 24 heures. On affine les éponges. La [illegible] somme [illegible] considérable. A Millom, par exemple, 264 Kilogr. de minerais, 250 Kilogr. [illegible] houille, [illegible] charbon de bois. Dans la cornue nous [illegible] 10 tonnes par 24 heures. Il ne faut pas conserver les éponges, car elles deviendraient inutiles.

"Cette [illegible] n'a réellement raison d'être que pour l'acier.

"La méthode Remy est imitée de la méthode Uchatius. Le minerai est mis dans des cornues qui sont chauffées dans la chemise d'un four à cuve à vent chaud et à chaleur perdue. L'éponge [illegible] dans le four à cuve et est poussée [illegible] comme méthode perfectionnée."

The American process [illegible] would seem to be about equally [illegible] Renton and Chernoff's ores and no improvement [illegible] Swedish or Russian. Still it would seem to be very suitable for making steel; for the charge can be melted in a [illegible] crucible and melted, the earthy impurities rising to the top, and steel would be [illegible]. Of course for good metal pure ores, that are free from sulphur and [illegible] would be used; but as it is in the Bessemer process. It would seem as if by the [illegible] of melting the [illegible] in the [illegible] and [illegible] steel; and it would perhaps be worth while to suggest to them to try

I am going to-day out to-morrow (Wednesday) morning for Kingsdale, and expect to get home on Tuesday or Friday.

Affectionately yours.

Benj. Smith Lyman.

2323

185 South Fifth Street Philadelphia, 9th Feb. 1869.

Dear Wife:

Your letter of day before yesterday came to hand last evening. I was very glad to have from you the particulars of Father's trouble with his eyes. What he said about them for Three Weeks ago made me feel gloomy, but in the moment of writing for that day it slipped from my mind altogether to give me pain, particularly about it. I trust that it is but a temporary difficulty that may pass away in a few days. I should suppose that the best thing for the eyes would be as much rest as possible, and careful use after they get better. As to his resigning his office, although that will of course be necessary if his eyes should permanently prevent his doing its duties, yet I am afraid we would be less happy without the Office than with it, and should rather hope that he would keep it as long as he can get others with its duties, even if his eyes should be used meanwhile for the purpose. It is for the amount of this salary. I think I can get on to manage my affairs that it would not be much missed; for although I have for a couple years or more earned no great income, yet I feel pretty confident that I could get a pretty good one, with enough to spare beyond my own needs, if I should carry out a plan which I have been thinking of for two or three weeks past. That is to go to Pottsville. There be strong arguments for that step, and (some against it; as I hesitate about taking it quite. There is a great number of coal mines within twenty or thirty miles of Pottsville, and they require a great deal of surveying and mining engineering all the time. Pottsville men are said to get high for their work and to have money to live fast; and as there is a scarcity of good knowledge in that line at Pottsville, and it is said, [illegible] are necessary there who is quick and trustworthy for carefulness, I should stand a good chance of getting some steady work there, and work that would not call me very far from home, but perhaps work that would keep me there pretty constantly. This looks perhaps the most promising for Pottsville seems hardly to be a very pleasant or intellectually profitable place to be shut up in for a few years; but I may possibly be mistaken in this. My present kind of work is in some respects more agreeable taking me to different regions, but being free brings me more in contact with scholars. I have not yet decided

d matter, and would rather not have it said in the meantime. But I have
[illegible] am sparing with Pittsville for fear some one else may step in &
take Lesley's confidence from me, I shall go there; and that would
cause a little [illegible] of my acquaintance. Pittsville, who was with me
at the Fair [illegible] short and settled a question I have ago at Wilbraham
Pittsville, which [illegible] Pittsville, though a
more ago with [illegible]. Perhaps the work may even occupy me
so as to [illegible] a time, of Lesley's project. — The nibble of
which I made mention the other day has not come to anything yet. Last
Monday I [illegible] Chase to [illegible], and he said he would think
about it; but [illegible] looked a little as if he had not known how
[illegible] such a proposal by the month. He was
[illegible] in the meantime [illegible] me in communication with a
friend of his in regard to the more important job to which his agency
[illegible] and by which he had already recommended me; and
I wrote my letter to send to him. — I went up day before yesterday
Tuesday [illegible] took at dinner in works not far from Pittsville
[illegible] night and yesterday morning in Pittsville
and [illegible] last evening. This visit to Pittsville came
[illegible] and I was glad to refresh my recollections of the place
& [illegible]. It seems [illegible] disagreeable than I had been
led to [illegible], and it is quite possible that a man could live quite
a [illegible] there at all. Still, I am not quite sure that five hundred dollars
a year in a Massachusetts village would not be worth more than
seven hundred in Pittsville.

Last week Peggy Lesley got well from her sickness, and
[illegible] Since then Mary was laid up with a fever, from which
she is now nearly well again. The doctor [illegible] the Chase
children [illegible] contagious disease with [illegible] children.
Mrs Lesley left [illegible] on Monday for Rome, New York, to visit
[illegible] mother-in-law, and is to be back today or tomorrow.
He seems to be feeling well, and Mrs. Lesley is so. He says he
has [illegible] nothing [illegible] from Uncle Joseph in Australia, & fears he is
[illegible] as well as usual. Perhaps you have something from them
[illegible].

Give my best to all.

Your affectionate Son.
Benj. Smith Lyman.

[illegible] South Eighth Street, Philadelphia, 21st Feb. 1869.

My dear Fanny:

I [illegible] very welcome and interesting favor of last Thursday came to hand long before yesterday. Your message to my friend this time, if not [illegible] was a sweetener, or at least the threatened stoppage of all communication will serve as a screen; and indeed the only threat is so serious that I suppress in his behalf the message he would send back now, and he must make the best of it. — I am delighted to hear that you are enjoying Mrs. Emmet and readings [illegible] and your own readings too. I too, have this winter first made some acquaintance with the beauties of Paradise Lost and the poems of Milton. Having been inveigled Wednesday last into buying a good fifty cent copy of Milton's poems, and having heard Mr. Hawthorne say [illegible] three years ago that he had never yet seen anybody who had read Paradise Lost through, I determined to do it and to devote to it the book, the half hour or three quarters that I save for such reading before bed-time, and some time since accomplished it. You'll smile presently to myself. Since that I have just read through a familiar copy of Scott's poems, though not [illegible] I am glad you have found your stay at the Willards [illegible] just as I expected you would. Miss Kate Howard was [illegible] the other day to attend Susan of Mrs. Kate Field's [illegible] with effulgence, in the selection of books for reading particularly, and I [illegible] pleasure with [illegible] she looked back on her stay in that place. I am afraid you may find your visit to Brooklyn less agreeable by contrast than if you had gone there from the Willards. I [illegible] you going to Brooklyn if you are wanted there, they are [illegible] your visit of course, and have been all winter. I passed a most agreeable evening some ten days ago with Mrs. Palmer and she has set out in a few days from there for her home in Brooklyn; so if you feel inclined you can drop in and see her while you are there, for she would certainly be delighted [illegible] did, though I did not suggest any such particular [illegible] She will be at "Mr. Chas. Palmer's, at 174 Carleton Avenue; go by the Myrtle avenue cars; close by DeKalb Avenue." After that she will be at "Mr. Gibbons's, 33d Street, New York, opposite the Blind Asylum." That evening it happened that all the family had been invited out to a party at Mrs. Sarah's, Mrs. Wright's sister,

it as they had been invited out on the night of my last call. But this time Mrs. Palmer was rheumatic and was going to stay at home; so she kept me [illegible] and we had a delightful time sitting until eleven o'clock and after, and entertained each most appreciably all the time. I ventured to hint that in spite of my regret at her leaving Philadelphia for some weeks, I hoped the freedom from daily and nightly care of her restless children would be good for her. She flared up good naturedly said she doubted both on any point; and that she hoped and believed in usefulness; that the care of children was to her contrary a pleasure to her; that she knew her children in New York were thinking that she was getting old and would not last long, and that they thought it only fair that they should have what they could of her society then [illegible] to take care of her life; but that she meant to live as long as she could for her own answer and she died at the age of [illegible] eighty-three years & then [illegible] was delighted by this determination on her part and trusted she may carry it out. As she is to be gone some time, letting her know by possible that business might call me out of town before her return, and that I might see her there; and so [illegible] her adieu. — Some three weeks ago I began going to the meeting of Mrs. White's German club, and have now been to three of them; it [illegible] this last week because it came on the night of the Philosophical Society meeting (which is however in some respects less agreeable). Last week, ten days ago, it was at Mrs. Hackett's, and I went before at Mrs. White's. The meeting was quite a good one at Mrs. White's, and I was paired for the evening between two German ladies, Mrs. Shelton Mackenzie and her unmarried sister, who were very [illegible] and agreeable. We played such games as twenty questions and redeem a forfeit. I told the story of the man with the long pistol, which seemed to establish my reputation for talking German. The meeting at Mrs. Hackett's was very small. A lady of German origin but born in Switzerland, Miss Bachman, a teacher of French in Miss Bonton's school has been present at the meetings to answer questions on the language, and the latter distinguished herself it seemed to me at Mrs. White's by the readiness with which she could keep up a steady stream of talk in case of the games that required it, while the whole [illegible] was listening. But she hates the German language for talking, and that gave me a chance to practise talking French a few evenings [illegible] her while waiting for a car after Mrs. Hackett's meeting. Miss Bachman, though she has little beauty and the [illegible] of early youth, nor perhaps good education, has some of the attractions of [illegible] and [illegible] manners. She seems to be a [illegible] and I should like to know her more [illegible]

Mrs. Gilbert was present at Miss Hacker's meeting of the club. Yesterday she [illegible] Gilbert's wandering way. The day before that meeting, the maid [illegible] and told me she wanted to tell me that Mrs. Gilbert and the Kindergarten Society had been treating her. She also said: "Miss Hacker, when you return, ask for Miss Hacker; she is quite an heiress!" "Indeed," said I. "Yes," said she, "she has twelve or fifteen thousand dollars!" I thought she was going to say twelve or fifteen hundred dollars, and was quite taken aback by the largeness of the figure. I thought I might retrieve myself by [illegible] suitable [illegible] In the beginning of the meeting Miss Hacker [illegible] me and [illegible] talked a while with me chiefly in English. She also manifested much confidence in German, thinking that we were entertaining much German she urged me to go to it also. Gilbert, who looked up with expectation. But finding the [illegible] history of the Kindergarten Society, declined [illegible] with a courtesy close and crossed over to [illegible] she is in some respects more agreeable. [illegible] came after the end of the evening in one [illegible] and was short enough. He had after thinking [illegible] of [illegible] for four months failed to get [illegible] on the ground of the moderation of [illegible] but [illegible] which it was [illegible] Yesterday I called with Mrs. Jackson in Franklin Square, and found as usual that circle [illegible]. This time it was Mrs. Jackson, who did [illegible] that evening. But Miss Lucy was at home and [illegible] Miss Helen Kemper of Boston, [illegible] Miss Helen proved to be a lively, bright, well informed young woman, going on towards thirty, I should think, and rather good looking; and she and Miss Lucy made themselves pleasant very agreeably. I had gone there with [illegible] Mrs. Jackson's consent to [illegible] Lucy [illegible] and [illegible] Thursday in Miss Lyman's School, but [illegible] without [illegible] the subject that Miss Lyman had [illegible] engaged Miss Ellen Dewey to begin [illegible] tomorrow as [illegible]. Mrs. Jackson had told me [illegible] some time before, and finally Miss Lyman [illegible] me [illegible] to call on Miss Dewey the next day

I send her copy of ... At Sentinel Miss Dewey's house on Thursday I was met by Miss Jonathan who was there on the same business; the last visit came from Miss Lymans. Miss Thorpe seemed very much amused at Lovering about Miss Lyman's having "sent a young man like me to see about Miss Dewey before engaging her to sing." I did my best to put it in a little different light, although I rather enjoyed the joke, and there was some truth in that view after all, for Miss Lyman was not sorry to have another's opinion confirm her own bias in so important a matter where there was at any rate so little possibility of properly measuring the vocal capabilities of teaching without actually trying them in the school room. — Last Wednesday I went up to the neighborhood of Pottsville to look at some new works for Mr. Lesley, spent the night in that town, and came home again the next evening. Pottsville is ninety three miles from here, northwest, up the Schuylkill, in the great anthracite of the principal Anthracite region. I have frequent occasions of late years to be, and feel sure that I could soon have there a steady, good business that would not call me far away from home. There are so many mines within twenty or thirty miles that there is always geological work and surveying and engineering to be done for which the local engineers are employed. Still, at many accounts I prefer having my headquarters here with any present very irregular engagements. His city is better in a hundred ways to live in than Pottsville, and this kind of work is perhaps pleasanter there than it could be. And yet there is so much to be said in favor of Pottsville, that I am not yet decided whether to go or not. With the Spring there comes more talk of business here, and by waiting a while some of the talk may come to something. — At Pottsville the evening in the barroom was helped off very agreeably by two Italian musicians one of whom played the harp very well and gave us choice pieces out of a number of the best operas besides singing by special request the Carnivalle hymn and a French song although singing was not quite in his line, and giving some popular tunes, such as Captain Jinks of the Horse Marines, a part of which I had never heard before.

Very affectionately yours.

Benj. Smith Lyman.

135 South Fifth Street, Philadelphia, 22 Feb. 1865.

J. Sullivan Esq.
Sydney, C.B.

My dear Sir:

Your favor of the 11th of this month came to hand last week on the eve of my setting out on a short trip to the mountains. I think on the whole it would be best to take Brubaker's offer, if it can be arranged so that you can have $200 clear of all expenses. But in any case that arrangement you will have yourself quite a little compensation for all the trouble you have taken. If you can possibly settle your affairs in that way, I should be content with the $200 net. If I should within a week (before you get this) see fit often all to recommend the sale and take the risks of keeping the land a while longer I will telegraph you to that effect, so that you can act on receipt of this unless you should get before that a telegram to the contrary. It would only be fair for me to pay you something in account for your trouble in the Government judgement; and I wish you would feel no delicacy in taking a liberal compensation for what trouble the matter has already given you, whatever it may amount to, up to $200: If there were any way of making Brubaker pay up his debt I would gladly pay you handsomely for bringing it about; and of course expect you to be finally repaid in full for your trouble whenever he shall settle up. — To judge from some letters of his I saw lately, he seems to be really in a very pitiable condition. He would seem sometimes to be hardly

[See p. 235 for continuation
(by mistake)]

South Fifth Street, Philadelphia, 22 Feb. 87.

Marshall Brennet Esq.
Sydney, C.B.

Dear Sir:

Your favor of the eleventh of this month is this day at hand. I am very far from wishing to taunt you with your inability to discharge your debts or to add to your discouragement in any way. What I meant in the passage you cannot understand is that it seems unreasonable that I should exchange my claim upon the whole of your property until the debt is paid for a certain percentage of its value, no matter what that percentage may be. I have read over my letters to you of the 27th Aug. and 30 Sept. 1885, and find in me no shadow of a foundation for the claim you set up, and that it is utterly preposterous to set up any such claim upon anything in the letters. If you are sincere in in imagining such a claim to be well founded, my command of the English language is quite too imperfect to make you understand me, and our correspondence would become tedious and fruitless. I will say for the third time, that if your friend wishes to make any arrangement with me he would do well to apply directly to me. He may possibly understand me more clearly at first hand than at second.

Yours truly.

Benj. Smith Lyman.

in his right mind; he makes at times the most extravagant and absurd claims upon me, and will state and misstate. He says one thing to help sell him on his legs again by helping him to a reasonable claim for speculation. I do not see how I can help him without probably adding many losses by him, which are already much greater than he probably suspects. Words seem to be quite lost upon him and he returns feebly to the attack; just as I shall have to break off abruptly the correspondence with him sometime, I fear. — I am very sorry to hear that your health and Mrs. MacQueen's is no better than it is this winter. The spring promises to be an early one; indeed, if it should not prove so our trees will suffer very much, for the maple buds were bursting, outside the city, more, a week ago. I trust that with the return of milder weather exhilaration and vivacity of all kinds will bless your household. If ever I should get comfortably established, I shall hope to have a visit from you sometime, and I trust that Mrs. MacQueen could sometimes come up to [illegible] and see in what manner our old claim is held here. — The winter has been a very remarkable one here for mildness; we have had never more than one or two of severe cold, only three times as much as that and it has lasted but a couple of days at most. — My life here is quite a quiet one. I go but little into society. Once a week I go in the evening to the meetings of the Academy of Natural Sciences, twice a month to the meetings of the American Philosophical Society, and once a month to the Franklin Institute. Once or twice a week besides I meet a few of the scientific and intelligent men at the houses of two or three; and the other evenings are pretty taken up with visits to friends and now and then a little social gathering. There is a weekly meeting of a club of ladies and gentlemen for practice and amusement. The numbers are small, but with a little brightness as the spring opens. I have begun with a book on surveying, to be a very complete thing, if I can get it. — I am glad to hear from you a word or two of Nicholas Bowditch. He is a noble fellow, and of the purest type of whom I could talk with you. [illegible]

135 South Fifth Street, Philadelphia, 26 Feb. 1839.

My dear Sir Isaac;

Your very welcome letter of night before last is at hand & I read with it the newspaper, for which I am greatly obliged. Mr Jones returned with us yesterday morning on his way to Boston and did I understand you had had an excellent passage to Albany, and that the journey thence had been in general a pleasant one. I have read & re-read it in the paper and like your views very much, and hope your plan will be carried out. Mr. Barnard seemed to think that there would be a meeting of the association here before long. — I read your communication in the Republican with much interest and recognize some expressions as yours, and others I recognize as coming probably within your district but not quite in your style it seems. Although I see all my associating personalities, however, there is not much said touching our own family and my Springfield acquaintances as seen in the newspapers I am very glad to have a letter from you. — I see I thought that your journal might profit by a few hints in regard to the project for a canal across the Isthmus of Darien. My present authority on that subject is my particular friend Mr Trautwine here, who spent a number of years in that part. He looked particularly at the ground when he surveyed for a canal up the Atrato River and found that the cheapest plan would cost three hundred millions of dollars and was therefore impracticable. He seems to look with no sort of faith upon the project now talked of of building a canal across for one hundred millions, indeed he seems to think it absurd and based upon grossly underestimated estimates of removing the ground & materials; and he has had experience in building this, or the Panama Rail Road. The plan seems to be to get the government to begin the building of the canal, and if a hundred millions be once laid out upon it, it will not be easy to get another hundred to go on with it and then another hundred or two to finish it. It will be a worse job than the Panama Rail Road job; and it seems most hard to understand how this work can be done except patriotically at the Government expense. — Did you notice the telegram from Washington in the morning's Philadelphia Morning Post (perhaps in the Inquirer)

but an interview between my dear brother McClure and Gen. Grant. It threw a brazen and infernal impudence of McClure in a fine light. It was probably prepared for the press by McClure, and rather makes out Grant to have been more cowed by him than I was in my interviews with McClure. He mentioned one point decidedly in Geo. H Stuart's favor, namely that McClure and he were not at all acquainted. Another thing that goes against Stuart as a man of sense is that he was the signer or one of the signers of certain certificates or tickets that were issued in the winter of 1858, declaring that the holder, who had paid so many cents a week for so many weeks, was entitled to a free admission to the heavenly kingdom & to crown of glory, a robe of white and a seat on the right hand of the great ruler. I did not use one of these tickets myself, but plenty of my friends did at the time. They caused something of an outcry about town among the magnates, and then were unexpressed. I suppose he would make an honest Secretary of the Treasury and perhaps a good manager of the office and organizer of its forces; but I have never heard of his being much acquainted with political economy. I should think D. A. Wells would make a very good Secretary of the Treasury, as the Republicans recommended McClure. — McClure bearing towards Grant according to this telegram calls to mind the character of Indians in old times who felt sure of a certain number of scalps with plunder and fighting glory and were fairly beat as their arts and the fact that such character comes to old warriors leads me to suppose that Grant became little by degrees since these times not merely in the manner in which political power is struggled for, but in the spirit; that there is after all in general less of the great principle than formerly. — I discovered last Monday that there was a small German theatre in this town, and Dr. Ellis and I went that evening. The stage was small, at the end of a long narrow room — but was filled with three or four rows of tables running lengthwise of it and a crowd of Germans sitting about. There were the young men in high spirits and the whole house in the full swing of opera, theatre and music and the respectable and respectable married men; in short all ages from three months, more or less, to decided old age. All seemed to be Germans and I believe all were content to drink nothing stronger than beer and eat nothing more costly than pretzels (or the like). The play too carried me back to Germany; it was a Volksstück, or folk-piece function, in five acts (with long intermissions for drinking) and was pretty well acted. There were some pleasing faces among the audience among the young women and the little children, and my admiration for the good qualities of the people was renewed; and I could not help thinking what a mighty institution it would be if every body in it would have every day. If Bismark were to compel every human to that, the Germans would be thoroughly established at the head of Europe in twenty years. They may be after for him even without that, but not so surely nor so fast as in the case. Give my regards to your family and believe me ever very affectionately yours

Richard Smith Lowe

135 South Fifth Street Philadelphia,
1 March, 1869.

To the Postmaster
at Rome, N. York.

Sir:

On the fifteenth of last month I mailed a letter to "Prof. J. P. Lesley, Rome, N. York"; and, as he did not get it before leaving that place, please be so kind as to forward it to him here, to No. 104 South Fifth Street, Philadelphia. He has already written back the same favor to me, but owing perhaps to the miscarriage of his letter or to his forgetting to give his present address, he has not yet received the letter; and now wishes me to ask you to forward any thing you may have for him.

Respectfully yours.

Benj. Smith Lyman.

137 South Fifth Street Philadelphia,
March 1881.

To the Editor
of the Press, N. York.

Sir:

In Mr. Wilson's letter of yesterday's Herald a letter of "Old Subscriber," of the Press, of this city, was referred to in such a way as to imply that it contained some statement reflecting upon the character of Mr. Wilson's paper. As I was solely responsible for the publication of that letter, and as I do not consider it reflected upon Mr. Wilson's paper, I feel constrained to say that I am not responsible for the statements made in the letter, and that I did not see it before it appeared in the Press.

Respectfully yours,
Geo. Childs Drexel.

135 South Eight Street, Philadelphia, March 18

Dear Mary:

Your favor of the twenty-eight came to hand in due time and rejoiced me very much to encouraging account of Father's trouble with his eyes. I trust that the hopes that Dr. Williams has given us will not prove false, and that now the cause of the trouble is understood any repetition of it will be wholly avoided. — Henry Hinckley arrived in Philadelphia Friday night and came to see me yesterday afternoon, and made his call a very agreeable one as he is always wont to do. He was to go on to Washington today and to stay there until the end of next week — did not think we could get to Northampton post office in less time than that. There is a great deal of talking going on about all the people who are going to help inaugurate Grant. Mr. James Barnard got back here with a cold last Thursday which on his way with us here from Baltimore to Washington. These are the only two of my acquaintance who are going to the inauguration, but their individual no doubt a very large number but where the Dana's will stow them all I am not acquainted. Last Col. McClellan who had the impudence to talk as to Grant is the same who is one of my debtors and whom I had such fun dunning to no purpose last spring. Henry delight he has disliked not only his own but Curtis's political views. — Aunt Betsey's engagement took me quite by surprise. Some two or three months ago I met Lucia in the street and she said she had just come from Northampton, which last circumstance me then, more had been there not long before, and was formerly in the habit of not even writing them except at long intervals. She did not see to have been gossiping at all, so I trust Miss Lathrop is not so much so. — Mary and Maggy have got well, but Mary had scarcely left her bed when Annie Brown herself was taken sick with the same ailment, diphtheria, which she had taken from the children I suppose. But she is reported to be a good deal better now though as I understand still in bed. Mr. Tinsley seems pretty well and is off again today on a two days' trip to York County in this state to look at some iron ore beds.

Dear Henry:

2 March 1869. – Mrs. Palmer went to Stratford a fortnight ago, but suddenly got worse, with the expectation of staying several weeks, when she was telegraphed for to come home. Mr. Collier's brother-in-law, Mr. Swinhoe had been struck with paralysis, that still [illegible] at least as last Saturday) leaves him speechless and off [illegible] of his body; but he is conscious and understands what is said to him. It is a very serious blow. I believe Swete has [illegible]. Hopper was knocked down in the street by some runaway horse and had his arm badly broken. I saw at his house on Saturday morning and found him doing pretty well and in good spirits although he and [illegible] of pain. The same arm was broken many years ago, and he thinks it must be by this time an curious object that he has bequeathed the bones to the museum of the medical department of the University here, he says. He said that Mr. James Hitton of Stratford had arrived at his house the night before on his way home from [illegible] and had been taken [illegible] ill; so that I did not see him. Mr. Hopper was nursing him. – I was at Mrs. Howe's this morning and found her getting better, Lily getting [illegible] and very lively. The children seem likely to be well. – Mrs. Howe's morning a letter from Edward Howe who is still [illegible] Hopper's mind at Somerset and is filling the place of [illegible] assistant superintendent of the Pomeroy Iron Works, a considerable rolling mill. The superintendent is away on business a good deal of the time and Edward has to [illegible] things in his absence, and see that things go on well. He certainly seems to be in luck, and it seems as if he might get married as well as not within a few months; and that is much better than he had a right to expect when he became engaged. – Last Thursday Stratford by invitation at the Rooms, and four or five young folks mostly ladies were expected to be of the party; but owing to bad weather only one young lady and gentleman besides myself were there. The young ladies, both were [illegible] and those who were not were former pupils of Miss [illegible], and are in whose special honor the entertainment was got up was been making a visit here from Canada with [illegible] was a boarding pupil here a few years ago.

Give my love to all! Your affectionate Brother.
Benj. Smith Lyman.

North Fifth Street, Philadelphia, 3 March 1869.

Wm. Edward R. Howe,

Painesville, Ohio.

Dear Edward:

Your favor of the twenty fifth of last month came to hand yesterday, and the same day I forwarded to you by Express ("the Central," which seems to have absorbed the Hamilton and Eaton) the three books you asked for, and it gave me pleasure to be able to serve you in that way. The Bigelow Statistics cost three dollars, the Urbin one dollar, and the Egyptian two dollars, making six dollars in all. The Taylor is not very clean on the edges of the leaves which seems to be sound and on the inside in good condition, and perhaps you can have the edges either trimmed in re-binding sometime or colored dark without rebinding. It was the only copy left at Leary's, and a new copy at Bain's proved to cost twice as much. It turned out that Leypsinet's that they had no more copies of Egyptian in sheep, at $2.75, and they thought that those copies were of an earlier edition; and the "tuck" copy cost two dollars, which seems to be a good deal less than the catalogue price; so I took the responsibility of getting it. — Have you got "Bauerman's Treatise on the Metallurgy of Iron; containing outlines of the History of the Iron Manufacture, Methods of Assay and Analysis of Iron-Ores, processes of Manufacture of Iron and Steel;" [illegible] edition, revised and enlarged, with an appendix

Mr. Edward Hale,
Philadelphia, Pa.
1869

Dear Sir:

on the Martin hereafter making steel, from the reports of Abram S. Hewitt; illustrated with numerous wood Engravings; one vol. 12 mo, cloth $1.50" published by D. Van Nostrand 192 Broadway, N.Y. It would seem by its advertisement to be a good book and cheap. Percy's Metallurgy of Iron seems to be a good book too, but probably larger somewhat, a stout octavo.

The Lesleys are much interested in hearing of your good fortune. Mr. Lesley is just now out of town on a little geological work for two or three days. Mrs. Lesley is just getting over an attack of diphtheria which she seems to have caught from the children who had it one after the other; so they have had somebody sick a bed there for three or four weeks almost all the time.

Brownies here is still very dull though perhaps looking a little better than when you were here. I had a little flush of a day or two up to Pittsville some ten days or two weeks ago, and saw that pleasing place for the first time in six years. Everything at Ringgold block & the mills works first-rate. Found them out of blast, and the furnace pulled down. I am delighted to hear that you are getting on so well and that your prospects are so promising, and hope that things will turn out even better than you have for; and I remain as ever

Affectionately yours.

Benj. Smith Lyman.

Dear Sir,

Yours truly,

[Christian Examiner Journal of History.]

The Blue Flower.

From Heinrich of Ofterdingen, an Unfinished Novel by Novalis. Translated from the German by Benjamin Smith Lyman.

Friedrich von Hardenberg, who died at Weissenfels in Saxony, in 1798, and died in 1801 not quite twenty-nine years old, but already much admired and lamented under the name of Novalis.

In the early days of the Middle Ages there lived in the land of Thuringia a young man named Heinrich von Ofterdingen. His father had been a rich merchant, and had left him a handsome property. Heinrich had received a good education, and had been brought up with the greatest care. He was a youth of about twenty years of age, of a lively disposition, and of a mind naturally inclined to poetry and meditation. He had already made several journeys into the neighboring countries, and had begun to feel a strong desire to see the world and to become acquainted with men and manners.

One day he set out with a party of merchants who were going to Augsburg, where he intended to dispose of his property and to purchase goods for the Thuringian market. He had already passed the boundaries of his native country, and had entered the province of Franconia, when, on the second day of his journey, he came to a village at the foot of a peaked hill that was broken up by deep hollows. The country was fruitful and pleasant, although the tops of the hills had a dead, forbidding look. The inn was neat, the servants were ready and willing, and a number of men, partly travellers, partly mere drinking guests, sat in the room and chatted on all sorts of things.

Our travellers mingled with them and joined in their talk. The notice of the company was drawn above all to an old man who sat in a foreign garb at a table and answered good-naturedly the questions that were put to him. He came from foreign parts, had that morning made a careful ascent through the neighboring country, and was now telling about his trade and his observations of the day. The servants called him a treasure-digger. But he spoke very modestly of his knowledge and power, although what he said bore the stamp of strangeness and wonder. He said he had been born in Bohemia. From his youth up he had had an eager longing to know what was hidden inside of the mountains, to know where the water in the springs came from, and where were found gold and silver and the precious stones that men drew to themselves in spite of everything. He had often looked in the neighboring cloister chalk at the flaming lights on the pictures and shrines and only wished that they could talk to him, so as to tell him of their mysterious source. He had sometimes heard that they came from far off countries; but he had always wondered why there should not be such treasures and jewels in his own neighborhood. Surely the mountains were not for nothing so long and lofty and so strongly barred; it had seemed to him as if he had sometimes formed shining and glittering dreams in the mountains. He had clambered about busily among cliffs and caverns, and had looked around him with indescribable pleasure in those most ancient halls and [illegible] At length he then fell in with him one day a traveller, who told

he ought to become a miner, and that he could satisfy his [illegible] for knowledge. That there were mines in Bohemia. That he only to go right down the river; that after ten or twelve days he would be in Eula; and that there he had only to say that he would like to be a miner. He did not need to be told that twice, and he set out the very next day.

After a tiresome walk of several days, he went on to say, "I came to Eula. I cannot tell you how gloriously I felt when from a hill I caught sight of the huge opening, that were grown over with green bushes and had wooden buildings upon them; and when I saw the smoke of them rise over the woods out of the valleys. At first my novice still further raised my hopes, and with more wonder than you can believe and full of silent devotion I stood over such a heap (which they call a tip heap)! Before the shaft of the building led down into the hill. I hurried to the valley and soon met some men with lamps and clothed in black, whom I rightly took for miners; and with my measures made my wishes known to them. They listened to me good naturedly, and told me just to go the smelting furnaces further down, and ask for the Captain, for so they call their leader and master; he would let me know if I could be given a place. They said that I should likely get my wish easily; and they taught me the common greeting, "Good luck!" with which I should address the Captain. Full of happy hopes I went on my way, and soon

---

*"Glückauf!" The true meaning of this greeting is unknown even to many Germans. According to a very old account of it the meaning would seem to be: "May you have the good luck to open up (Glückauf aufzuschliessen) rich ore!" On the other hand "Glückauf zu!" was thought by the miners to have a bad meaning, namely: "May you have the luck to have the rich ore veins shut to (zu zu schliessen) against you!" - Translator.

---

make an end of saying over to myself this greeting so full of meaning. I found an old, venerable man, who welcomed me with great friendliness; and after I had told my story and had told him [illegible] great kind I had learn[illegible] things [illegible] readily promised [illegible]

[illegible]

[illegible]

I seemed to please him, and he took me into his house. I could hardly wait for the morrow, when I was to go into the mine and array myself in the charming garb. That very evening he brought me some mine clothes, and showed me the way to use some tools that lay stored away in a chamber.

In the evening some miners came to see him, and I lost not a word of what they said, however strange to me and beyond my understanding were the words and the greater part the matter of their talk. I laid the little that I thought I took in added to the liveliness of my mood to know more, and kept me busy at night with strange dreams. I awoke betimes, and went to my new host, who had already one by one the miners gathered together to take his orders. A room close by had been made into a little chapel. A monk came in and read a mass, and after that made a solemn prayer, in which he called on heaven to take the miners in its holy keeping, to uphold them in their dangerous work, to guard them from the attacks of and wiles of evil spirits, and to grant them to strike rich veins. I had never prayed with more warmth and had never taken in the high meaning of the mass in a livelier way. My future comrades seemed to me heroes of the nether world, who had to overcome a thousand dangers, but had at the same time a most enviable lot with their wonderful knowledge, and in their earnest, silent fellowship with the rock and of nature became fitted to have heavenly gifts and to be lifted up with joy above the world and its griefs.

After worship was over, the Captain gave me a lamp and a little wooden crucifix, and went with me to the shaft, as we call the steep entrance into the underground workings. He taught me the art of going down, told me the needful rules of foresight, as well as the names of the manifold things and their parts. He went on in front, and slid down on the round beam, which he held with one hand as a rope that slid along with a loop as a side rail, and in the other hand carried the lighted lamp. I followed his leading, and we soon reached a good space as pretty great depth in that way. I was strangely awestruck, and the front light twinkled like a lucky star that showed me the way to the hidden treasures of nature. We came to the bottom into a labyrinth of galleries and my good nature

was never tired of answering my questions, nor of telling me about his art.

The rushing of the water, the distance of the surface where men dwell, the darkness and crookedness of the galleries and the far off noise of miners at work greatly delighted me, and I felt myself now with joy to have in full what had ever been my strongest wish. No one can unfold and set forth this fulfilling of an inborn wish, this wonderful joy in things that seem to be long closely tied up with our inmost being, with the business for which you have been called and fitted from the cradle. Perhaps they would have seemed to any body else common, unmeaning and disagreeable; but to me they seemed as needful as air to the lungs or food to the stomach.

My old master was pleased with my hearty enjoyment, and promised me that by working so busily and so carefully I should get on well and become a skilful miner. With what devotedness did I see for the first time in my life on the sixteenth of March, forty five years ago, the ring of metals in fine leaves between the joints of the rock. It seemed to me as if he were shut up here in a strong prison and begged kindly of the miner who had with such great dangers and hardships broken his way through the strong walls to him, to set to bring him out to the light of day, that he might carry to honor as royal crowns and vessels and holy relics, and in valued and well guarded coins adorned with likenesses rule and guide the world. From that time I longed in Earth, and rose step by step to be a cutter (that is, the real miner who works in the rock), after I had been set, to start with, to carrying out in baskets the loosened lumps of ore.

The old miner rested a little from his account, and took a drink, while his watchful listeners gave him a cheerful "Good luck." The words of the old man rejoiced Henry very much, and he felt very much like hearing more from him.

The listeners talked with each other of the dangers and wonders of mining, and recounted strange tales, at which the old man often smiled, and in good naturedly took the pains to set them right in their odd notions.

After a while Henry said: You have likely since that seen and undergone many strange things; it is to be hoped that you have never been sorry for the life you chose? Would you be so kind

days as to tell us how it has gone with you since then, and as what journey you are now engaged? It seems as if you had looked about a great deal in the world, and I can see in that you now stand for more than a common miner.

It pleases me well to, said the old man, to recall the times gone by; I find in them reasons for rejoicing in the mercy and goodness of God. Fate has led me through a happy and cheerful life, and not a day has passed that I have not laid myself to rest with a thankful heart. I have always been lucky in my affairs, and our father in heaven has shielded me from the evil one, and let me grow gray in honors. Next to him I have to thank my old master, who has long since been gathered to his fathers, and on whom I can never think without tears. He was a man of the olden time, after God's own heart. He was gifted with deep insight, and yet childlike and humble in his behavior. Through him mining came into a very flourishing state and brought vast wealth to the Duke of Bohemia. The whole country became very that means well peopled and thriving, and is now a blooming land. The miners add honor to him as a father, and as long as Eule stands his name will be spoken only with feeling and [illegible]. I was by birth a Lausatian, and his name was Werner. His only daughter was still a child when I came to the house. My industry, my faithfulness and my warm attachment to him won his love for me more and more every day. He gave me his name, and made me his son. The little girl became grown up, a cheerful, lively creature, whose face was as pleasantly smooth and white as her nature. The old man said to me often, when he saw that I was glad to play with her and could not keep my eyes off from hers, that were as clear and open as the sky and shone like crystal; he said, that if I became a good miner, he would not refuse her to me; and he kept his word.

The day that I became a cutter, he laid his hands on us and blessed us as a betrothed couple, and within a few weeks after that I led her as my wife up to my chamber. That same day that I became a cutter, I struck a rich vein in the morning shift while still a cutter's apprentice, just at sunrise. The duke sent me a golden chain with his likeness as a large coin, and promised me the place of my father in law. How happy I was when I could hang it on my bride's neck on the wedding day and every eye was turned upon her. The old father lived to see several likely grandchildren, and

the lode of his autumn was richer than he had looked for. He could sink his shaft with joy, and go out of the dark mine of this world, to rest in peace and wait for the great pay day.

Sir, said the old man, as he turned towards Henry, and dried his eyes, it must be that mining is blest by God! For there is no art that makes its followers more buckish, that more awakes faith in a heavenly wisdom and care, and keeps the heart more purely guileless and childlike. The miner is born poor, and poor he dies. He is satisfied to know where the metallic powers are found and to bring them to light; but their dazzling splendor has no power over his pure heart. Unkindled by dangerous made riches he rejoices more over their wonderful shapes and the strange veins of their source, and prestiggles as then over their all promising ownership. They have for him no charms any more when they have become merchandise, and he seeks them amid darkness and hardships in the fortresses of the earth, rather than follow their call into the world and strive after them on the surface of the ground with cheating and cunning arts. These hardships keep his heart free and his mind strong; he enjoys his hearty supper with [illegible] and creeps up every day with renewed enjoyment of life into the dark caverns of his calling. He alone knows the warm twilight and rest in the goodness of the free air and of a wide outlook, to him alone do food and drink taste refreshing and devout, as it were the body of his Lord; and with loving and tender feeling does he walk among his peers, or about his wife and children and delight himself truthfully with the fair gift of families life!

His lonely business keeps him a great part of his life away from daylight and from fellowship with men. He does not accustom himself to a dull lack of feeling towards these lofty, deep meaning things, and keeps the childlike frame of mind in which everything shows itself to him with its own spirit and in its first bright colored wonderfulness. Nature does not wish to be mined solely by one man. As a thing mined she changes herself into a bad poison that scares away rest, and brings on the miners lust to draw everything into the circle of the lobber, and with it the strings an endless chain of cares and wild passions. So she surely undermines the good work of the owner, and buries him too in the yawning gulf that he has dug for them, and little by little [illegible] to belong to everybody.

On the other hand how quietly the miner works in his deep and lonely far away from the restless upper world's hubbub of day, and only quickened to harmony by thirst for knowledge and by love. He thinks in his loneliness of his comrades and their families with hearty goodwill, and feels ever anew the needfulness of men one to another and their kinship. His calling teaches him untiring patience, and does not allow his mind to lose itself in useless thoughts. He has to deal with a wonderfully hard and unyielding power, that is to be overcome only by steadfast industry and steadfast watchfulness. But what a rare growth blooms for him in these awful depths, real trust in his heavenly father, shrewd and and forethought are shown to him every day by unmistakable signs. How many countless times have I sat in the mine at the face, and by the light of my lamp worked on the homely crucifixus with the keenest devotedness! There did it first mightily take in the holy meaning of this mysterious image, and often as I struck the richest vein of my hand, and that has yielded me ever lasting gains.

The old man went on after a while, and said: Truly that must have been a godlike man who first taught men the noble art of mining, and laid in the work of the rocks his picture of human life. Here the stone is brittle and crumbling, but poor; there the rock finishes it off in a wretched, trifling cleft, and just like the richest ores are found. Other veins lessen its richness, until a kindred vein kindly joins it, and raises its worth immeasurably. Often it splits up and before the miner's eyes a thousand strings; but full of patience he does not let himself be frightened, he keeps quietly on his way, and does his good rewarded when he discovers it soon again in new thickness and kindliness. Often a treacherous leader entices him out of the true course; but soon he knows the way is wrong, and he drives right across by main force until he has found again the true overbearing vein. How well the miner learns here to know all the humours of chance, but how everyday the fact that zeal and steadfastness are the only unfailing means to master them, and to wrest from them the stubbornly guarded treasure.

Of course, said Henry, you have no lack of enlivening songs. I would say rather, that your calling must stir you up to singing in spite of yourself, and music must be a welcome companion to miners.

You have spoken the truth there, answered the old man; singing and zithern playing belong to the life of the miner, and no rank

in life can enjoy their charms with more pleasure than ours does. Music and dancing are real joys for the miner; they are like a cheerful prayer, and looking back on it and forward to it help to lighten and shorten the long loneliness.

If you please, I will treat you forthwith to a song that was much sung in my youth.

Nain who Earth's depths doth measure
She doth as lord severe;
Who findeth only pleasure
within her bosom dear;

*

Who, at her stone limbs peering,
Their hidden plan doth know,
And all commands all conforming
doth in his workshop go.

*

He is with her united
And heartily allied;
She doth his love requited,
As if she were a bride.

*

He looketh on her daily
With love renewing zest,
And visiteth him gaily,
She leaveth him no rest.

*

She favoureth him greatly,
And doth him kindly show
The story grand and stately
Of ages long ago.

*

Upon his face is streaming
The air of early time,
And through the dark clefts beaming
A deathless light sublime.

*

Whatever in his courses
Summeth well known land,
Gladly helps her forces
The working of his hand.

*

*

*

*

*

*

251

*

Him will the snakes follow
Right helpful up the hill;
To him each rock closed hollow
Its treasure open will.

*

To the King's house he letteth
A golden flood pour down;
With noble gems he settleth
Full many a kingly crown.

*

There to the king he reacheth
His gifted hand, be sure;
Yet should return beseecheth
And joyful liveth poor.

*

On plains in purple fountains
Blood gushes for reward;
He stills it on the mountains
The world's high-hearted lord."

---

*A more republican form of the two last verses but one would be:

Unto the State he letteth
A flood of riches down;
As if with gems, he settleth
The land with many a town.

*

There to the state he reacheth
His gifted hand, be sure;
Yet should return beseecheth
And joyful liveth poor.] — Translator.

The song pleased Henry highly, and he begged the old man to give him still another. The old man was willing, too, and sang: "I know, alike enough, another wonderful song, but comes we do not know whence from.

A travelling miner brought it to us; he came from a great way off, and was a remarkable seer of the divining rod. He saw what no

much, because it sounded so strangely, almost as dark and hard to understand as the music itself, but for that very reason drew us as beyond measure, and in working hours entertained like a dream.

[illegible]

[illegible] towers
Within the wide and barbarous [illegible]
[illegible] encompassed his towers.
Nine maidens [illegible] in pleasure hall,
Feast-women graceful and duly keeping,
Pace only with [illegible] footfalls dancing
Down from the [illegible] to fall.

*

[illegible] his knights upon sideviews
[illegible] like [illegible]
They gaze [illegible] true,
Redeemers [illegible] remaining.
[illegible] heavily within their steel,
Silent [illegible] as tender,
[illegible] with [illegible] look with [illegible],
Down from his [illegible] white hand.

*

Old is his castle, strange and rare;
[illegible] dream, out of deep seas falling
Tower, [illegible], and [illegible],
[illegible] heavens penetrating.
From thence around his subjects all
[illegible] land is lying;
And down like conquering flags are flying
Adown the lofty working hills wall.

*

A vault, immeasurably [illegible]
Around the [illegible];
Each fills a faithful [illegible]
And with sweet words his word [illegible].
They long to him good luck [illegible],
[illegible] dream not that [illegible],
By blinding fondness all [illegible],
[illegible] they have not known.

19

But few are crafty and awake,
And aware for his gifts are pining;
Unceasingly they undertake
The ancient castle's undermining.
[illegible] hands alone can take away
The dark old curse of existing human.
If once laid bare the halls portrait,
Then shrunk the knight of [illegible]

*

The buoy find no wall too high,
The wave go down the deepest hollow;
Who an iron heart and sound body
Upon the single track promptly finds.
Him from his chambers forth they thrust,
[illegible] spooks they chase with utter fright,
The raging floras they fully muster,
And rouse him with [illegible]

*

The more he now comes forth to light,
And sunbeam round the earth he charges;
The more is slowly curbed his might,
[illegible] of the free enlarges.
It [illegible] through empty [illegible],
From every hindrance freed, he roams,
And to us with green wings soft comes in
[illegible] of our rooms.

It seemed to Henry, when the old man had ended, as if he had already heard the song somewhere. He got him to go over it again and wrote it down. After that the old man went out, and the merchants talked with the [illegible] guests in the meantime of the use of mining and its hardships. One said: The old man, you may be sure is not here for nothing. He clambered about among the hills today, and has no doubt found good signs. Let ask him, when he comes in again. Be you [illegible], said another, we could ask him to find water for our village? The water now is a long way off, and a good well would be very welcome to us. It comes into my head, said a third, that I might ask him to take along with him my son that has filled the whole house full of stones. He boy is sure of making a skilful miner, and the old man

135 South Fifth Street, Philadelphia,
5th March, 1869.

W. S. Laird Esq.
Willow West above Broad.

Dear Sir,

Please send me as early tomorrow morning as you can half a ton of Lorberry Coal [illegible] size, or coal as near like that as may be, and oblige

Yours respectfully
Benj. Smith Lyman.

it's honest and sure to get something good out of him. The merchants said if they could not perhaps start a paying traffic with Bohemia through the miner, and in that way get metals at good prices. The old man came into the room again, and they all wished to avail of his acquaintance. He began by saying: How close and uncomfortable it is here in this little room, isn't it? The moon stands out there in full glory, and I have a great mind to take a walk yet. I have seen by daylight today some remarkable caves near here. Perhaps some of you will have a mind to go too; and if we only take lights with us, we can look about inside there without trouble.

These caves were already known to the villagers; but until now no one had ventured to go into them; they chatted themselves with the kind with frightful stories of dragons and other monsters that dwelt here. Some maintained that they had themselves seen the caves, and averred that bones of men and animals that had been seized and eaten up were found at the entrances. Some others believed that a ghost dwelt here, for they had seen from a strange human form from a good way off, and had heard singing at night from over there.

The old man seemed to give them so great faith, and assured them with a laugh that they could go along without fear under shelter of a miner, since the monsters must be afraid of him; but that a singing ghost was surely a good being. Love of novelty gave many courage enough to take up with his plan: Henry wished to go too, and his mother at last yielded to his prayers, when the old man had spoken to her, and had promised to take good care of Henry [illegible]. The merchants were quite like minded. Long pine splinters were gathered for torches, a part of the company furnished themselves even overmuch with ladders, poles, cords and every kind of safeguard; and so the pilgrimage to the neighboring hills began at length. The old man went in front with Henry and the merchants. The peasant had brought his knowledge loving son, who took hold full of joy took hold of a torch, and showed the way to the caves. The evening was fair and warm. The moon stood in mild brightness above the hills, and raised wonderful dreams in every creature. Just like a dream of the sun it lay over the inward looking [illegible] world, and led all nature with its countless parts back into that fabulous early time, when every [illegible] slumbered

apart by itself, and lonely and untouched longed in vain to unfold the dark fullness of its boundless life. Henry's the tale of the evening was overcome. It was to him as if the world lay all open within him, and showed him as a guest all her treasures and hidden delights. The great, simple show around him seemed so easy to understand. Nature seemed to him not to be partly taken in only for the reason that she piled up around them the nearest and most familiar with such a lavishness of manifold utterance. The words of the old man had opened in him a tapestry hidden door. He saw his little dwelling chamber was built close to a lofty minster, out of whose stone flew the solemn ancient world rose up, while from the dome the bright, cheerful future in the form of golden angel children floated and sang before it. Mighty sounds trembled in the silvery singing, and all creatures went in at the wide doors, every one of whom clearly spoke out his inner nature in a simple prayer and in a tongue of his own. How amazed was he that this clear view, already so needful to his being, had so long been unknown to him. Soon he opened at once all his ties to the wide world around him; felt what he had become through it and what it would become to him, and he quite took in all the strange notions and goodings that he had often found in its books. The merchants' story of the young man who studied nature so busily and became the king's son-in-law came again to his mind, and a thousand other things that resulted in his past life of their own all tied themselves to a magic thread.

While Henry gave way to his thoughts the company had come near the cave. The entrance was low, and the old man took a torch and clambered over the stones into it the first. A pretty plainly felt stream of air met him, and the old man assured them that they could follow him without fear. The most faint-hearted went last, and kept their weapons in readiness. Henry and the merchants were behind the old man, and the boy walked delighted by his side. The way ran at first through a rather narrow passage, that soon ended however in a very wide and high cavern, which the torch light was not able to light up fully; still there stood in the background some openings let through into the bare wall. The ground was soft and pretty even; the walls as well as the roof were not rough nor uneven either; but

What chiefly caught the eyes of all was the countless number of bones and teeth that covered the ground. Many were quite well kept, others you saw signs of rotting, and those that were and there stuck out of the wall seemed to have turned into stone. Most of them were of uncommon size and strength. The old man was much pleased at these relics of a very early age; the peasants alone did not feel quite right here, for they took them for many kinds of beasts they saw near at hand, no matter how clearly the old man showed them the signs of a time and of [illegible], and asked them if they had found any traces of hair among their heads and of [illegible] men of the neighbourhood, and if they could take these bones for the bones of human beasts or of man? The old man was now for going further into the hill, but the peasants found it best to withdraw to the entrance of the cave and there await his return. Henry, the merchant and the boy kept with the old man, and furnished themselves with cords and torches. They soon came to a second cavern, where the old man did not forget to mark the passage out of which they had come by a figure of bones that he laid before it. The cavern was like the former one, and was just as rich in animal remains.

Henry was enraptured and full of wonder; it seemed to him as if he were wandering through the front courtyard of the inner earth-palace. Heaven and earth lay all at once a great ways off, as it seemed to him, and these dark wide halls seemed to belong to a strange kingdom of the nether world. How, thought he to himself, could it be that a world by itself moved with a monstrous life under our feet? That unheard of races had their being in the fortresses of the earth, whom the inner fire of the dark bosom swelled up to gigantic and great-souled forms? What if some day these awful strangers, driven forth by the increasing cold, should come among us, while perhaps at the same time heavenly guests, living, speaking powers of the constellations, should become seen over our heads? Are these bone relics of their wandering towards the surface, or signs of a flight into the depths?

[The party soon find a man loving hermit in the cave, and have a long talk with him. In the course of it he says of the Ld. miner:]

You must have travelled about a good deal then, and no doubt you have seen a great many remarkable things.

Our ancient forces us to look about a good deal on the surface of the earth, and it is as if a fire of the netherworld drove the burrowing mole from one hill to another. He is never done with burrowing, and through his whole lifetime he has something to learn of the wonderful workmanship that has so strangely founded and inlaid the floor under our feet. Our art is very old and widely spread. It travelled perhaps like our race from the east with the sun towards the west, and from the middle towards the ends. It has everywhere had to deal with new hindrances, and as necessity ever stirs up minds with to cunning inventions, the miner can everywhere add to his knowledge and skill, and enrich his name with useful experience.

You are almost the counterpart of the astrologer, said the traveller. If they study the heavens joyfully, and wander through the immeasurable spaces, you stare your eyes to the ground and search out its framework. They study the forces and influences of the constellations, and you search in the stones of rocks and veins and the manifold workings of earthy and stony layers. To them the heavens are a book of the future, while to you the earth is a monument of the early world.

This agreement is not without meaning, said the miner smiling. The shining prophets play perhaps a chief part in that old building up of the wonderful building up of the earth. Perhaps they will be better known and understood in time from their works, and their works from them. Perhaps the great mountain chains above the races of their former parts, and had been a mind to nourish themselves without help, and to go on their own way to heaven. Many raised themselves boldly enough, that they might become stars too, and must therefore for that reason do without the fair green clothing of lower places. They have got nothing in return, save making the weather for their fellows, and are prophets for the lower country, but they are seldom more flood with thunderstorms.

Since I have dwelt in this cave, the hermit went on to say, I have learned to think more upon the olden time. Words cannot tell how taking this study is, and I can easily see how a miner must cherish for his trade. When I look

in the strange old times that swarmed here in such mighty numbers; when I think of the wild time [illegible] outlandish, monstrous beings swarmed into these caves in thick crowds, driven perhaps by fear and dread, and found here their death; when I remount to the times when these caves were closed up and vast floods covered the land; I seem to myself like a dreamer of the future, like a child of everlasting peace. How quiet and peaceable, how mild and bright by the side of those mighty, gigantic times is the nature of today! and the most frightful storm the most horrid earthquake in our day is only a feeble echo of those awful birth pangs. Perhaps to the world of plants and animals, yes, even the men of those times, if there were any on islands here and there in that ocean, had a stronger, rougher build, — at least the old stories of a race of giants then ought not to be taxed with being a mere fiction.

It is pleasing, said the old man, to remark that quieting down of Nature step by step. A more and more humane understanding, a more peaceful agreement, a mutual upholding and quickening seem to have grown up little by little, and we come to better and better times. It might well be that now and then some of the old leaven worked yet, and that some heavy quakings followed; nevertheless you can see the all powerful striving for a freer, more harmonious state, and in this spirit every quaking will pass by and lead nearer to the great end. It may be that nature is no longer so fruitful, that today no metals nor precious stones, no rocks nor mountains take their rise; the more her power to create has been used up, the more her shaping, unfolding and social powers have grown, her heart has become softer and tenderer, her fancy more manifold and symbolical, her hand lighter and more skilful. She comes nearer to man, and if she was formerly a game bearing [illegible], she is now as still, a flowering plant, a dumb, manlike artist. And for what would it be needed to gain more of those treasures, which are already more than enough for untold ages. How small is the space that I have travelled through, and what mighty stores have I not found at the very first glance, the using of which is left for after times. What riches do not the mountains of the north shut in, what promising signs did I not find everywhere in my native country, in Hungary, at the foot of the Carpathian mountains and in the rocky valleys of the Tyrol, Austrian and

Bavaria. I could be a rich man, if I could have carried with me what I had only to pick up or to knock off. In many places I looked around me as if in a magic garden. What I saw was formed of the costliest metals and most skilfully. In the beautiful hairs and sprays of silver hung shining ruby red transparent fruits, and the heavy trees stood on a crystal ground that was worked up in quite inimitably. You scarcely trusted your senses in these wonderful places and were never tired of wandering through these shimmering wildernesses, and of delighting in their jewels. In the journey of mine now I have seen many remarkable things too, and surely the earth is in other countries quite as richly gilding and lavish.

There is no doubt of that, said the unknown, if you think of the treasures that have their home in the east; and have not the far Indies, Africa and Spain been known even in ancient times for the riches of their soil? A warrior to be sure does not give close heed to veins and clefts in the mountains, but nevertheless I have sometimes had my thought about these shining streaks that like strange hints point to an unlocked for treasure and fruit. How could I then have thought, as I gaily passed in the light of day these dark dwelling places, that I should yet end my days in the bosom of a mountain.

185 South Fifth Street, Philadelphia;
8 March, 1869.

To E. B. H.
Ledger Office.

Sir:

Mrs. Charlotte Kennard has noticed your advertisement in the Ledger for "a woman and wife without children to keep and clean and make fires," and thinks that she and her son, who is twenty one years old, might answer your purpose. She is a strong worthy widow woman, has lived for many years in this building, is thoroughly honest and very neat and painstaking in the care of offices, and is quiet, good natured and bright. Her son likewise is quite trustworthy, active, handy and bright and has had experience in the care of offices. Her only other child is a daughter sixteen or seventeen years old who is a help to her mother in her work.

Respectfully yours.
Benj. Smith Lyman

Der ist der Herr der Erde,
Wer ihre Tiefen misst,
Und jeglichen Beschwerde
In ihrem Schooss vergisst.

*

Wer ihrer Felsengründer
Geheimen Bau versteht,
Und unverdrossen nieder
Zu ihrer Werkstatt geht.

*

Er ist mit ihr verbunden,
Und inniglich vertraut,
Und wird von ihr entzunden
Als wär' sie seine Braut.

*

Er sieht ihr alle Tage
Mit neuer Liebe zu,
Und scheut nicht Fleiss noch Plage,
Sie lässt ihm keine Ruh.

*

Die manchfaltigen Geschichten
Der längst verflossnen Zeit
Ist sie ihm zu berichten
Mit Freundlichkeit bereit.

*

Der Vorwelt heil'ge Lüfte
Umwehn sein Angesicht,
Und in die Nacht der Klüfte
Strahlt ihm ein ewges Licht.

*

Erstrifft auf allen Wegen
Ein wohlbekanntes Land,
Und gern kommt sie entgegen
Den Werken seiner Hand.

*

Ihm folgen die Gewässer
Hilfreich den Berg hinauf;
Und alle Felsenschlösser
Thun ihre Schätze ihm auf.

*

Er führt des Goldes Ströme
In seines Königs Haus,
Und schmückt die Diademe
Mit edlen Steinen aus.

*

Zwar reicht er treu dem König
Den glückbegabten Arm,
Doch fragt er nach ihm wenig,
Und bleibt mit Freuden arm.

*

Sie mögen sich erwürgen
Am Fuss um Gut und Geld;
Er bleibt auf den Gebirgen
Der frohe Herr der Welt.

*

Der ist der Herrscher Erde,
Wer ihre Tiefen misst,
Und jeglichen Geschwätz
In ihrem Schoss vergisst.

*

Wer ihrer Heimat leidet
Geheimen Gram verzehrt,
Und unverdrossen meidet
Zu ihrer Lust gekehrt.

*

Er ist weiter verbunden,
Und innigliche verwandt,
Und wird von ihr entzunden
Als unser Sit eines Brand.

*

Er trifft ihre edlen Tugen
Mit neugierlichen an;
Und sucht nicht Fleiss noch Mugen
Sie lernt zu seinen Nutz.

*

Die verschwiegnen Geschichten
Der finstern verjährten Zeit
Ist sie willig zu berichten
Mit freundlichkeit bereit.

*

Der Vorwelt Heldentaten
Verwahrt sein Andenken,
Und in die Nachwelt der Thaten
Strahlt ihren reinen Lichter.

*

Entrollt erst edlen Augen
Ein wohlbekannt Land,
Und gern kommt sie entgegen
Dem Werken reiner Hand.

*

Ihre Holden die Genossen
Begrüsst sie freundlich;
Und alle Flüsse schossen
Ihr silbern Schwestern zu.

*

Er pflegt des Goldes Strenge
In seinen Adern Hans,
Und schwarzbraun Deckerne
Mit edlen Steinen aus.

*

Zuer weicht er ferne dem Manne
Der gierig begehrten Ihrn,
Doch freundlich weich ihme wenig,
Wenn Blitz mit Freuden ernn.

*

Sie mögen sich erwärmen
Am Fuss wenn Eure wend Feld;
Er bleibt auf den Gebirgen
Der Hohen Herr der Welt.

*

Ich kenne ein festes Schloss;
Ein stiller König wohnt darinnen,
Mit einem wunderlichen Tross;
Doch steigt er nie auf seine Zinnen.
Verborgen ist sein Lustgemach,
Und unsichtbare Wächter lauschen;
Nur wohlbekannte Quellen rauschen
Zu ihm herab vom bunten Dach.

Was ihre hellen Augen sagen
In der Gestirne weiten Hallen,
Das sagen sie ihm traulich an,
Und kennen sich nicht satt erzählen.
Er badet sich in ihrer Flut,
Wäscht damit seine zarten Glieder,
Und seine Kleider blinken wieder
Aus seinem Mutter weissem Blut.

Sein Schloss ist alt und wunderbar,
Es sank herab auf steilen Mauren,
Stand fest und steht noch immerdar,
Die Flucht zum Himmel zu verwehren;
Von innen schlingt ein heimlich Band
Sich um des Hauses Unterthanen,
Und Weiten wehn wie Siegsfahnen
Herunter von der Felsenwand.

Ein unermessliches Geschlecht
Umgibt die fest verschlossnen Pforten;
Ein jeder spielt den treuen Knecht,
Und ruft den Herrn mit süssen Worten.
Sie fuhlen sich durch ihn beglückt,
Und ahnden nicht, dass sie gefangen;
Berauscht von trüglichem Verlangen
Weiss keiner, wo der Schuh ihn drückt.

2H2

*

*

*

Nur wenige sind schlau und wach,
Und dürsten nicht nach seinen Gaben;
Sie trachten unablässig nach,
Das alte Schloss zu untergraben.
Der Heimlichkeit ur mächtgen Bann,
Kann nur die Hand der Einsicht lösen,
Gelingts, das Innre zu entblössen:
So bricht der Tag der Freiheit an.

*

Dem Fleiss ist keine Wand zu fest,
Dem Muth kein Abgrund unzugänglich;
Wer sich auf Herz und Hand verlässt,
Spürt nach dem Kleinod unbedenklich.
Das seinen Hammer hält in ihm,
Vertreibt die Geister durch die Geister,
Macht sich der wilden Fluthen Meister,
Und heisst sie selbst heraus sich ziehen.

*

Je mehr er nun zum Vorschein kommt,
Und wild und bunter sich treibt auf Erden;
Je mehr wird seine Macht gedämmt,
Je mehr wird die Zahl derer werden.
Am Ende wird, von Banden los,
Das Meer die Erde durchdringen,
Und trägt auf weichen grünen Schwingen
Zurück uns in der Heimath Schoos.

*

*

To the Commissioner of Patents:

The petition of Benjamin Smith Lyman, of Philadelphia, in the County of Philadelphia and State of Pennsylvania,

Respectfully represents:

That he has made certain improvements in the way of making Iron and steel from ore; and that he wishes for time to make certain experiments in order to perfect the same, before applying for Letters Patent therefor. He therefore prays that the undersigned account of his invention may be filed as a caveat in the confidential archives of the Patent Office, agreeably to the provisions of the Act of Congress in that case made and provided; and that he may have the benefit of the provisions of the said Act, and thereby complying with the requirements of the said Act.

Philadelphia, 18 March, 1869.

[Dated some days after written]

Art of making Iron and Steel from the ore.

In order to make clear the new way of making iron and steel from the ore, it will be well to recall some of the principal points in the common process of the Bessemer steel process. The ore in such a furnace passes through four main stages. 1st In the first stage the heat is raised above 400° Centigrade, and the ore and fuel mixed

dried and then more or less reduced and broken up. 2d In the second stage the heat used is 1100° or 1200° Centigrade in a blast furnace, and the ore is reduced from peroxide & magnetic oxide, and from carbonate oxide & metallic iron. 3d In the third stage the heat used is 1600° Centigrade, and the ore begins to be carbonated and to soften or become pasty. 4th In the fourth stage not only the iron melts, but the earthy matters combine with the flux and melt too.

In the next way of making iron and steel there are separate chambers for some of these stages. 1st One chamber is used for heating and reducing the ore. This chamber is square inside, and has within it several rows of long narrow shelves, and these shelves, running the whole length of the chamber and having a double slope or roof like the letter A, and being movable in a swinging way on an axis at the top lengthwise of the shelf. The shelf may be made of fireclay, brick. The shelves are by linkages all connected together and connected with a little very simple clockwork underneath, by which they are all kept in motion, shaking back and forth, moving very slowly, so that all are backwards and forwards on their axes. The motion is given to the pendulum and clockwork by a weight that must be wound up from time to

Vessel through which the chamber is a compartment separated from the by a [illegible] hopper like openings answering [illegible] and [illegible] flanged at the or in a [illegible] [illegible] [illegible] to by it little by little [illegible] the [illegible] below, and be driven from a flame on the [illegible] above, and [illegible] by keep all the way the [illegible] the [illegible] [illegible] [illegible] for it [illegible]. It time taken up by the air in passing from the by the chamber to the bottom, [illegible] [illegible] by the [illegible] the chamber, but by the [illegible] of [illegible], by the [illegible] of the [illegible], by the amount of air in motion, and by the pressure of steam. This [illegible] [illegible] is [illegible], regulated by [illegible] of [illegible] [illegible]. [illegible] by of the Cut-off, and the [illegible] into the chamber at; [illegible] [illegible] and will [illegible] at the [illegible], and if will not by the [illegible] the [illegible] will thoroughly [illegible] it, and [illegible] the [illegible] [illegible] [illegible]

2° The [illegible] Retorting gallows which [illegible] [illegible] [illegible] [illegible] to the [illegible] of another chamber after [illegible]. The removal may either be made by [illegible] [illegible] field Chamber be [illegible] [illegible] from [illegible] [illegible] by [illegible] [illegible] [illegible] other. At the [illegible] [illegible] Chamber is to be in a vitreous state, heated [illegible] to [illegible] Cardigan. He or in using a [illegible] [illegible] and pulling from one [illegible] [illegible] [illegible] [illegible]

and then it is melted, with a sufficient proportion of alkali, or carbonate of soda, to form a fusible compound with the sulphur it contains. In order to do this, the ore is very finely powdered, and mixed with certain proportions of powdered charcoal and alkali, and then [illegible] in a reverberatory furnace, at a heat not exceeding that at which copper melts. The sulphur in the ore combines with the alkali, and with a portion of the iron, forming a fusible compound, which floats on the surface of the melted copper; but, if it be desired to separate the iron more thoroughly, by the addition of a flux, such as lime or fluor spar, or both, a double compound is formed, containing the greater part of the iron. The copper is then cast into ingots by pouring it into moulds.

When the ore contains much arsenic, the process would not be so simple. The first operation, in that case, would be to roast the ore, in order to drive off the greater part of the arsenic, and to convert the sulphur into sulphurous acid gas, which escapes with the arsenic.

The advantages claimed for this process are economy and safety.

1st Saving: a. In the first outlay, since the chambers may be constructed of wood. — b. In labor, as there is little or no manipulation required, and the fuel has only to be kept at a high heat for a short time, and no ground limestone is needed. — c. In fuel; for a poor quality of fuel can be used in making the ore

[illegible] and [illegible] having need therefor.

2d. Each and every [illegible] by [illegible] the whole work. The arrangement of the [illegible] of each chamber [illegible] controlled, as explained [illegible]

The advantages are especially great when the ore is to be [illegible] in a state [illegible] for the high blast [illegible] Rocky Mountain region [illegible] Rocky Mountain region [illegible] furnaces.

[illegible] I do not claim, [illegible] the [illegible] of the several [illegible] Chambers with [illegible] of the [illegible] of [illegible] the [illegible] of [illegible] and [illegible] combination [illegible] the several [illegible] and [illegible] apparatus as described are new.

Philadelphia, 16 March, 1864. Benjamin Smith.

[Dated added second day after writing]

City and County of Philadelphia,
State of Pennsylvania, ss:

On this [illegible] day of [illegible] 186[illegible], before me, the subscriber, an [illegible] personally appeared the within named Benjamin Smith [illegible] and made solemn oath that he verily believes himself to be the original and first inventor of the mode herein described of making iron and steel from the ore, and that he does not know or believe the same was ever before known or used; and that he is a citizen of the United States.

[Written, 12 March, 1864.]

135 South Fifth Street, Philadelphia, 12 March, 1869.

P. H. Raymond, Esq.
Editor of the Am. Journal of Education

Dear Sir:

I send you herewith in five envelopes a translation of an extract from Horatio on the [illegible], thinking that if you can give the space for it in your journal, it would interest a good many of your readers and perhaps add a little to the [illegible] of the article. The piece is certainly an interesting one, and I hope that the translation is [illegible].

Of course you will have to publish it, if at all, in several parts, as the [illegible]. If you should make but [illegible] it would [illegible] and [illegible] would be about the right length. It would be best to [illegible] at the end of [illegible]; if you could make [illegible] divided again about the middle of page 12, so that [illegible] a short one, scarcely any [illegible] would [illegible] seven or eight columns of [illegible] each.

[illegible] Journal, [illegible] shall come out [illegible] I leave the matter entirely to your discretion, with the special provision, [illegible] requirements. If you have any alteration to [illegible] kindly intimated it; and if you prefer [illegible] you are perfectly at liberty to do so.

The original German of the [illegible] with the translation in the editorial [illegible] in connection with [illegible] of which [illegible] began last year. If so, please [illegible] in which the translation is printed.

Please send me eleven extra copies of each number in which the [illegible] appears.

Believe me ever truly yours. [illegible] Lyman.

135 South Fifth Street, Philadelphia, 12 March, 1879.

Edward R. Hawley,
Conneaut, Ohio.

Dear Edward:

Your favor of the twenty fifth ult. came to hand on the second of this; and that same day I sent you my views as regarded the Taylor Statistics, the Urbin and Argyrion, and the next morning sent a letter by mail. To my acknowledgment has yet come from you, it seems likely either that both my letters have miscarried, or, what is more likely, that your answer has gone astray. Fearing that my unkind remarks in your letter instead of a post office memorandum as you had intended, and that it has been altogether right to withhold it would account for your silence without writing me, I forgive.

My family are all well, first rate. Hoping to hear from you soon, and as busy as ever, I remain

Sincerely yours.

Benj. Smith Lyman.

[illegible]

[illegible]

[illegible]

1354 Chestnut St, Philadelphia, 13 March, 1869.

Edward C. Howell Esq.
Attorney, &c.

Dear Edward:

Your favor of the eighth is this morning at hand, with its enclosure of Chief Justice Taney's letter. It was not forwarded until the tenth and that partly accounts for its not getting ... But my letter will be longer than I had expected. I hope it will reach you as soon as the one I wrote last night will, and that you will ... made arrangements on the subject of your letter ... I want again to speak about the Indictments ... the Attorney's Docket a daily until they are disposed of. That is for the present seems to be the most important.

I will see if I cannot send you a newspaper from here more than ... you wrote the changes in the Cabinet have been announced. Judge Black is a very strong man, and if it is a pity that he should seem likely to leave it before long. He was nominated but will be made Judge of the U. S. Supreme Court, but a newspaper yesterday said he was to go as Minister to England. They say that Attorney Smith may not have office much longer, both in case of the Democrats, & the District Attorney too. You know that I have not the least desire to ... in this business.

With best wishes Affectionately yours.
Benj. Harris Brewster.

135 South Fifth Street, Philadelphia, 15 March, 1869.

Dear [illegible]:

I received the tenth canto duly to hand, and I have also [illegible] Mr. Hartshorne's examination of Charles's papers proved to [illegible], and I trust that he is now in a fair way to be promptly [illegible]. I was very much surprised at seeing Lucie Chase's death in the papers, and I am sure you will be [illegible]. He and his brother were pretty near to getting Shepley Rotch's property, but [illegible] at Congress Street, but [illegible] are in such doubtful state, there is just [illegible], by making offers and [illegible]. I have not yet finally decided about Pottsville, but [illegible] in a few weeks [illegible]. I do not care very much about going up there until the [illegible] spring fairly starts, at which time I may perhaps [illegible] a long down walk there. But I should like to do it [illegible] at any rate to carry on this [illegible] I should have up, without absolutely [illegible] Particularly as I [illegible] up the office connection.

There is not much going on here to write about. We [illegible] meetings every Tuesday evening, the American Philosophical Society meeting on the first and third Friday evenings of each month, the Franklin Institute meetings on the third Wednesday evening of each month, the Pennsylvania Hospital [illegible] almost every Thursday evening, the Academy about every other Wednesday evening, and the Select Class every Saturday evening; and I have [illegible] Wednesday evenings left for visiting elsewhere or staying at home. The meetings of the German class have been quite small of late, ever since I have been trying to [illegible] with an exception. The two last were at Mrs. White's and were before Mrs. White's [illegible]. At the last one Miss Helen Irvine was there, quite [illegible] that we were old friends of Mr. Lesley and the [illegible] in Europe. This young lady was about seventeen years old when Mr. Lesley and Fanny were here three years ago, and then is rather a [illegible] Mr. Lesley had us all there one evening then.

ot, She has unfolded and is quite an attractive young woman. She
is not beautiful enough to be called handsome by any means, but has
such pleasing manners that make even the homely beautiful and
the beautiful grand. Her sister Kate is already handsome. Her mother
is said to be a woman of very good manners and this girl must
have been educated at the right time to catch something
of the good manners that are so common among the Continentals.
Hal Wilcox was one of the boys in Mr. Short's school when I taught
there a dozen years ago, but is now married, and has quite a nice
home at Stamford Connecticut, where he is employed with a firm in
the manufacture of clocks. This visit of his seems to have picked
up some knowledge of human nature, and settled pretty well, although
he did not turn out to be many. We came home Wednesday for the first
time since Christmas and was not there again until last week. At the last
meeting Saturday evening, we had over Miss Backus, a
lady from Bethel, who teaches Elocution in Miss Lockwood's School, but
is also a reader of no mean ability, and spent her visit, for the
pleasure of doing much good, and Miss Miller of Georgia, whose
picture you have seen in the illustrated edition of the Press newspaper
recently published. Hal has not left us a Calamity yet, but while
here, and at the first meeting Hal and I read over the
old Press publication relative to the Great Fire of Chicago. The
description is very bright and amusing, as it was written
while the scenes were fresh in the memory of the writer. Hal
left me with his father and
Mother and applied himself to the manuscript
and studied with an almost [illegible] earnestness. Hal
has a good method of not [illegible] at the present time in the case of his sister and daughter, so he gives a
fine chance to practice. At the end of the meeting I visited with
these two ladies home taking Miss Backus also at the
same time; the night was warm and fair and we walked
instead of taking a horse car. — Yesterday morning, Miss Hopkins
was so kind as to send me word by Dora that her mother Mrs. Hall
was to be at meeting that morning; so I went then, and had the
pleasure of hearing her speak. She spoke better and with more life
than I ever heard her before; but I have never heard her more
[illegible] before. She is certainly a very extraordinary woman. She had
her thinking cap on, and was very sharp. She spoke that day in such
a [illegible] manner, and with such [illegible] that I felt [illegible]
[illegible] my love to all. And [illegible] with her father, Mother, sister and
[illegible] Love to [illegible]

135 South Fifth Street, Philadelphia;
15 March, 1869.

Dear Koenig:

I left for you at your house this evening a number of the Manufacturer and Builder, but forgot to mark in it what I wanted you particularly to look at. That was a short article on the "Utilization of Tin Scraps". I only noticed it after you were here last, and thought it might possibly interest you. You can keep it just as long as you like; there is no hurry at all about returning it.

Very truly yours.

Benj. Smith Lyman.

[illegible]

[illegible]

35 South Eighth Street, Philadelphia, 15th Mar. 1859.

R. E. Rothwell Esq.
Editor of the Amer. Jour. of Mining.
New York.

Dear Sir:

Your favor of the 11th inst. is this morning at hand. I was right in guessing that Words were not answerable for the title "Lexicon of Mining &c." which I simply "Einfach Vorschlug". I do not object to its being "Handwörterbuch" if you suggest. I did not look for anything like a literal version, understanding (from your letter) that would give a pretty clear idea of the contents of the book. I have also no objection to your leaving out the "&c." from your description; nor to your putting "dumping pile" in place of "tip heap", if you think it a convenient word. I confess that I was not aware that "dump" was a mining word in England, as in Germany I found; and in your last rendering better in place of "Depot". But I have found "Tip" used and find it in a manner explained by the Dictionaries I consulted, and though "dump" is used in the Lead Mines of Wisconsin, it would seem to me less peculiar to mining than would matter of most railroad work. If the phrase "Not known where from" seems to you unfit to designate the ore in question, you may change it to "and the owners do not know where it came from". I hardly thought you would have become to regard "Educating" the Forest you would choose to take or reject the whole as a lump. There is no doubt whatever that you could make many improvements in it, but I have no right wish to take credit, or undeservedly for any portion of the plan that you would add. If you think it worth while to do so, you may print the piece without my name to it, and then you are at liberty to make any changes in it as you choose. — I am sorry to have disagreed with you about the phrase "Mining School", but still more sorry that your numerous readers can greet me as agreeing by an [illegible] with your views in the matter. Any changes you made in my letter last Spring were either unnoticed by me or struck me as with [illegible] at the time that me or quite unobjectionable. I do not remember. — I cannot understand why the fourth and fifth Sheet-Slips did not remain [illegible] with the rest and for this were sold printed together. If they do not reach you please to [illegible] and I will send them. I see that "dump" is used in the United States, is not? Very truly yours. [illegible]

1[illegible] North Front Street Philadelphia, Pa.

Mrs. Peterson,

Editor of Godey's

701 Chestnut Street Philadelphia.

Dear Madam:

Your favor of day before yesterday asking me for a [illegible] article is at hand, and I also to thank you for a copy of the first number of your magazine. I have nothing already [illegible] that would handily be available; but, if I should have leisure, I might perhaps write something for you, and it would give me pleasure to do so.

Very respectfully yours.

Benj. Parke[illegible]

35 South Fifth Street, Philadelphia,
17th March, 1789.

Mr. Benj. Chapman:

I will give me great pleasure
to accept your invitation to go with you to
a meeting at Mrs. Murray's tomorrow
evening. As you mention no time, I will
be at your house about half past seven,
since it may be necessary to reach Mrs.
Murray's punctually by eight. If that
hour is not right, please let me know.

Very truly yours.

Benj. Smith Lyman.

South Fifth Street, Philadelphia, January 29.

A. Edwards Esq.

Montgomery, Ala.

Sir:

Your favor of the 26th inst. is at hand, asking what I would require for you a geological examination of a tract of land near this city with reference to graphite, and on what terms, and how soon.

I should be happy to undertake such an examination as you probably wish for, and that will get from the nearest specimens, natural and artificial, as good an idea of the value of the deposit as they will yield; and I will do it for two hundred dollars, if you will furnish me besides with the needful information and subsistence from the time of my arrival in Montgomery until the work is done, not many days it is likely. I will bear my own expenses from here to Montgomery and from there back again. But I must ask that one hundred dollars of the fee be paid before I leave here and the other hundred on my arrival in Montgomery. I have no engagement now that would keep me from going at short notice, say a week or perhaps even less; and I should like to go, if at all, as soon as possible on account of the coming warm weather.

Very respectfully yours.

Benj. Smith Lyman.

[illegible]

[illegible]

[illegible]

135 South Fifth Street, Philadelphia, 24 Nov 1839.

Philip Isaac Esq.
73 Boulevard St. Michel
Paris.

My dear Sir:

Your welcome favor of the 23rd Sept. [illegible]; and I was sorry to learn by it that I should [illegible] the pleasure of seeing you as we had expected. I am glad you think so favorably of Massachusetts as a place [illegible]. I think you will find the climate quite [illegible] for a month or two in the spring, when the air and [illegible] is very disagreeable. I confess, however, that the climate of some parts of the South, say among the mountains of Virginia or East Tennessee, is more attractive [illegible] the cold and dreary one we are in this month: the society is still in a very [illegible] state, and much [illegible] you behind what there was already. If you should [illegible] you in Canada you will find the climate [illegible] Quebec is in a high latitude, and for [illegible] very severe; but Montreal is not. At Quebec invalids go to Montreal you will find a number of [illegible] there; and you will find a little more [illegible] for a [illegible] than is common in the United States; but in Montreal it will hardly be any. The climate of [illegible] and this country to live in. Write to Canada.

Personally I know more about Halifax than any other city in the
[illegible] and I am sure Kate or Parkman would find
[illegible] at home, in [illegible]
[illegible] Halifax. This is pretty [illegible]
[illegible] 30,000 inhabitants. Still, Canada
will [illegible] and must be annexed to the United States
some day. Their climate resembles ours and may become in time a
[illegible], when it is still more thoroughly
[illegible]. Already the interest of Nova Scotia [illegible]
[illegible] and [illegible] the Union closer to the United
States than it [illegible]. But we must be cautious about
adding to our territory too fast and ought to settle [illegible]
[illegible] before planting them. Cuba seems likely to
come to us soon, and Mexico before very long. It has
long been natural for Americans to look forward to the time
when every part of North America
will belong to the United States. So you see what you are coming
to.

Should it [illegible] that I may have to go to Alabama on pro-
fessional [illegible] within a week or two, and may be kept there
some time perhaps; but I hope to be in the North [illegible] by the
time of your arrival. — It is very kind of you to offer to bring
me books and the like; and if I should think of anything with-
in [illegible] you about I will make bold to let you know.

I have also to thank you very much — the excellent ph
[illegible] together with yourself that you enclose; and in return I send you mine.

I remain my dear sir, as ever,
Yours very truly,
Benj. Smith Lyman

[illegible] was really astonishing, [illegible] Office Bookkeeper and the Clerks [illegible] that they really attend to [illegible] What may they [illegible] are women. [illegible] you [illegible] her speeches would be extraordinary [illegible] hymn book and it [illegible] Mrs [illegible] Hay, in commendation [illegible] Perkins [illegible] Perkins act. - This time, I did not [illegible] take the trouble [illegible] Miss Dyer [illegible] to go to Queen's Meeting [illegible], for I was [illegible] very much [illegible] had [illegible] before that Thursday [illegible]. She took me with her a week or two ago [illegible] to Dr Snyder of a private house, a neighbor of mine at [illegible] reading that [illegible] a Rat, Consumptive [illegible] Thursday [illegible] for his milk, and getting some money [illegible] in this way in [illegible] Los Gladiators who will [illegible] to kill us & [illegible] Mr Howells is a very poor reader [illegible] selections were [illegible] reading. She [illegible] has called a "Morning Call," which has [illegible] been; but Miss Dyer [illegible] would like it [illegible] at Cambridge. I [illegible] think it would be a good piece for [illegible] one of the Entertainments [illegible] as it is very witty and needs but [illegible] three actors at most and might easily be adapted for two, one [illegible] lady and one gentleman [illegible]; and there is some foreign [illegible] in it. [illegible] I believe I told you at [illegible] Mrs Lyman's [illegible] for a new Entertainment [illegible] reading of Miss Dewey. [illegible] Miss Dewey's cousin) and her Visit [illegible] last [illegible] surprised me [illegible] Tuesday morning by calling on me [illegible] at my [illegible] office. [illegible] It was [illegible] a surprise because she had [illegible] not [illegible] been, as [illegible] she had promised [illegible] to come [illegible] and [illegible] spend [illegible] the [illegible] day and [illegible] dine [illegible] with me [illegible] at home. [illegible] Mr Hayes [illegible] Tuesday evening [illegible] I went with pleasure, and [illegible] found [illegible] Miss Hallowell [illegible] there [illegible] whom I mentioned before (Old Probs) [illegible] as [illegible] was so much admired [illegible] "sending me to take a look at [illegible] Miss Dewey before [illegible] engagement [illegible] was [illegible] satisfactory [illegible] with [illegible] result, Mr & Miss Dewey [illegible] Mrs Hallowell [illegible] and [illegible] two [illegible]. Miss Hayes [illegible] entertained me by telling [illegible] of the [illegible] acting [illegible] before in private theatricals [illegible] at [illegible]

[illegible] Wednesday [illegible]

[illegible] and Mr. Dodd [illegible]

[illegible] coming in dressed as an old woman from [illegible]

[illegible] Paris, and rather [illegible]

[illegible] present. [illegible] first about [illegible]

[illegible] and we danced a little at [illegible]

[illegible] paid [illegible] place we went at the theatre [illegible]

[illegible] like. This morning [illegible]

[illegible] evening [illegible] Ladies [illegible]

[illegible] Tuesday [illegible] Philadelphia [illegible]

[illegible] has not come out [illegible] this week. [illegible]

[illegible] with an [illegible]

[illegible] the [illegible]

[illegible] laugh [illegible]

[illegible] my [illegible]

[illegible] Parson [illegible]

[illegible] this evening [illegible]

[illegible] lady and [illegible] the Theatre [illegible]

[illegible] Opera [illegible]

[illegible] Mad. M[illegible] [illegible]

[illegible] very much

I [illegible] I shall have a little work to do in that [illegible] I shall [illegible] perhaps this [illegible] perfect rest [illegible] I am glad of the [illegible] for this [illegible]

Mr. Delano was here yesterday and night [illegible] will be in next [illegible] as he did when he [illegible] or more ago, more [illegible] perhaps with his [illegible] off. He had a [illegible] I [illegible] I pick [illegible]

[illegible] Philadelphia, 29 March

Dear [illegible]

[illegible] favor of January 1st [illegible] had [illegible] to express [illegible] now be quickly cured also [illegible]. I am sorry to see on [illegible] this morning's Weekly Republican [illegible] with regard to [illegible] ago. No Concert [illegible] and it will be [illegible] time I have seen [illegible] Lizzie sings in a couple [illegible] same programs before; perhaps [illegible] would. I suppose you are enjoying [illegible] very much. [illegible]. I hear through Mrs. Jackson of March that [illegible] married their cousin Miss Nellie Rogers in [illegible]. I had the honor of a visit from Mrs. Reed. They [illegible] got in from [illegible] at Kinsman [illegible]. I went and saw their visitor Miss Reed [illegible] very bright young woman, and her and the Yorkens [illegible] Miss Dewey, Schoolteachers [illegible] were teaching [illegible]. Miss Rogers amused us very much at one [illegible] in Bible and character. Jan [illegible] from Newburyport, was [illegible] Mrs. Jackson [illegible] her. He rattled off most rapidly in the [illegible] [illegible] came next and [illegible] about [illegible] when the [illegible] and afterwards told [illegible] portion of [illegible] Rice & the [illegible] Mrs. Rogers. He [illegible] whole had a [illegible] & [illegible] acted in [illegible] at Mrs. Jackson's, and she must be a good actress [illegible] She is very [illegible] and [illegible] [illegible] very much acquainted with [illegible] Dr. Rice from various [illegible] most flowery accounts of his [illegible] [illegible] & [illegible]. Mrs. Miss Dewey's [illegible] but no near connection [illegible] although they came from [illegible] [illegible] their parents did. — Evening [illegible] meeting of [illegible] but as there are [illegible] or four German ladies who come it gives us who do [illegible] a chance to [illegible] — Last Saturday I went to Mrs. [illegible] Esqr's, who is, or was, [illegible] younger sister, a pretty

from Germany from Kentucky in [illegible]. Miss [illegible] Kenyon is a
boy! and [illegible] with [illegible] [illegible] [illegible]
[illegible] [illegible] been studying [illegible] [illegible]
or 20 and is now about to go home with [illegible]! Miss [illegible] the
man was from [illegible]; the [illegible] teacher in Miss Graham's [illegible]
have been with [illegible] Commander [illegible] and [illegible] with
her in Brandywine and said [illegible] from choice. We had
a table together and [illegible] from the rough complicated Germans
into the changing French, which [illegible] Miss Buchanan said she had
been here but eight months, [illegible] but she was at Worcester
teaching for [illegible] three years, [illegible] before that three years at
[illegible] in Miss Russell's School, and had been
at Northampton [illegible]; and asked after
them. She had also lived perhaps in Boston. She thought a great
deal of [illegible] the country, and liked it better than this,
which shows her taste; but she has not been able to make many
[illegible]. She has not perhaps yet found out the fact that
education here all they are
in Germany [illegible], but looks upon teaching as a kind of servant
or working people of a rather inferior order.

I think it very likely that I may have to go to Montgomery,
[illegible], may remain to do some good public work in that neighborhood; and
[illegible] [illegible] [illegible] object that although I go for a
[illegible] while I may have some definite work to do there. I
should go [illegible] [illegible] a week or two days.

It seems [illegible] to them as if we must draw in Mr. Sedgwick
for the [illegible] as he is quite green. It has grown very green in
the Park [illegible] days within a couple of days. Yesterday
and the day before [illegible] mild days, and all ladies were to be
found [illegible] out enjoying the day yesterday for doing [illegible]
[illegible] and flying as it is customary to do here on
Easter Sunday. It is very [illegible] again but not cold. We
[illegible] yesterday in the Square the Superintendent of [illegible]
lately appointed in charge of [illegible] with the Commissioners [illegible]
[illegible]; so we had the singing [illegible] you have probably [illegible].
Mr. Delano was here last Thursday night and Friday, and
the pleasure of [illegible] with him [illegible]
besides. He seemed well but [illegible]. [illegible]
[illegible] my best [illegible]. Your affectionate [illegible]

125 South Eighth Street, Philadelphia, 29th March [illegible]

My dear Sandborn:

[illegible] This week's Republican came & the other [illegible] no doubt owing to the unusual [illegible]. I noticed several items about [illegible] have not quite equalled the [illegible]. I believe I [illegible] could write [illegible]; and at [illegible] a long letter in which he [illegible] would [illegible] from the [illegible] during [illegible]. He is under the treatment [illegible] in Boston, and now looking very decidedly [illegible] by Dr. Rockwell. [illegible] for [illegible] congestion of the [illegible] caused by [illegible] I noticed nothing [illegible] Mr. Ingram said of [illegible] and was pleased [illegible] I had called [illegible] but I was very tired [illegible] needed [illegible] rested after [illegible]. The [illegible] is afflicted, and [illegible] needed [illegible]. I have told [illegible] will great [illegible] Williamsburg [illegible] to Philadelphia [illegible]. [illegible] I [illegible] that [illegible] would have said [illegible] that [illegible] mind of [illegible] and I found [illegible] Mr. [illegible] could have [illegible] the [illegible]. He is [illegible] [illegible] [illegible]

...he talks very much of you. He is in the yesterday morning and left very freely. He is now in good health and [illegible] restored from the [illegible] of a year or two ago. He does not [illegible] any longer on [illegible], but on the Pacific coast; but I see him pretty often at this office and mine, especially on [illegible] mornings and has taken a lively interest in my numerous projects and inventions. Nibbling, in fact, he is a real source of [illegible] to me. I wrote a little while ago a translation from Arvalid's unfinished novel called Gravey of Pisadingen, and the [illegible] at first before long in the Knickerbocker Journal of Mining where Editor Headley had it a great while. It was [illegible] and then published in book form. This is about mining and quite interesting in its original [illegible] of [illegible]. I expect to read again soon as you do not see the paper. You are so kind as to inquire after the [illegible] and [illegible]. You would laugh if you knew how little I [illegible] have gone down on to paper, and it is hard work while [illegible] attention to it by a paragraph. One of the best if not the very best [illegible] on the subject was announced at Leipzig a fortnight or nine years before it appeared, and now looks a little [illegible]. My violent literary efforts will very likely be [illegible] by a call to the field, namely, to Alabama. The country talks of [illegible] a good deal but work behind it. I am now in daily expectation of hearing something [illegible] affair. It will probably take me only ten days or [illegible] time. This is likely, but I hope for longer sampling me. It will be a pleasant trip there and back by way of [illegible] a reminder of my journeys in the South a dozen years ago. I was in Montgomery [illegible] at such a reception as the [illegible] home to me. Old reputed [illegible] Abolitionist. The [illegible] getting me to go down there is a perfect [illegible] in this state and I [illegible] from this city. It seems to be [illegible] time for big [illegible] and lands in the South, and [illegible] will be immense. [illegible] public [illegible] very [illegible]. In six or eight years [illegible] as [illegible] will [illegible] some satisfactory time, and all the [illegible] things must go well. [illegible] after [illegible] I had an invitation in writing from "Fannie Barmer" to write a [illegible] tale" for her magazine "The Rural" just started here. Knowing [illegible] and [illegible] I [illegible] more [illegible]. [illegible] among the [illegible]. [illegible] R. Stillwell [illegible] and her sister, [illegible] [illegible] meetings of some of my friends or [illegible] [illegible] of yours. Yours truly [illegible]

delay

and

End

To find the circumference of an ellipse.

To find the circumference of a circle the rule is multiply the diameter by 3.1416 and the circumference of the ellipse by

$$1 + \frac{1}{4}\left(\frac{\text{difference of axes}}{\text{sum of axes}}\right)^2 + \frac{1}{64}\left(\frac{\text{difference of axes}}{\text{sum of axes}}\right)^4 \text{ etc.}$$

To complete an ellipse whose axes are 10 feet and 6 feet respectively we have

$$\text{sum of axes} \times 3.1416 \times \left(1 + \frac{1}{4}\left(\frac{4}{16}\right)^2 + \frac{1}{64}\left(\frac{4}{16}\right)^4 \text{ etc.}\right) = 8 \times 3.1416 \times \left(1 + \frac{1}{64} + \frac{1}{4096}\right) = 8 \times 3.1416 \times 1.015625 = 25.4469 \text{ feet}$$

completing all beyond the [illegible] 25.447 feet. By the rule given the circumference is found to be 25.45 feet. The difference between the two results is so small that the ellipse may be considered a circle, and the difference in the circumference will be so small that it may be neglected.
